> > You may "think" anything you care to.
>
> And with your permission, I think you are a liar.

You may think anything you care to.

Proving it's another thing.

> No. You made claims of holding a MARS leadership position, and you
> have demonstrated an intense ignorance of MARS. It doesn't add up.
> New layers of claims are not valid verification.

There's no "layers of claims".

And you have yet to prove this alleged "intense ignorance" of
MARS, N/MC, AF >>OR<< Army.

> I ask for authentic documentation of your claims. Got any?

I gave you more than you've ever provided me on YOUR assertions...

And MINE are verifiable.

> > YOU, on the other hand, have NEVER answered a single one of
the
> > questions put to you by myself, Dave K8MN, Jim N2EY, etc. Not a
> single
> > answer HERE, let alone any "documentation".
>
> A lie. Yet another Robeson lie.

Nope...No "lie"..."Robeson' or otherwise.

> Nope, you guys needed papers, Steve. Papers. Papers from my
Commander
> and/or the United Nations, and papers from the ARRL for DXCC.

We've asked you for names, Brain...Some verifiable credits...Even
the callsigns of some stations you "worked" from T5...

Nothing.

> And so you have labeled me a liar and coward...

No...YOU have labelled yourself a liar and coward...By virtue of
lying and cowardice.

> and have made inuendo
> that I am a gay man and a pedophile.

No...YOU have made comments that were suggestive of "alternative
lifestyle" choices.

You don't pay attention to what you say, how you say it and the
context in which you say it.

> So where is your documentation? Without documentation, wouldn't that
> make you a liar and coward, a gay man and pedophile???

Nope.

> Steve, can you stand up to the standards that you have set for
others?

I already have.

I told you I was in MARS.

You said I wasn't.

I gave you callsigns, dates, times and places.

You can either "make the call" and determine the validity of my
claims or not.

Doing so will show you that I was truthful...Again...

NOT doing so will only show that you are the coward that I claim
you to be.

So far that is the option that you seem to favor.

I guess you figure it's easier to take the slapdown you're due for
that, than having to admit that I was being Quitefacctual.

> I guess not. Other than being a documented liar, I won't hold you to
> the other names that you've applied to me. This is the conclusion of
> another Robeson tragedy. Case closed.

There's no tragedy "here", Brain, other than the one marked by the
passing of yet another May 16th.

The only thing "documented" here is my dogged determination to rub
your nose in your continued deceit and mistruthfulness.

And you're certainly giving me a lot of opportunities to work
with!

Yet ARRL has significantly altered their position...per
their filling for rules changes to the FCC that would ONLY
retain a morse test for Extra. I still disagree with ARRL
as to the need for ANY test, but ARRL certainly (IMHO)
is no longer hyping Morse to the extent you suggest.

>>
>>Your point?
>
> "Point?" What "point?" I asked "how many morse code operators
> are there in radio in the USA." [I didn't restrict that to just
> radio amateurs]

OK, for argument sake, let's say there are 1/3 million morse
code operators in the USA (hams and anyone else). Now
what's your point?

> One in three Americans has a cell phone subscription. It's a
> safe bet that there are at least 100 million cell phone handsets
> operational now. Hams are outnumberd by cell phone users at
> least 100:1.

Nothing new there.

> Again, according to the U. S. Census Bureau statement (of 2004),
> in 2003 at least one in five Americans had some kind of Internet
> access. That's roughly 60 million Americans. The Internet
> enables all instant communications with every continent except
> Antarctica. Was "good publicity" responsible for that?

Good publicity, new technology and very cheap internet
access and/or cellphone ability is why 60 million folks have
internet and/or cellphones today.

> Twenty years ago neither of those cell phone or Internet statistics
> could have been stated. Suddenly (after 20 years) there they are.

Suddenly? 20 years isn't suddenly.
Other new technologies have seen similar relatively
short periods whereby they overcame existing
technologies:
CD over records - about 5 years
DVD vs VCR - about 5 years
Autos over horses - about 30 years
TV over Radio as prmary home entertainment - < 10 years

> Morse code has been around for 161 years. It was once the only
> means possible for "instant" communications anywhere. No longer.

So what? It is used and liked by many hams...that
is their choice. Their use nor their being proponents
of morse use has NOT prevailed with the FCC
regarding the morse test (per the 4/2000 new rules)
except at the time retention of a 5wpm test for HF
access per then international treaty requirements.

The international treaty has changed and eliminated
any requirement for morse competency by hams
with HF access...BUT the FCC has not yet acted
upon that international change...BUT when the FCC does,
I have every belief that all code testing will be dropped...
regardless of what ARRL or any code test advocate has
or will say.

> If morse code was so "good," "so triumphant" why
> didn't it survive and grow?

It isn't an issue of good or not. It is now only an
issue of test or not. Those that want to use and advocate
use of morse to others are free to do so. Advocating
USE is not advocating need for a test...a point also
recognized by the FCC in the past.

Cheers,
Bill K2UNK

> them off.

If they exhibited their typical condescending
mentality or mannerisms like they do to the paying
dealers/vendors in the outside flea market, this would
not suprise me at all. I'd not even donate a cheap prize
pair of dollar store headphones. BTW we really liked the
condition of the dealer's parking lot this year!
The blacktop of the Hara Arena reminded me of a
cross between the Lunar landscape and the San Andreas
Fault in some places. As someone on the live chat
commented quite accurately: '..the Hara should rent out
their parking lot to Range Rover for Customer Test Drives
during the weekdays'.

> Also I would say that both the flea market and the
> inside vendor numbers were down by at least 20%.
> There were MANY empty spaces in the flea market
> area when in past years it was mostly full.

Year after year less and less sellers. I attribute this to
e-Bay, the cost of selling at the Hamvention and the
ever diminishing returns. 9:00 AM on Sunday was
positively dismal. I would say that fully 40% of the
outside Vendors packed up and left on Saturday night.

This year was our last, Dayton is just not worth it anymore.
Better to sell it online and have the UPS Truck
come to your house and pick the stuff up for
delivery instead of carting it 500+ miles just to bring
it all back home rain dampened again...

> I also heard that Mendelson wanted more space and a break
> on the flea market rental since they are going out
> of business. The Hamvention, based I what I heard
> around, said no dice, so they didn't even bother
> to show up and they're only a few miles from the
> arena too.

We heard the same story making the rounds
among the dealers on Saturday. Probably true.

> They spaced out many of the inside
> vendor booth areas so it wasn't too obvious that
> the number of vendors was way down.
> What did anybody else notice? I hope the above
> isn't a long term trend.

Those spaces were a combination of that and
a small number of dealers who decided not to
go at all the last minute. The hamfest committee
was hoping that alot of people would show up
and pay for a space...like that was going to happen. (!)

I also saw several tables of 100% cell phone and computer
junk which was a major disappointment. I would be
rather PO'ed also if I paid $40 to get in and I saw
standard flea market type vendors selling stuff that
I could see, at any weekend mart FOR FREE and
with no admission charge!

Forget it folks..
IMHO Dayton is finished, stick a fork into it.
It will never go back to what it once was Years ago
despite all the marketing and hype that they make it.
Oh there will always be the camaraderie and the new
equipment showings, but the flea market is just about finished.
Stick to hamfests located with 30 miles of your QTH.

I agree. It looked more like a drive-in rummage sale than a hamvention at
the outside vendors booths.

"Johnny-Come-Lately" ?!?! By any measure you care to use, you are decidedly junior to me in both TIS and TIG. Get used to it, boot!

But back to "so what" ... You call Todd a liar for signing a post "Todd O'Dochartaigh N9OGL".

By that same measure you are "lying in public" (your term) when you sign a post "Steve, K4YZ" since FCC records do not show anyone named "Steve" as holder of the call sign K4YZ.

If it was so bad in years past, why did you go this year. My last trip to Dayton was about 1995 and my impression of the used equipment for sale outside was that it had been carted between too many other hamfests. And there was a surprising amount of non-radio electronic gear and parts. The inside was the usual glitzy trade show and one vendor actually had bikini clad women prancing around.

In my experience hamfests in general are showing lower attendance because of both internet-based competition and the ham radio hobby itself being on the far side of the growth and maturity curve.

In the Hamventions defense it's not their fault as to what is brought inside for sale. They're probably trying to do the best they can to put on a good event.

Agreed, most stuff is going to eBay these days, and no problem with that. Can't really fault a seller for wanting to move his/her equipment rather than waiting another year for Dayton.

I've seen the same here even with local fest's over the last number of years.

Yeah. You'll find that question pool bugaboo in a lot of fields these days, including fields where if a person makes a mistake because of not knowing the material, lives may be lost.

> There were study guides with sample questions, but no
> questions pools with the exact answer available for memorization.

Now if you want *really* hard, make it no study guide, no question pool, and the applicant has to do all the learning research with NO idea of what is on the test! 8^)

> If you
> did not know the theory, then you probably weren't going to pass.
> Again john smith knows not of what he speaks.

I took the tests from the question pools. For me, they were all pretty easy. They were not easy because of the question pools. They were easy because they were fairly basic material.

What I have seen of the earlier test is that they too were pretty basic. Any difference is not so great that those who came before need not feel any superiority.

I aced the Technician test with the only study being the safety questions.

I did study a bit for the General.

For the Extra, I spent a week taking the on-line tests. Questions that I knew the answer to, I got right of course.

Those that I got wrong earned me a trip to the books or online to find out why I got it wrong. By the time I was finished, I aced the test just about every time on line, and then in the actual test.

And I knew the material.

Elapsed time, one week.

Now the Morse code was another thing entirely. That was hard.

But then I'm just a dum nickel extra! ;^)

So my lower class license makes me a cb'er? Never owned or operated one toad. You're wrong, the tech license used to be the general theory with only 5 wpm code, so the license would say Technician. When they dropped the code requirement to 5 wpm, all that was required of a tech licensed prior to, I think it was 1987, could upgrade to general with just some paperwork. So see toad, you're talking out the side of your face and you don't know what the hell you are saying! So my being first licensed in 1984 make me have more time the you the illiterate idiot! Hmm, That makes you the gay porno queen cb'er pirate parrot.
You're such an idiot toad, I told you my class of license, you didn't figure it out on your own.
So toad, I've been licensed longer then you and have the same theory as you, I have more education then you'll ever have, from a university, not the Gaylorville certificate club.
In YOUR opinion, that makes you the illegal cb'er.
Any more lies to make you feel superior?
BTW, how's the boys down at the flower shop? Did you ever wonder how I found out that you hung out there? When are your FBI buddies getting back to you, soon I hope!

> itself being on the far side of the growth and maturity curve.

Now you've hit on something. I wouldn't doubt that a lot of people who are "fed up" with Dayton are just tired of the whole hamfest thing in general.

I've been going for three years now. There were less vendors this year than last. But there was less crap than last year also. And a lot of the crap that went missing this year was the people selling ancient computers and old HT junk. If you wanted ham radio items, there was plenty to be had. And I'd rather have fewer vendors selling more ham radio equipment than more vendors selling IBM XT's and Old Handi-talkies that some Fire department got rid of in 1990.

Interesting that with the high prices that Collins equipment has been getting lately, a lot of them came out of the woodwork. I would suggest that anyone collecting them keep their eyes open for good deals.

Wrong, for the general class required 13 WPM morse code, it wasn't
until recently that they changed the rules. I got my General in 1993
and had to have the 13 WPM Morse code. Taylorville does not have a
university or college, The college I'm going to is in Springfield right
next to the University of Illinois, which I went to back in 1988. So
I've been to both a college and a university. There are no flower shops
here in this small town gaylord.....again please focus your angry and
sexual frustration on something more creative.

What is simple is Silly Gunny jumping to conclusions. Go back to the
first "bb" posting above and notice that it is >>>NOT<<< my account.
So thanks for trying "reeeeeeeeeeal hard" to point out >my< error.
Idiot.

Unless you were on a commercial aircraft that made a forced
landing there, you are there by your own hand having volunteered for
service in the Armed Forces.

Your siutation is not of anyone else's doing but your own if
you're not happy. Or are you on of those "I didn't enlist for this...I
just wanted the money for college..." people?

BTW...How come you have the guts to go in REAL "harm's way", but
you haven't got the cajones to sign your real name?

I have a "use for CW". I use it to communicate with others using the same mode. I use it to participate in Amateur Radio.

If you or your ilk don't care to do so. Stay the hell off my frequency.

Have a good day idiot.

"Falls apart"...?!?!

You'd like to think so, I guess.....

An abbreviated FIRST name is a commom familiarity in American
communication.

A completely different LAST name is an "alias".

Or that's how law enforcement sees it.

Ok toad, Last time, read very slowly. Yes the general was 13 wpm, but in the late 80's there were no tech/no code, at that time the tech was, now take a deep breath, General theory but the novice code of 5 wpm. Got it so far? In the 90's the Tech test was lightened. You're right again, it wasn't until recently that the rules were changed to 5wpm for all license classes. Now read really slow, when the code requirement was lowered, the Tech's that had taken the general theory but only had the 5 wpm code were grand fathered into Generals, if they filed the paperwork, this was because they had passed all the requirements to be a general.
So you know how you type in caps with all the profane language?
()%^#H#H$%^#H#H$%^ @#%&(**(^%%#$.
Get it yet idiot? Just because somebody is a Tech today doesn't mean they are no code. So now that I have pointed out that you are stupid and a liar again, I'm done with you, you are too lame to understand and too gay to care!
I've had my license longer then you and I've had more education then you'll ever have. Taking a course at a collage isn't the same as a degree, and you'll always be the GAY ILLITERATE IDIOT.
There is no arguing with an idiot like you, your mind is so small that it's closed to any real facts, you don't know what reality is and you lie all the time. You can't afford an apartment, you can't afford a windows machine you aren't an appliance operator, but you have the best home built station that money can buy? What an idiot.
You've never answered 1 question toad, all you do is turn everything upside down and echo statements of other people, you don't have a thought of your own!
Be watching for me, coming to a town near you very soon!:)

Mike,

I believe what the gentleman was trying to convey is that the present day tests are a total farce. The answer is readly available and it is just a "formality" to even pass it.

You said you compaired some of the older tests. Just how far back did you go? The commenter was obviously refering to those tests given in the 50 and 60. I like to call it the error of "BB" . You know....before Bash. If you don't know what I am refering to, then you had no right to comment the way you did.

Have a nice day.

I'm no old-timer. In ham years I'm a young pup. I've been licensed
less than 20 years to prove it.

What Steve (or any other person) did or did not
> do in service to this country is none of your business.
> Nobody owes you an answer to anything.

Ordinarily, I would agree. However, Steve has demanded such
information from myself and others. What I have done is placed his
demands and his rules back on him. He squirms in his new role.

> It is probably just as well that Steve didn't bump into you at
Dayton. You
> would have had to walk all the way back to your car to change your
Relys.

Welp, he was the one who set up the meeting. I didn't feel right about
meeting up with a disabled veteran; apparently it was his long felt
desire. But where the rubber meets the road, he got a flat.

So my lower class license makes me a cb'er? Never owned or operated one toad. You're wrong, the tech license used to be the general theory with only 5 wpm code, so the license would say Technician. When they dropped the code requirement to 5 wpm, all that was required of a tech licensed prior to, I think it was 1987, could upgrade to general with just some paperwork. So see toad, you're talking out the side of your face and you don't know what the hell you are saying! So my being first licensed in 1984 make me have more time the you the illiterate idiot! Hmm, That makes you the gay porno queen cb'er pirate parrot.
You're such an idiot toad, I told you my class of license, you didn't figure it out on your own.
So toad, I've been licensed longer then you and have the same theory as you, I have more education then you'll ever have, from a university, not the Gaylorville certificate club.
In YOUR opinion, that makes you the illegal cb'er.
Any more lies to make you feel superior?
BTW, how's the boys down at the flower shop? Did you ever wonder how I found out that you hung out there? When are your FBI buddies getting back to you, soon I hope!

These clowns have no problem denying amateur privs to people who cannot attain 5, 13, or 20wpm rates. I wish to set the bar higher than they can attain and deny privs to them. That is all.

Hello "George"

Old farts? I resemble that remark :))

Enjoy Kuwait; I enjoyed Vietnam for 11 months ;)

Be happy you aren't in Iraq.

With all due regards,
Jim AA2QA

I disagree!

They're both highly useful. Just in different ways.

> If one
> needs to send a lot of text, a computer and the Internet just
> might be
> considerably faster (assuming one can touch type at a

Of course! But then you need a readout device.

Usefulness depends on the application.

> Via
> radio, there are digital modes, of course, and text can be
> reliably sent
> much faster with many of the digital modes (even the very dated
> RTTY).

Sure - if someone has the equipment handy.

But the whole digital-mode-faster thing is kind of bogus in my view.
It's like saying that since we have cars, there's no reason to have
competitions where people run anymore. Heck, why doesn't everyone in
the Olympic marathon use rollerblades? The times would drop
dramatically.

>

The telling part is that the anticode folks call the test "rigged"
and other nonsense in an attempt to discredit what happened. But
the plain simple fact is that a couple of good Morse Code
operators, going about 1/3 the world-record speed, were faster
than the *world record holders* in text messaging.

What they missed is that the whole point of the segment was to
show that "newer" isn't always "faster/better/easier" and that
"older" doesn't equal "useless". The outfits on the two teams
were a visual way of adding to that.

One member of the Morse Code team was reportedly at Dayton
in his telegrapher outfit.
>
> I'd have responded earlier, but yesterday was my birthday
> and .... well, I

Hope it was happy. Trouble is they put beer in aluminum cans now...

Hello, Hans

Well, when I was really fairly good at Morse, I copied 40 words per minute
with no errors in Bainbridge, MD in "A" school.

Many folks forget that digital modes (and lets include cw for this one) are
relatively errorless despite numbers and spellings that are difficult.
There are a number of folks that would have problems typing 30 words per
minute, let alone 50 for a really good CW op. A teletype or even the modern
modes aren't going to help (even the Internet) if you can't type well. Some
people think that because they can "cut and paste" or forward a message that
makes them some kind of superior communicator.

The name of the game is to have fun - and, if you are intelligent, be
prepared.

What kind of tuner did you use for that fence (read "antenna") on Saipan?
Man, you were pounding in. Too bad the folks at the receiver site didn't
understand about reducing rf/if gain LOL.

Difficult premise, coupled with a fuzzy definition. What does "dying"
mean to you? If you're going to assert that amateur radio is dying,
then you need to come up with a working definition of "dying" so that
others can decide if you're right.

My problem is that, when I review the statistics, there isn't any such
process which can be clearly identified. True, over the very recent
past the total number of licenses has declined, but that decline is on
the order of 2% since April, 2004. If the baseline is made longer,
and totals going back to 1995 are examined, a 2% change in the total
amateur population is seen to lie well within the noise (two year
variance). It is therefore difficult to decide if it is significant
without resorting to a detailed statistical analysis.

My sense is that it isn't significant (yet). It looks as though the
trend line (least-squares, linear fit) is horizontal, and only
additional time will tell if it really has a negative slope.

To reiterate, those who run around claiming that "amateur radio is
dying" can't seem to either articulate what "dying" means or to prove
their case.

And as the old Shania Twain song says, "That don't impress me much."

Bwahahahahahahahahahahahahaha!

Alias, schmalias! As if "law enforcement" gives a rats patoot about how Todd identifies himself on rrap?!?! Unless he's trying to obscure his identity (he's not) for purposes of illegal activity (nothing illegal about posting on rrap) he's free to use whatever identification suits his fancy, or he can choose to be completely unidentified.

And if it suits >>your<< fancy you can identify yourself as "Steve" here on rrap even though FCC records don't show anyone by that name holding the callsign K4YZ.

I'd ask you to prove otherwise, but you're as bad as Lennie and
Brain about "showing your work".

> Alias, schmalias! As if "law enforcement" gives a rats patoot about
how Todd
> identifies himself on rrap?!?!

I didn't say anything about what law enforcement thinks about
Todd, Hans.

I said that law enforcement considers representing one's self with
a different name to be an "alias".

> Unless he's trying to obscure his identity
> (he's not) for purposes of illegal activity (nothing illegal about
posting on
> rrap) he's free to use whatever identification suits his fancy, or he

Loved your book, 1984. Didn't think you'd still be kicking.

So have you done any hamming in Kuwait? Need anything?

Yaesu was not in the same arena with Icom and Kenwood, either. Don't recall if it's always been that way.

> Also I would say that both the flea market and the

Hello, John

I suspect that Morse testing will be dropped. When, I'm not sure, but some countries have done so already. I honestly believe (but could be wrong) that most of the older amateurs (say the 20 wpm extra gang of which I am one) do not believe that Morse should be required.

Hopefully, that will end some of the contention amongst some of us. The reality is that amateur radio does need some infusion of young blood. Having just celebrated my 58th birthday, I can appreciate that LOL.

There are a lot of different forms of communication. I suspect that some people will be attracted to amateur radio simply because of the vast amount of experimentation that can be done at reasonable powers (you don't need kilowatts, but a few milliwatts may not suffice).

I've been moderating one Yahoo group (and now co-own it) which is devoted to helping folks get their tickets. The biggest thing is not to have the hams flame the cbers or scanner enthusiasts. We are all interested in radio (or television - or other modes, for that matter) and the flame wars are the biggest deterrent (not Morse code), at least in my mind. Flame wars do *not* happen. Moderation until folks calm down and removal or even banning if they continue. There are too many good folks in cb and amateur radio (not to mention scanner and sw folks) to let the flamers wreck everything.

As far as mental ability, I tried like heck to kill mine when I celebrated my birthday. The only result was a big headache LOL.

You and I might have a minor disagreement, but it appears you are willing to discuss it. So am I. As to typing, I had an interview some number of years ago and when it was mentioned that the individual that was to be replaced was producing their newsletter, I mentioned that I could type over 65 words per minute on a bad day into a headwind. When they said "we don't type anymore, we use computers", I stated that I believed it was time to call a halt to the interview. Certainly keyboards have changed a bit (I remember close to 50 years ago, my father had an old typewriter with a "cents" figure on it), but the keys (alpha and numerics) are laid out the same. Yes, the computer keyboard has an extra set of keys with numbers (use the numbers lock) on it. Still, I have no problem with 65 words per minute. I admit I'm down a bit from the time I had to fight a 100 word per minute teletype to get burst of 92 words per minute out, but I still have no real problem either typing or programming.

Some of us are trying to pass the torch to younger folks. The plain fact is that amateur radio need younger folks (not to mention more women).

If you might be interested in joining, please e-mail me off group. The address is aa2qa@frontiernet.net

That's too bad since this is one of the few flea markets where you can find this "old stuff". In fact I found exactly what I was looking for, some old 72 pin 32MB EDO memory sticks and some 128MB 168 pin DIMM memory sticks. It was FAR cheaper than any vendor on line I found, if they even had what I was looking for in the first place. Those old computers get put into service as packet nodes, dedicated remote rig control computers, DSP based sound card digital modes, etc. I would rather tie up the old PII 333MHz machine I'm using right now, got it for $80 including the monitor at a local Ham fest, than my new AMD FX-55 system. Now all I have to do is find some Linux based sound card software.

I disagree!

They're both highly useful. Just in different ways.

> If one
> needs to send a lot of text, a computer and the Internet just

Of course! But then you need a readout device.

Usefulness depends on the application.

> Via
> radio, there are digital modes, of course, and text can be
> reliably sent
> much faster with many of the digital modes (even the very dated
> RTTY).

Sure - if someone has the equipment handy.

But the whole digital-mode-faster thing is kind of bogus in my view.
It's like saying that since we have cars, there's no reason to have
competitions where people run anymore. Heck, why doesn't everyone in
the Olympic marathon use rollerblades? The times would drop
dramatically.

>
> I have to chuckle at the length of this thread; I thought it
> an interesting
> link and figured there would be a couple of cw detractors that

> but the thread turned out a bit longer than I figured. I keep
> forgetting
> how heated the cw vs no cw arguement can get.

The telling part is that the anticode folks call the test "rigged"
and other nonsense in an attempt to discredit what happened. But
the plain simple fact is that a couple of good Morse Code
operators, going about 1/3 the world-record speed, were faster
than the *world record holders* in text messaging.

What they missed is that the whole point of the segment was to
show that "newer" isn't always "faster/better/easier" and that
"older" doesn't equal "useless". The outfits on the two teams
were a visual way of adding to that.

One member of the Morse Code team was reportedly at Dayton
in his telegrapher outfit.
==========

Yup. I saw him walking around the show.

They were located in the same areas as they have been for the last 5 years or so that I've been going to the Hamvention. This was the only year I saw where Yaesu didn't have one single item donated for a prize.

> I was there on Friday. I thought it would plus-up on Saturday.

That was nothing compared to a few years back where EVERY space in the flea market area was filled! It used to take me at least one full day to walk the outside area, this last time I did it in half a day because there were so many empty spaces.

> The ARRL was there in force.

They didn't look too particularly busy either. Several of the booths they had set up for specific areas the people behind the tables looked like they had a had time trying to stay awake since nobody was there asking questions etc.

>
>> What did anybody else notice? I hope the above isn't a long term trend.
>
> Old men. Yes, it's a long-term trend.

That's really too bad since there is a lot the ARRL can do to change that. One of the big problems is the ARRL, and the old time Hams, who want to treat HF as the "Crown Jewel" of Ham Radio and the heavy emphasis on it when trying to recruit new Hams and current Hams to upgrade. The fact is young kids can DX all they want on the computer, no license required. So if they want to get young Hams in to the hobby they need to wake up and show them what Ham Radio has to offer that they CAN'T get using the Internet and a cell phone.

thing
>in order to "win an argument." "

Oh, oh! Reverend Jim issued a Sermon On The Antenna Mount! :-)

Not only that, the poor guy is still furious over NOT "winning"
a newsgroup argument THREE YEARS AGO! :-)

Not only that, the "argument" wasn't even about RADIO!

Hello? This newsgroup is about AMATEUR RADIO POLICY. Military
and international socio-political politics are another group.

"RADIO" includes all of the HF portion of the EM spectrum. That's
where the major international communications networks WERE in
the 1950s. I was part of that - for three years - as a
volunteer in the United States Army...operating HF transmitters
for an Army station. A "small" station, only the third largest
in the worldwide Army net at the time, just 36 transmitters
ranging from 1 to 15 KW in 1953 (43, up to 40 KW in 1956) and
none of them using OOK CW modes. That station was located in
Japan, specifically a few miles outside of Tokyo. 24/7 ops
attached directly to the Far East Command Headquarters, then
in Tokyo...continuous links to Seoul, Pusan, Okinawa, Manila,
Saigon, Anchorage, Seattle, Hawaii, San Francisco plus local
HF nets all throughout the Kanto Plain of Honshu Island.

In early 1953 there was still a state of War between the
United Nations and North Korea although a truce was
imminent (that would settle into a "permanent" Truce in
July, 1953). I had voluntarily enlisted in the Army on
13 March 1952...when there was still active warfare in
Korea. My assignment to the Far East was ordered by the
Army and not subject to my approval or disapproval...one goes
where assigned or one goes where the penitentiary is (after a
court martial).

Army duty required a continuous practice on soldiering skills
regardless of one's military occupation specialty. In addition
to that, there were continuing updates on emergency and
contingency plans plus operational tests of same. Note the
location of Japan to the easternmost parts of the USSR, then

an adversary in the "Cold War." The USSR then possessed the atomic bomb.

Since I was in the Signal Corps and working on/with radio communications, my unit was NOT briefed on the overall military capabilities of the Soviet Union to the detail outlined in the Janes books. We had one simple directive in the case of military conflict: "Close with, and destroy the enemy." We were all reminded of that in the regular training sessions of Provisional Infantry Platoon ("PIP") practice, along with "you are soldiers FIRST and signalmen second." We were NOT given any of the movie-style practice on identifying Soviet aircraft from little models or silouettes...nor were we instructed in operation of anti-aircraft defense (there were other units for that purpose).

While all that was going on, station ADA kept on 24/7 operations at a rate of nearly a quarter million messages a month through its facilities...thousands of miles from the United States of America. Was FEC Hq "in danger" from its "rear-area location?" Depends on what you "4F" types want to call "danger" from your safe locations in the states.

Now, did I make a "mistake" on calling out Soviet "Bear" bomber types in 1953? Yes. In the 49 years from 1953 to 2002 (date of your target "example" message) I've seen a LOT of statistics and information on Soviet military power. If I needed to be SPECIFIC, then I would go look up the EXACT thing. But...Soviet aircraft was NOT in my "line of work" in 1953 to 1956. Radio was. HF radio...and VHF, UHF, and microwave radio. RADIO, Jimmie. RADIOS that must operate 24/7, "getting the message through." I made NO "mistakes" there.

You want to sit safe at your computer and scoff and scoff and show how "expert" you are in military and political matters...and NEVER having served in any government post or military in REAL SERVICE for your country. You want to "tell me how it is" in the military without wearing a uniform, taking any induction oath, or being shipped out of the country to some foreign base. You want to attempt humiliation all because you are still "suffering" from not winning some "message battle" years ago. Poor baby.

Jimmie boy, there's NO indication that you EVER worked IN radio...or in aerospace...and you want to be an "expert guru type" on that. You've not worked AT the FCC, you've not worked AT the ARRL, you are NOT in the judiciary, yet you try to speak as if you were all of that. All you seem to have is long "tenure" in amateur radio NEWSGROUP MESSAGING. Hours and hours and hours of that. More than I have.

On Memorial Day you WILL be remembered. We veterans all remember the anti-military civilians who like to spit on military people one way or another, SAFE in their un-touched communities expressing contempt for anyone who has served via the Internet.

Amateur radio is a hobby activity carried on for the purpose of personal enjoyment. It is, in part, a technological endeavor involving the laws of physics, regulated by the government because ALL radio works by those same physical laws. Amateur radio is NOT a fifth branch of the armed forces. Ham operators are NOT "serving their country" any more than stamp collectors or bird watchers or other hobbyists. Try to keep from translating your amateur radio license form into a DD-214.

Here's my "salute" to you, Jimmie Noserve, on this upcoming Memorial Day: <middle finger upraised>

Temper fry...

LenAnderson@ieee.org
ex-RA16408336, USA, Signal Corps (1952-1956)

Not a complement, tsk. Jimmie has "hung" himself enough
already in here. He may have run out of "rope?"

Lately he has desired REOPENING three-year-old postings
to ARGUE those postings all over again. Oh, my. Can't
let the past be past, can he?

Computer-modem communications must be his LIFE now?

>
>Hey, you went through the IGY57/58. Did you notice anything unusual
>about the propagation?

I returned to the States in early 1956.

The only thing I recall was a TOTAL ionospheric blackout
(on local midnight shift) in the Fall of 1955. Lasted about
three hours, give or take. Back-logged about 100 messages or
so which impacted the flow a bit. Before IGY, of course.
Only the long-distance circuits (nearly all) over 300 miles
were affected. VHF and above LOS was not affected.

>> PRIOR to 1990 will show enough support for No-Code-Test that
>> the FCC was lobbied into the 90-53 issuance.
>
>Oh, please. You know how these guys are about documentation. Long on
>demands, short on product.

Yes, I do...but remember that "these guys" are all PCTA Extras
and have their Double Standard to rationalize their actions.

However, Jimmie is still upset about OLD postings in here and
demands some kind of "recount" and weird "admission of guilt"
over some imaginary "wrongdoing." Jimmie's MISDIRECTION into
old, old posting arguments is one form of his rationalizations.

>> Once the NO-CODE-TEST Technician class was established, the

>> on seeking the "highest goals" in amateur radio...complete
>> Nirvana in morsemanship. Ho hum.
>>
>I especially like his vision of an active amateur radio service during
>WWII. Hi! What a vision! What a revision!!!

Super vision! [either he IS that or NEEDS that... :-)]

Jimmie "lived" IN WW2...in his heart and fantasy...just never
was IN the military or faced the prospect of harm to his body
then or later...when he was alive and could have, but didn't,
serve in the military. "He served in other ways..."

I just can't picture Jimmie using an M-209 Code Converter and
tapping on an AN/GRC-9 to "send intel back from the front lines"
to his unit (which wasn't done much in actual fact). Since the
tanks and trucks depended on VOICE comms over VHF sets in Yurp
then, he can't be pictured using a knee key in a bouncing
Sherman tank facing the Panzers along the Rhine. Neither can
he be thought of as "working" the ARC-5 sets in B-17s and B-24s
over Germany (the two pilots used the Command set, the radio-
op-gunner was only connected to the low-HF Liason set). He
certainly wouldn't use VOICE on the first "handie-talkie" (on
HF, operational in 1940) since he thinks HF is only for morse.
Neither would he be pictured using a BC-1000 "walkie-talkie"
(VHF voice only and Heavy backpack) even though that was
widely used - and praised - by the "grunts" of that time,
both in Italy and in Yurp. Jimmie is a MORSEMAN and that is
that... :-)

> Brain was in the Air Force. That's why the cross-reference.

1. Helicopters are NOT a radio subject, let alone AMATEUR RADIO.

2. Military aircraft nomenclature, names are NOT a requirement
in AMATEUR RADIO.

3. Are there any AMATEURS operating "helicopter mobile?" :-)

>> The "Pave Low" is the MH-53E through O suffix, operated mostly
>> by the USAF. More specifially "Pave Low II" to "Pave Low VI."
>
> Amazing how "smart" you are with the click of a mouse, eh...?!?!

All the information on the Internet is at ANYONE's disposal.

> Too bad you can't retain some of that...

Not my job. Too bad Stebie can't remember to get names correct
on helicopters he has "served." :-)

>> The "CH" in the type designation stands for Cargo, Helicopter.
>
> Very good....Still not any "smoking gun", though...
>
>> The CH-53A through CH-53D are CARGO HAULERS.
>
> As is the CH53E Super Sea Stallion, on which I was qual'ed.

1. The colloquial term for "qualified" is spelled "qualled"
as it is pronounced.

2. The CH-47 and CH-54 are also Cargo Handlers, types that
I've designed test sets for...and gotten them in
production and eventually delivered (RCA EASD).

>> Some of the MH-53s are into special ops. But, the Sea Stallion
>> is basically a CARGO HAULER, first operational in 1966.
>
> Actually first operational in 1965.

FORTY YEAR OLD DESIGN. :-)

> The "CARGO HAULER" was used for "special ops" through out it's
>career too, Lennie. That's why the USMC had them fitted with
VULCAN's,
>-50's, etc.

Tsk...next thing will be Stebie bragging on his "special ops"
experience...maybe with a "HALO Drop" story? :-)

The tactical and strategic use of helicopters is NOT anything
close to AMATEUR RADIO POLICY.

> That's also why the USMC fit's them for vertical envelopment.

NOT applicable to AMATEUR RADIO POLICY.

> The USMC, The Air Force and the Navy all used them for SpecOp
>insertions, Maritime patrol, security-of-the seas missions.

NOT applicable to AMATEUR RADIO POLICY.

> The airframe comes off the same production line at Sikorsky at
>Stratford, CT.

NOT applicable to AMATEUR RADIO POLICY.

> The same airframe...Over 80% interchangeable.

NOT applicable to AMATEUR RADIO POLICY.

> And the missions of the CH-53 (ALL variants) far exceed "CARGO
>HAULING".

NOT applicable to AMATEUR RADIO POLICY.

> Of course you didn't know that because the scope of your
knowledge
>stopped at your wrist.

Not my job to know details of helicopters. :-)

> I didn't lie about a single thing, Lennie.

Not in Stebieworld. Stebie NEVER lies in Stebieworld...everyone
else does there... :-)

> If you want a REAL education, you should read some of the
>histories of the USMC's various Sea Stallion units...Most notably
>HMH-462, HMH-464, HMH-363 and HMH-361.
>
> I was in all except 464 at one time or another.

NOT applicable to AMATEUR RADIO POLICY.

> Take the time to do some research and you'll find a few of those
>"seven hostile actions" you claim I never participated in.

Is Stebie's name featured anywhere on those "research pages?"

So far, none of us readers have found out the WHEN and
WHERE of Stebie's famous "seven hostile actions."

Hint: This newsgroup is NOT about the Glory of the USMC
or about helicopters. Try to stay focussed. If you write
names of helicopters, try to get them CORRECT.

>> If you are going to LIE, BLUFF, SCAM, try to get your military
>> nomenclature CORRECT.
>
> I did so. Absolutely correct.
>
>> You did NOT do so!

Tsk, tsk. I corrected you and you admitted to the INCORRECT
"cross-reference" (your term for covering up your mistake). :-)

BWWAAAAAAAAAAAAAHAAAAAHAAAAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAH
HAHAHAHHAHAHAHAHAHAHAHAHAHA<gasp>HAHAHAHAHAHHAHAHAHAHAHAH
HEHEHHEEHEHEHEHEHEHEHE!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!

I've spent 53 years working in RADIO-ELECTRONICS, not
helicopters. This forum is NOT about helicopters. This
newsgroup is about RADIO, specifically amateur radio policy.

So, Stebie, how much time did you spend in Building 82? :-)

Temper fry...

Nope. This newsgroup is about AMATEUR RADIO POLICY, not
the glory and history of the USMC.

So...Seve can tell us exactly WHAT those MOSs DO, can he? :-)

Tsk, so far Seve has AVOIDED stating outright that he was
an aircrewman. That leaves only GROUND crew...which are
as important as any position for 40-year-old aircraft designs.

>> >You don't "give" me anything. My service is not up for your
approval.

Sevie committed Navigational Error! Wrong HEADING! :-)

Of course, there's the possibility he suffers from mental
blackouts and just cannot remember American history.
Traumatic Stress Syndrome from those "seven hostile actions?"

Since I and my wife each got LCD flat-panel displays last
year, I'm not worried about him breaking our monitors.
I may have to sleeve the fluorescents over the L-desk in
translucent sleeving, though.

As for "shrillness" [plus outrage] at least 40 db over S9,
wait until I show a copy of his "dishonoring my unit"
message to the guys who are going to be at the Westwood
federal cemetary on Memorial Day! Poor Sevie gonna be
so outnumbered by REAL veterans... :-(

Sevie be trying to kick box in here. Keeps hurting his
foot, falling over.

He doesn't understand that this newsgroup is about RADIO,
not his USMC career or helicopters. Heck, even on helos
he gets his nomenclature wrong. Tsk.

>> > >You don't "give" me anything. My service is not up for your
approval.
>> >
>> > Nor mine. I went where I was assigned. Anyone can see where
at:

http://kauko.hallikainen.org/history/equpment

[Sevie thinks that omitting a website will make it go away]

there.
>>
>> You certainly take liberties with "approving" mine.
>
>Nope. You've continually denigrated my service and Len's with REMF
and
>box-kicker descriptions.

Sevie never worked any REAL communications in the military
is why. He can't even describe the MARS station on Okinawa,
has to have OTHERS "find out" independently. Tsk. Anyone
so proud of working a real MARS station ought to remember it
forever, reel off types and names from memory, etc. Sevie
can't seem to mumble out any radio box types in his "helo
maintenance" experience. Tsk.

>> > >> Some of my colleagues weren't so lucky. That

>
>Test flight mike?

Tsk. Sevie was ostensibly stationed (somewhat) near China Lake,
which is also not too far from Edwards AFB. Too bad the self-
made "pilot in command" on CAP never got into such real testing.
Oddly enough, for all Sevie's bragging about "being pilot in
command," he never got right-seat in helos...never even left-
seat. [helos reverse the Command and Second seats traditionally
left and right, respectively, in fixed-wing craft]

There's still a chance for Sevie to get "test flight mike" time
since China Lake is going to be doubled in total personnel in
the new DoD base planning. Edwards isn't closing, neither is
the AF Plant at Palmdale. Kern County Airport #7 was closed to
USMC ops decades ago, is now private, and Scaled Composites
flies real spacecraft out of there [see Burt Rutan & Co.].

Too bad Sevie will NEVER get to work in Building 82 at BUR. :-)

Amateur Radio is not in your "..line of work..." in 1953, 1956, or even 2005.

Nor is the employment of the CH53 or Pave Low helicopters, mental health care, medical health care, politics, emergency communications or aerial navigation.

All subjects that you've ventured asssertions of fact on and never got quite right.

> Here's my "salute" to you, Jimmie Noserve, on this upcoming

Hello, Sharkie

My bad. I meant 700 watt system - not something from the 70s LOL. All Bose speakers. A couple hundred watts on the bass alone (and it does shake, although I keep the volume down).

Good to hear from you too. I'm not really mad, just disappointed that folks don't understand the need for regulation. I have a dog and she stays in the house for the most part. When I have her out, if she barks more than a few times, I bring her in. The neighbors don't need to hear a dog barking for 20 minutes or more. Same thing with the stereo system.

Heck, I've made a mistake in the past. Had a party with the Hammond turned up pretty well (as well as the Leslies) and the cops showed up. I apologized and shut it off. Never done that since (and that was 25 years ago). No biggie; anyone can make a mistake.

73 from Rochester, NY

You're welcome to do the homework and find out.

Espeically the 8981 MOS.

I never "denigrated" your service, Brain.

I said your Amateur Radio activities from Somalia were not legal.

I've also told you to not lump me into the same pile with you and Lennie. I give you more credit for having been in a forward area, and have acknowledged that.

Your mentor's only exposure to any "incomming fire" was required rifle range time. last I checked RF-burns and paper cuts don't count for much.

What "weasel worded" explanation, Hans?

You STILL have yet to explain this alleged insult adequately to
anyone.

I said that pretty faces in comely attire sell things. That's
nothing that any first year advertising student doesn't already know.

So...Just running off at the mouth on yet another self-righteous
rant, hans?

Seems like it too me.

Can you draw the schematic for a push-pull RF amplifier using link coupling and explain how it works? Can you draw an AM transmitter using Heising modulation and explain how it works?

Those who are too dumb or lazy to get a license like to parrot the old
standard, 'ham radio is dying". They can't make the grade so they like
to think ham radio will someday go away then they won't feel so inferior.

Detail for ISS contact with Coronado School in California on 5/24/05
at 17:21UTC

Coordinator: Dieter Schliemann,KX4Y Event Type: School Contact
Start Date (mm/dd/yy): 05/24/05 End Date (mm/dd/yy): 05/24/05
Open to the Public: Yes Special Event Callsign: NA1SS

City: Coronado State/Province: CA
Country: US

Additional Comments:

We hope to see you join us in listening to this contact between the
ISS and the Coronado School in California on 24 May 2005 on the
EchoLink AMSAT and EDU_NET servers. The event will start at 17:21UTC.
Please give the EDU_NET server your preference over the AMSAT server
for your connection. This will keep the load light on the AMSAT
server, assuring us of better audio quality all around.

If using IRLP is more convenient for you than using EchoLink, please
connect to the IRLP reflector 9010. The ARISS IRLP Team is feeding
the audio into that reflector. No prior approval is needed to connect
to the IRLP reflector 9010.

Thanks for your interest and 73, de Dieter kx4y

> if you did the general theory it would say general

You're mistaken.

The original Technician written examination, up until 1981 if memory serves, was the exact same test as the General written examination. If you passed the written and 13WPM you became a General --- if you passed 5WPM you became a Technician. If you failed the code test you came back in 30 days and took the whole thing over again, with no credit for having passed the written.

Life's a bitch and then you die and they give all your toys away.

Depends on the person. For someone who knows a little radio theory and
the regulations of the amateur radio service, none of the tests were
very hard.

Heck, I passed the old General and Advanced class tests in 1968 - at
the age of 14. That was the summer between 8th and 9th grade for me. No
big deal, there were younger hams than me with Extras back then.

The difference between then and now is the test *method* more than the
content.
>
> > And even after the exams

Good or bad, I don't think FCC will go back to the old way.

> > There were study guides with sample questions, but no
> > questions pools with the exact answer available for memorization.

>
> Now if you want *really* hard, make it no study guide, no question
> pool, and the applicant has to do all the learning research with NO
idea
> of what is on the test! 8^)

The old study guides were essay-type Q&A that outlined the general area
of
knowledge. One question could cover a *lot* of ground. The old Extra
study
guide was as much as 279 questions at one point.

> > If you
> > did not know the theory, then you probably weren't going to pass.

But you had seen the exact Q&A before, right?
>
> What I have seen of the earlier test is that they too were pretty
> basic. Any difference is not so great that those who came before need

> not feel any superiority.

Not a question of superiority, but of test validity.

The difference between then and now is the test *method* more than the
content.

> I aced the Technician test with the only study being the safety
questions.

For you.

But I bet you had more than a little electrical/radio knowledge before
you ever looked at a ham radio study guide.

> Now the Morse code was another thing entirely. That was hard.

> But then I'm just a dum nickel extra! ;^)
>
I bet it says the same thing on your license as it does on mine. With
no mention of dumb or nickles, Mike.

Each of us met the requirements in force at the time of being licensed.
That the
requirements changed over time isn't usually due to the people taking
the new tests.

Looking down on somebody today because they didn't take the same tests
you took years ago is kind of like getting mad at someone who paid less
for a VCR last week than you paid 20 years ago....

Didn't see that. But as a Japanese owned company, they have a different culture, and some of the things they do might seem a little different to us.

Yup... that seems different!

By the ARRL own statistics, ham radio is dying--don't you realize the
population is growing in leaps and bounds... and still hams dwindle (and
inactive numbers are LARGE)--get some geriatric medication for that
alzheimers man!

Warmest regards,
John

....to deregulation of Amateur Radio in the UK that is!

*** From the country that brought you HF with no morse test -->
Complete deregulation --> Wireless Telegraphy Act excempt,
un-regulated, un-policed, un-enforced, free-for-all SHF/UHF/VHF/HF
bands within a 18,000 mile radius of London, England

*** Have YOUR SAY !!!!!!!!!!!!!!!!!!!!!!!!!
----->>> JUST DO IT ----->>> (read on, click on the reply link below)

http://www.ofcom.org.uk/static/subscribe/radiospectrum.htm

On 26th of May "OfCom" the UK's Radio Authority will issue a
consulation document on the future of Amateur Radio Licensing in the
UK. The consulation is open to all and will ask a number of questions
on options such as licence for life, de-regulation and:

"..options to make the (UK) amateur radio service WT Act
licence-exempt" [#1] - That's all amateur radio exempt from licensing
under the UK Wireless Telegraphy Act, it'll be a nightmare on the
bands, HF included.

Just so you do not miss this important event in world amateur radio,
add yourself to the mailing list here:

http://www.ofcom.org.uk/static/subscribe/radiospectrum.htm

....and HAVE YOUR SAY !!! You will be emailed on May 26th, immediately
the consulation is published. HAVE YOUR SAY !!! HAVE YOUR SAY !!! HAVE
YOUR SAY !!! HAVE YOUR SAY !!! HAVE YOUR SAY !!! HAVE YOUR SAY !!!

OK, enough of this beating around the bush, Chesty II, let your hair down and tell us how you REALLY feel...!

...the sun sets on the Tomb of the Unknown Solder as a solitary figure in a patch-adorned flight suit slowly paces out his lonely path of anger, J-38 in one hand, bayonetted USMC soldering iron in the other. Pre-recorded marine marches softly fill the air, interspersed with dits and dahs of a few PCTA morsebirds not yet extinct. The Tomb of the Unknown Solder is a lonely place, deep in the valley of neuroses, anger, and frustration. The single sentinel counts cadennce to himself, muttering "flux you, flux you" between the slow steps. His fists are clenched, eager to do bottle but only sipping a cup of unkindness. It is sad but the sentinel at the Tomb of the Unknown Solder keeps going. He does not know why and that is the tragedy. The sun slowly sets on the Tomb of the Unknown Solder leaving only the red light of fire in the eyes of the muttering sentinel. Those glow in the dark like LED pilot lights. Hatred lives on in his twilight of despair.

Temper fry.

Here's how it went when I got into it...back in 1991-1992

No-Code : Written Exam (No code was introducted in 1991)

Novice : written exam and a 5 wpm

Technician : written exam

General : written exam, 13WPM

Advance Class: written exam

Extra Class: written exam, 20WPM

Recently they changed that and is followed

No code: No change

General: 5WPM and written exam (if you have taken your 5WPM all you had to do is take the written exam for the general and your grandfather in)

If KC8GXW was a general (Ie had taken his written exam for his general) then the FCC database would say Technician it would say general. The fact is the FCC database says he is a old technician,

And all of them paid for by US taxpayers - most of whom were civilians.
At least one transmitter was built by a vacuum-cleaner company. OBTW -
most of that equipment was designed and built by civilians...

> That station was located in
> Japan, specifically a few miles outside of Tokyo. 24/7 ops

That's nice, Len. You've told that story here many, many, many, many
times. I've looked at your faded photos on that website.

What in the world does it have to do with amateur radio policy today?

> In early 1953 there was still a state of War between the

700+ personnel, too.

> Was FEC Hq "in danger" from
> its "rear-area location?" Depends on what you "4F" types
> want to call "danger" from your safe locations in the states.

I was never classified "4F", Len. I still have my draft card, btw.

> Now, did I make a "mistake" on calling out Soviet "Bear"
> bomber types in 1953? Yes.

At last! Len actually admits a mistake!

> In the 49 years from 1953 to
> 2002 (date of your target "example" message) I've seen a
> LOT of statistics and information on Soviet military power.
> If I needed to be SPECIFIC, then I would go look up the
> EXACT thing.

But you didn't. In fact it was you who brought up the Bear bombers in the first place - back in 2002 and again a day or two ago. Not me.

What you did was to understate the distance from where you were to the Soviet Union, and you overstated the threat by describing it as being about an hour's flight by a bomber that wasn't even in production while you were there.

If you want to play that game, Len, how about this:

You grew up at a time when the enemies of the USA were thousands of miles away, and could not directly attack CONUS. Even in WW2, the direct threat to the USA was some sabotage, U-boats sinking ships off the east coast, and some Japanese submarine gunfire and incendiary balloons off the west coast.

I grew up at a time when the enemies of the USA could directly attack CONUS with nuclear missiles (both landbased and submarine launched) in a matter of minutes. There was no defense against such missiles - in fact, they could be here before an effective alarm could be sounded.

I remember the Cuban Missile Crisis even though I was a child at the time. I knew what "the bomb" was and what it could do - and how quick it could get to Philadelphia from Havana.

Yes, we've all lived under that threat for many decades now. But you didn't grow up with it - I did.

> But...Soviet aircraft was NOT in my "line of
> work" in 1953 to 1956.

You still messed up on the distances and the threat.

> Radio was. HF radio...and VHF,
> UHF, and microwave radio. RADIO, Jimmie. RADIOS that must
> operate 24/7, "getting the message through." I made NO
> "mistakes" there.

Did you design or build those radios, Len? Did you pay for them?

Or were you part of a large, well-equipped, well-trained team
specifically set up to do the job, and provided with everything
you needed to do it right?

I think the latter.
>
> You want to sit safe at your computer and scoff and scoff
> and show how "expert" you are in military and political
> matters...

BULLSHIT, Len. That's pure and adulterated BULLSHIT.

There's just no other word for it.

You made several mistakes about Soviet aircraft and distances from
the USSR to Japan. I pointed out those mistakes. You have a hissyfit
whenever I point out a mistake of yours, which is quite often.

I don't claim to be an expert at anything. You got your facts wrong and
I pointed out the error. You are not some sort of sacred elder whom
everyone must never contradict.

> and NEVER having served in any government post
> or military in REAL SERVICE for your country.

What constitutes "REAL SERVICE", Len? Is it only uniformed military
service? Or can someone serve in other ways?

How about law enforcement? Firefighters? Emergency medical personnel?

Or don't they count?

Besides, I've seen how you address those who *do* have military and
government service, but who dare to disagree with you. Their service
means nothing to you - in fact, you make fun of it, question their
veracity, insult them in every way you can imagine. For example,
there's your classic "sphincter post" and the unforgettable "feldwebel
post".

So it's logical to conclude that no matter what military or
government service I had, you'd still behave towards me the way
you do, if I dared to disagree with you.

It's what you *do*, Len. We've all seen it, many times.

> You want to
> "tell me how it is" in the military without wearing a
> uniform, taking any induction oath, or being shipped out
> of the country to some foreign base.

No, I don't. I simply point out some of your mistakes.

You, OTOH, want to tell everyone how things you have no experience
with should be. Like the age limit for an amateur radio license, even

though you've never been a parent.

> Jimmie boy,
> there's NO indication that you EVER worked IN
> radio...or in aerospace...

So what? No matter what experience I had, it's logical to conclude that you'd behave the same way towards me.

> and you want to be an "expert
> guru type" on that.

I don't claim to be an expert on anything, Len.

> You've not worked AT the FCC, you've
> not worked AT the ARRL, you are NOT in the judiciary,

Neither have you!

> yet
> you try to speak as if you were all of that.

Not me, Len. That's your game.

> All you seem
> to have is long "tenure" in amateur radio NEWSGROUP MESSAGING.
> Hours and hours and hours of that. More than I have.

Wrong again, Len. You were on rrap before me. Your postings exceed mine in number and volume. I make one little post and you go off like a fire hydrant of words.

> On Memorial Day you WILL be remembered. We veterans all
> remember the anti-military civilians who like to spit on
> military people one way or another, SAFE in their un-
> touched communities expressing contempt for anyone who
> has served via the Internet.

You served via the internet? ;-)

Here's a fact, Len: I'm not one of those you describe, no matter how you try to spin it. Not in any way.

Here's another fact, Len: Your military service does not mean your comments here or anywhere else are somehow sacred from challenge or correction of factual and/or logical mistakes.

You make a lot of talk about freedom of speech but when someone like me actually exercises that freedom, you tell them to shut up.

Perhaps I should repost your classic "feldwebel post". Here's what you told K8MN (who has both military *and* government service, in *radio*):

Quoting Len Anderson:

"shut the hell up, you little USMC feldwebel"

(end quote)
>
> Amateur radio is a hobby activity carried on for the purpose
> of personal enjoyment.

That's part of it. But not all of it. There's also the public
service aspect. Why don't you mention that aspect?

> It is, in part, a technological
> endeavor involving the laws of physics, regulated by the
> government because ALL radio works by those same physical
> laws.

Gee whiz, Len, tell us something we *don't* know....

> Amateur radio is NOT a fifth branch of the armed
> forces.

Nobody claimed it was.

> Ham operators are NOT "serving their country"
> any more than stamp collectors or bird watchers or other
> hobbyists.

That's simply not true, Len. You keep ignoring the public service
performed by radio amateurs.

What constitutes "REAL SERVICE", Len? Is it only uniformed military
service? Or can someone serve in other ways?

How about law enforcement? Firefighters? Emergency medical personnel?

Or don't they count?

> Try to keep from translating your amateur
> radio license form into a DD-214.

Len, "you do not now have, nor did you ever, nor will you ever
have the authority, expertise, training, experience or
qualifications to give me an order or to imply you are
giving me an order."

Those are your words, Len, but they fit perfectly in this situation!

> Here's my "salute" to you, Jimmie Noserve, on this upcoming
> Memorial Day: <middle finger upraised>

Gee, Len, that's really impressive. Do you think that sort of
behavior somehow makes you "right" and me "wrong"? It sure
seems you think that way.

Exactly, and it is quite tough to draw out a schematic of a AM transmitter using Heizing modulation. I remember having to keep straight a bridge, half wave and a full wave. I don't remember having to draw out a schematic, but I certainly remember having a print on the exam that I had to describe what was going on with it. Not quite as tough, but basically the same idea.

In order to have a "civil discussion" on Amateur Radio policy,
Lennie would have to have some sort of experience from which to make
informed opinions or suggestions from.

No one doubts his "inside the black box" knowledge, however he
knows almost "diddly squat" about Amatuer Radio practice or policy.
His rants on "Morse Code TESTING" are emotionally based and bear no
relevence to current Amateur employment of the mode.

In other words, "He Just Doesn't Get It".

Now I found this RATHER Interesting Link

Go ON HAVE A DIG ROUND

It makes interesting reading

http://www.ofcom.org.uk/radiocomms/ifi/licensing/classes/amateur/?a=87101

I tried to get into the internet section and noted that at the moment its pass word protected

Boooooooooty Sleeeeeeeeep calls

regards to All

(Well Almost)

Weell, the key word is "exact". I noticed that when I took my Extra
exam, many of the answers appeared in a different order than they were
in the question pool. I came away convinced that the person who
memorized the question pool was actually doing things the hard way.

Yup. I think that my level of expertise was just a little skewed. I got sidelined onto computers fairly early in the 1970's. Then I worked mostly in digital, then changed careers, going into photography, videography, and 3-d animation (waaayy too many hats to wear, but whatever) But I did have a good bit of electrical experience

Yup. My comment was mostly sarcasm. The only way that anyone knows my "vintage" is by my callsign

I didn't say I was a general, that's why I told you to read real slow. I
said that I had to take the General theory in the early 80's but I
didn't do 13 wpm code so I only got Tech. So you are wrong about the
know code.
So Toad, can you say you were wrong? We aren't talking about 1991.
Besides, what's an ex stock boy from Wally world know anyway!

Ah, there is the key, "studying", not just memorizing. Once you study it
and know it, it isn't hard.

All such a very old Tech licensee would have to do to
upgrade to "general" was to show a VE his old license.
It wasn't automatic, as the FCC didn't keep records
that far back before 1987 (when they stopped having
the general written test for techs). Later the FCC
dropped the code for techs.

I was such a very old tech, and I decided to lock in my
new privs by doing the upgrade. While I was at it
I took and passed 4A and 4B (this was a few months
before the restructuring rules were to kick in but
after they announced it), held onto the CSCEs and
cashed them in at a special VE session held early
morning Restructuring day. I was in the FCC data
base the next week as a newly minted extra. Oddly
enough, in those stats someone posts here from time to time,
I'd be included as an old extra as I was in the database
before his cutoff date of May 2000. (Oh, if you look
up my call at the FCC web site, you'll find a Dec 2000
date, because I moved QTHs then). Kept my old "novice"
style callsign (2x3).

Given a little bit of studying, yes. Do you want B or AB for the pp amp?

Heising is a plate modulation method for a type A amp.

Buzz, it's just different, not harder.

Know the feeling :) I had my cousins out last year, Thursday night and was
out in my backyard 2 minutes past 10, started heading into the house and
they came a running out and said the music was keeping their kid awake. Went
over the next morning, Six pack & bottle of wine in hand as an apology, the
wife says "oh you were keeping me awake". I mean, it's not like I do this
but once every 3 years, show a little patience., I do when they start firing
off fireworks into the air, midweek after
10pm.

It's not about what Wal-mart paid him, Jim...It's about what he
can sponge off of mommy and daddy.

Let's see...he's allegedly 36...Just giving M&D the benefit of the
doubt of having been 21 at the time the Toad was hatched, that would
make them 57...

Almost time to retire, but still breast feeding Junior. Mom's got
to have some callouses by now!

Disgusting...You'd think M&D would have cut that cord decades ago.

> By the ARRL own statistics, ham radio is dying

Well, shrinking, anyway. The total number of US hams is down slightly from the peak of a few years ago, while the total US population continues to grow.

But I would note that the shrinkage occurred *after* the April 2000 reductions in both Morse Code and written testing for all available license classes. IOW, making the licenses easier to get in 2000 did not result in sustained growth.

Looking further back, examine the growth from 1990 or 1991 to 2000. (1990 is when medical waivers made it possible to get any amateur license with a 5 wpm test, and 1991 is when the Technician lost its code test. Then compare the growth in that 9 year period to the growth in an equal period of time before 1990 or 1991. You'll find that the overall increase in the '80s was *greater* than in the '90s.

>
<PLONK!>
G1LVN are you awake? Can you read? More to the point are you
getting Hamiltons from the RSCB for writing this drivel?

Try this quote from the OFCOM page :-

"For the avoidance of doubt, whilst the formal public consultation
will put forward a number of other options for the future, those
options are explicitly not recommended by Ofcom. Specifically,
Ofcom will not recommend any options to make the amateur radio
service WT Act licence-exempt; however, for transparency and
completeness, this will be put forward as an option in the
public consultation in order to gather the community's views"

This is the real link to the OFCOM page on the consultation:-

http://www.ofcom.org.uk/radiocomms/ifi/licensing/classes/amateur/forthcoming?a=87101

http://tinyurl.com/dnall

Just try to read and understand it instead of spreading FUD
because you cannot comprehend simple and straightforward English.
OFCOM is not going to deregulate Amateur Radio in the U.K. They
are going to deprive the RSGB of an expected income stream, and
the beneficiaries of all the free jollies are throwing their
toys out of the pram.

No rational amateur can object to what OFCOM is really proposing,
unless they have an ulterior motive as the RSGB hierarchy do.

Two questions:

1) Is this shrinkage due to...
a. Less new applicants
b. Increased attrition

2) Are easier tests the cause of the shrinkage...
a. Yes
b. No

Ham radio just isn't very appealing to the current generation. There are too many other things to compete, computers, the Internet, vidoe games. Kids had rather be skilled at playing the latest video game than have technical skills in some outdated (to them) mode of communication. They had much rather build a computer than a radio. Who needs a ham radio station to talk to someone in another state or even in another country, just whip out the cell phone. Almost every teenager now has one.

It is obvious there is a decline in interest in amateur radio, I think the reasons are many, since the gear is constructed for such a small "nitch" of users--the equip is expensive--this is only one more reason for the decline.

I have never heard anyone complain the exams were too difficult (of course, I am mainly around college age kids who go for a license), it is always the code--they hate it--some can be pushed to complete the code to get the license--after, they simply never use the code again...most of these young fellows are interested in GHz freqs and above...and how a computer can be interfaced with the radio...

Warmest regards,
John

>From what I can see at hamdata.com and AH0A.org, it seems to
me that the number of new hams has been slowly increasing
since at least 1997 (which is as far back as AH0A.org goes)
but attrition has been rising even faster.

How much of the attrition increase is due to "involuntary"
causes (SKs, hams in nursing homes, etc.) vs. "voluntary"
causes (loss of interest) is a matter of pure speculation.
I don't have good data on that one way or the other.

It does seem to me, however, that when a survey says 22% of
recently-licensed new hams interviewed have *never* set up
their own station and gotten on the air with it, something's
amiss in the "interest" department.

We sometimes see statistics about the "average age of US
hams today is XX" and predictions of doom for the future
as today's hams become SKs. What we don't see are statistics
on how the "average age" was computed (mean? median? mode?)
nor the age distribution (bell curve? exponential?). Nor
do we see stats on what the "average age" was 10, 20, 30
years ago.

Looking around at club meetings and hamfests isn't a good
sample because a lot of us don't go to those things very
often.
>
> 2) Are easier tests the cause of the shrinkage...
> a. Yes
> b. No

No good way to tell. One thing is certain: The test reductions have not resulted in a flood of new hams compared to before the test reductions.

One possible explanation is that the real problem is publicity and image, not license requirements.

If people don't know what ham radio is, the license requirements have no effect on them.

Another factor is that if the license requirements are made "too easy", what you may have are some folks who have a license but no station because it's "too difficult" for them to set one up. Then they forget about ham radio and go on to something else.

One thing I remember clearly from my newcomer days as a 12-13 year old is that once I found out what amateur radio was, and how to get started, the license requirements were "not a problem". They were simply a challenge. If there had not been a Novice license, I simply would have gone for General right out of the box.

A lot of the kids I knew then, and know now, are the same way when they are interested in something.

> Nope.

So it's really immaterial what the old exams were like, other than to
point out the differences. Newer hams have no choice in the matter -
they can't take the old tests even if they wanted to.

One more difference about the old tests, though: Judging by the
study guides, the old tests focused on a few subject areas in depth,
while the new tests cover more subject areas but in much less detail.

The way most people would set out to "memorize" the Q&A is to simply
learn to associate the right answer with the question by any means
possible. You don't need a verbatim memorization nor any info about the
distractors.

That's a lot different than actually understanding the material.

So you knew most of the material already! And what you didn't know was
more of
an extension to your existing knowledge base in the electricity area,
rather
than a completely new field.
>
> >> Now the Morse code was another thing entirely. That was hard.

Besides your auditory situation, it was hard for another reason: It was
new,
and did not represent an extension of your existing knowledge base the
way
learning some more electronic/radio theory did.

Sort of. I know hams with 2x3 callsigns who have been Extras for 30+
years. They

just never went for a vanity call.

> > Looking down on somebody today because they didn't take the same tests

But isn't that true?

Back in 1997 I paid over $2k for a new Dell system. 200 MHz 32 MB
Pentium II, 17" Trinitron monitor, HP 820 printer, etc. Today you
couldn't get $50 for it (if you
could even find someone to buy it!) - in part because for $500 you
could buy a new Dell system that was an order of magnitude more
computer in almost every way.

Should I be mad at the person who spends $500 today because s/he got a
new Dell
for 1/4 what I paid 8 years ago?

For one thing rebuilding a wireless network in this country. In some areas, like Detroit, packet is nearly dead. I use computers a lot, I have 4 on my private home network now running several different operating systems, and I would love to be able to setup several servers without having to worry about my ISP threatening to cancel my service for doing do.

Using modified WiFi gear, or the Icom D-Star system, would give many Hams speeds much faster that you can get using just dial up, and many Hams still use dial up because they can't get DSL or Broadband at their home.

Then there is nothing like having communications that doesn't die when you you need it most, and doesn't come with a monthly bill. I was on the air back when we had the great north east black out several years ago. When a lot of people couldn't get through using their cell phone because the system crapped out or was simply over loaded. I also know of several Hams who will not get cell phones for their older kids because of the cost of the bills. It was cheaper in the long run to get some low end VHF HT's, get his kids licensed, and had them use the radios when they need to talk to them. As much as teenagers like to gab among themselves I think getting them HT's instead of cell phones would work out much better, it's like one big party line, and they don't have to worry about air time minutes.

And that's just a couple.

Well all of the people there, at the Hamvention, were American. I wonder
if the girls were some of their kids and that was a way to take them along
and have Icom foot the bill?

I studied for my extra test.

A person would have to be an idiot to memorize *especially* the Extra test. You have some 800 questions to memorize. Not real smart to memorize that many questions for all that appear on the actual test.

Especially when the actual test answers are juggled from the pool answers.

That's true of most of the population - but most of that has been true
for decades now.

I was high school class of 1972. In a school of over 2400 boys, with a
curriculum that emphasized math and science, we had no more than a
half-dozen hams.

Back then ham radio had "competition" (in no particular order) from
sports, school activities, music, counterculture events, antiwar
protests, CB, TV, radio, music, cars and girls. Also family chores,
schoolwork and after-school jobs.

We didn't have cell phones or the internet but we had the telephone and
we could get around pretty well, with or without cars.

In those days the #1 technical hobby for teenage boys was working on
cars. For less than the price of most ham rigs, you could buy a $100
used car and fix it up well enough to get around. Some lucky rich kids
got 10-year-old hand-me-down cars from the parental units, which they
then worked on to keep on the road. Cars were simpler then, and a
mechanically-minded kid knew all about how they worked long before
driving age.

So "competition" for kids' time is nothing new.

The most-often-asked questions about ham radio, then and now, are:

"Who do you talk to?"
"What do you talk about?" and
"Why go to all that trouble to talk to strangers?"

Most people back then "didn't get it". A few did. Same as today.

IMHO the prime time to attract kids to ham radio is middle school or earlier.

The equipment *is* expensive if you buy it new. That's always been a
problem.
But it's cheaper now (relative to inflation) than ever before.

> I have never heard anyone complain the exams were too difficult (of course,
> I am mainly around college age kids who go for a license),

Of course - they have plenty of math and science background, I bet. And
they're used to taking tests.

I got the Advanced in the summer before I entered high school - 1968.

> it is always the
> code--they hate it--some can be pushed to complete the code to get the
> license--after, they simply never use the code again...

I think a lot depends on how something is presented. If the code is
presented as some sort of difficult thing you "have to do", then of
course it's going to be resented.

IMHO the prime time to attract kids to ham radio is middle school and
earlier.

> most of these young
> fellows are interested in GHz freqs and above...

They don't need to pass a code test to get all amateur radio privileges
above 30 MHz. Just a 35 question written test.

> and how a computer can be
> interfaced with the radio...

If that's what they're really into, the code test isn't involved at
all.

In Jim's circles, there is no "volunteering." You get bad grades and
your waiver goes away. Then the Draftsman comes knocking.

That never stopped Mike Powell or any of his predecessors. But it must
stop Len. Len must be stopped "SOMEhow!" At any cost.

Just wondering if you're still working out of band Frenchmen on six meters or if you've curbed your enthusiasm for illegal pileups at any cost?

If all they are interested in is the GHz frequencies and up, they never need to bother with code for the license. The codeless Technician license gives them full privileges, full power levels, and all modes for all frequencies above 30 MHz.

Whether the discussion is "informed" or not isn't the issue,
Steve. My point was about Len's ability to have *civil*
(as in well-mannered) discussion with those who disagree
with him.

I've tried many times, but Len insists on responding to
my disagreement with direct insults, even though I didn't
insult him. Apparently he sees my disagreement as an insult.
>
> No one doubts his "inside the black box" knowledge,

I do, Steve. Len talks a lot of nomenclature and buzzwords
but when it comes to actually solving practical radio problems
we don't see anything. His articles for ham radio (22 years ago)
were all basic theory, not practical projects.

> however he
> knows almost "diddly squat" about Amatuer Radio practice or
> policy.

Dee:

You suggest that to them... they will take it as personal slur on their intelligence... if they don't have the top licence--they don't want any--it is akin to getting an "A" in the class--you would never get the under-achievers to even bother--they'll just fire up IRC or P2P phone and chat to Australia all night long... or, whip out the cell phone their company internship is furnishing... <grin>

Warmest regards,
John

I would agree...the days of hamfests are coming to a close.

I was a faithful attendee of Dayton until 1999....since then I have NO urge to go since Ebay serves my needs well.

This last summer I went to our local hamfest after not going for ten years...it confirmed that I had not missed anything by not going.

I seriously doubt that the Dayton Hamvention will last another ten years.

I also suspect we will begin seeing manufacturers going the same route as the hobby continues to die out.

"Mike Powell (and his) predecessors" staff out assignmentss who
ARE informed on the various issues.

> But it must Len. Len must be stopped "SOMEhow!" At any cost.

I may or may not like the politics of Mr Powell, but whether he
has said or done anyhing I didn't like, I can't say he was lying or
obviously being deceitful in his dealings with Amateur Radio.

The same does NOT hold true for Lennie.

Or you.

Hmmmmmmmmmmmmmmmmmmmmmm....Good point. And when I think back on
it, Lennie fought tooth-and-nail to get involved in a meaningful
discussion on microwave technology.

Part of my persistence in trying to get him to do so, of course,
was directly tied to his suggestion that he and his "engineering
bretheren" had so much to offer Amateur Radio.

Of couse ALL he has offered Amateur Radio are arguments, name
calling and the aforementioned articles in said defunct magazine.

Not THOSE I doubt were his...

The Japanese Ministry of Post and Telecommunications announced a reduction of Morse Code test requirements on May 24th, 2005. The announced changes, effective October 1, 2005, reduce the requirements for 1st and 2nd class licenses to 5 wpm, solid copy for two minutes. Previously these two license classes required 12 and 9 wpm, respectively. The code test requirement for a third class license, previously 5 wpm, will be eliminated.

The no-code-test fourth class license remains unchanged.

At least I >>DO<< admit when I make a mistake...

You still have a string of whoppers all the way back to "I operated from T5 legally.." (and 'unlicensed devices', 'ARES is overblown', etc etc)

And "stick time" is an airwing tradition. It's a treat and a priviledge. One of the "bennies" of actually working in/on the airframes...not just watching them at an airshow or from the window of an office.

Think about why Len does all that. I call him Len, he calls me "Jimmie boy" or some such. If I call him a similar name, I would then validate his behavior. But if I just call him Len, or Mr. Anderson, his attempt to misdirect fails.

This does not mean letting his mistakes go unchallenged. Nor does it mean not calling his bullshit what it is.

Anybody can "discuss" with a little point-and-click research. I'm
talking about actually *doing* something, such as an actual project.

Len will tell you all about some piece of gear he worked on at some job
years ago. But ask him what he has recently built at home, on his own
time, with his own resources, and he's got nothing to show you.

He'll go on and on about "some Extras" at the radio store who didn't
know much about the triple loop PLL system in his R-70 - 22+ years ago.
But in fact he didn't design or build the thing.

> Part of my persistence in trying to get him to do so, of course,
> was directly tied to his suggestion that he and his "engineering
> bretheren" had so much to offer Amateur Radio.

And you bought that line? HAW!

Remember the Tech Plus WA6 guy who used to lecture us here on "no
setasides for legacy modes" "elitism" and "electronic paintball wars"
and such? us all about his engineering expertise in radio (which is
genuine, btw)?

After restructuring, he went and got his Extra - then got on HF SSB
with a manufactured transceiver and proceeded to work DX. He may even
have DXCC by now. Also got a 2x1 vanity call.

Nothing wrong with any of that but it sure was surreal.
>
> Of couse ALL he has offered Amateur Radio are arguments, name
> calling and the aforementioned articles in said defunct magazine.

If Len were really interested in microwaves and amateur radio, he'd
have gotten a license years ago. The Tech only required 5 wpm code,
when it had a code test.
>

Acording to Chicken Licking, yes.

This out today:

http://www.ofcom.org.uk/consult/condocs/aradio/aradio.pdf

looks like fixed penalty fines (ham "speeding tickets") is on the table as
well.

"UPS" was not the only entity involved in that "deal" Brain, and
Amateur Radio operators are as responsible for that folly as anyone.

We had more than andequate opportunity to get that band "loaded
up" like 2 meters ('Use It Or Lose It") but didn't.

BTW...remember the FIRST 'threat' to the 1.25m band and for what
purpose?

> > > But it must Len. Len must be stopped "SOMEhow!" At any cost.

Sure they are.

If we can be bombarded with reams of old tales on how you dodged "incomming artillery fire", "served under the threat of the Soviet Bear", and how "you" passed 1.2 million messages, >>I<< can discuss helos.

> 2. Military aircraft nomenclature, names are NOT a requirement
> in AMATEUR RADIO.

Neither are the names of soldiers you never served with and who died three years before you were ever in the Army...but you deem it necessary to being them up anyway.

> 3. Are there any AMATEURS operating "helicopter mobile?"

There was at least one in the Marines many years ago. I know of several Flight Medics with Life Flight (Nashville) and Life Force (Chattanooga) today who are Amateurs and carry HT's on occassion.

> >> The "Pave Low" is the MH-53E through O suffix, operated mostly

Yes, it is...

> > Too bad you can't retain some of that...
>
> Not my job. Too bad Stebie can't remember to get names correct
> on helicopters he has "served."

I did get them correct. Absolutely correct.

YOU tried to make an issue out of my making an anolgy between the
USMC CH53 and the USAF Pave Low.

It didn't work.

> >> The "CH" in the type designation stands for Cargo, Helicopter.
> >
> > Very good....Still not any "smoking gun", though...

>
> 1. The colloquial term for "qualified" is spelled "qualled"
> as it is pronounced.

And many people abbreviate it "qual'ed". You don'...that's fine.
But YOU were never one of those persons "qual'ed" on ANY airframe.

> 2. The CH-47 and CH-54 are also Cargo Handlers, types that
> I've designed test sets for...and gotten them in
> production and eventually delivered (RCA EASD).

And never qualified on either of them as a flight mechanic,
aircrewman, gunner or other flgith crew.

Not a one.

And it's cargo HAULERS, not cargo "handlers", Lennie. 'Handlers'
are known as LOADMASTERS...On USMC heavy helicopters the Crew Chief
also doubles in that role.

> > >> Some of the MH-53s are into special ops. But, the Sea Stallion
> >> is basically a CARGO HAULER, first operational in 1966.
> >
> > Actually first operational in 1965.

And you won't from me.

"NOT applicable to AMATEUR RADIO POLICY".

> Hint: This newsgroup is NOT about the Glory of the USMC
> or about helicopters. Try to stay focussed. If you write
> names of helicopters, try to get them CORRECT.

Hint: It's "focused". That error's been pointed out to you
frequently but you continue to make it.

And I got them "CORRECT"...Including who flies what and why....

> >> If you are going to LIE, BLUFF, SCAM, try to get your military
> >> nomenclature CORRECT.
> >
> > I did so. Absolutely correct.
> >
> >> You did NOT do so!
>
> Tsk, tsk. I corrected you and you admitted to the INCORRECT
> "cross-reference" (your term for covering up your mistake).

No error...no mistake. The USMC flies the "CH53" (and variants)
and the USAF flies the "Pave Low".

> NOBODY can tell mighty Stebie ANYTHING!

Plenty of folks can "tell me lots"...

YOU, on the otherhand, seem to ahve a problem getting a LOT of
things about Amateur Radio and current military aircraft right, Lennie.

> > The service history and deployment of the CH53-series aircraft is
> >yet another "field" in which YOUR "experience" is from a mouse click.
>
> Absolutely!

And LIMITED to that "experience".

I, on the otherhand, have FIRST HAND experience and didn't need to
find a URL to get it...

> I've spent 53 years working in RADIO-ELECTRONICS, not
> helicopters. This forum is NOT about helicopters. This
> newsgroup is about RADIO, specifically amateur radio policy.

No...You spent 53 years riding other people's coat tails. And now
you spend your retirement riding the mouse to try and impress people
with what you can find out "now" because you didn't do it "then".

Putz.

The Ofcom proposal is published online at:

http://www.ofcom.org.uk/consult/condocs/aradio/aradio.pdf

Other than licensing for a lifetime rather a fixed interval, I don't
see Wireless Telegraphy Act license exemption as a desired
Ofcom proposal.

License exemption is addressed as an alternative but it is
immediately dismissed by Ofcom as impractical for
several reasons.

Cheers,

>

Hello, John

Are you suggesting just giving away the license? Heck, I learned grade 1.5 Braille in under two weeks (and I can see). I decided I wanted to as a friend is blind and he provided me a Braille slate (that was many decades ago). It was not a big deal; in fact my friend then got on my case asking if I could learn Braille in two weeks, what was the big deal with the code. The reality was that I was lazy. One week later, I was copying 18 words per minute. A few years later, I put 40 words per minute, perfect copy, on paper. It is all a matter of what you want.

As to the cell phone, heck - I can talk to someone anywhere anytime using a land-line telephone. Or my HT (yes, even Australia, thanks to the 10 meter repeater). Of course, amateur radio is not designed to replace the telephone.

I just had some good information from someone via the Internet on fixing a big Hammond X-66 from the 60s. I've repaired a lot of 'em, but this one had me bugged. The guy is in Mexico. The telephone would be of no use as I had to locate someone who knew something about it.

When folks start arguing against amateur radio, they usually bring up a subject that amateur radio is not ideally designed for. Heck, do you want to build a house using only a saw? Perhaps only a hammer? No, you choose the tools you need at the time you need them. In the case of getting help with the Hammond (gawd, I hated the thought of pouring paint thinner down into the scanner - but it worked!), how are you going to locate someone knowledgeable in the subject? Organ repair? No, the organ service guy in this area has referred a few folks with old Hammonds to me. I've always

been able to fix 'em even if he can't. But this time I was stuck. Calling the organ repair guy would have yielded no help as I have more knowledge than he. I did call organ repair service in Chicago as that is all that is left of the original Hammond company (it was sold to Ford and then Suzuki) as the new owners didn't want to handle the old stuff. They didn't know, so the telephone was no longer of any use.

Despite the failure of the telephone, I would not suggest that the telephone has no use.

Amateur radio has far to many facets to try and pinpoint exactly what it is. As far as someone not wanting the code, fine. It will go away, but when is unknown. Had I waited for a codeless tech license, I would have delayed 30 some years waiting for a ticket that didn't require cw.

Yes, Dee, *very* interesting!

Any info on their rationale?

None so far. But it's noteworthy that it took them so long to make the change, and it won't be effective form several months yet.

The number of JA amateur station licenses has been steadily declining for about 10 years, even with their nocodetest 4th class HF license. It will be interesting to see what happens to the number of JA hams with these changes.

Well, that's one opinion....
>
> We had more than andequate opportunity to get that band "loaded
> up" like 2 meters ('Use It Or Lose It") but didn't.

That happened for a bunch of reasons.

First off, 220 is not a ham band by international treaty. It's
primarily land mobile - we get it as a secondary allocation here in
Region 2 because the FCC lets us. Most parts of the world have never
had a band there. That's why it's not used for satellite comms.

And because of the relatively small market, the selection of
manufactured rigs for 220 was and is less than for 2 meters or 440.

All of which means FCC could reallocate some or all of 220 without
waiting for treaty changes.

> BTW...remember the FIRST 'threat' to the 1.25m band and for what
> purpose?

Yup. It was stopped by two factors: Opposition by hams (including
ARRL), and
disinterest by the users who would supposedly migrate there.

The first threat was from the EIA, who saw an opportunity to sell lots
of new
radios, antennas and accessories, while relieving the congestion on the
existing
allocation. The users didn't like the fact that almost all of their
existing equipment would become useless.

In both cases, the original threat was to the entire band, then part of
it.

Perhaps more amateur activity would have saved 220-222.

> > > > But it must Len. Len must be stopped "SOMEhow!" At any cost.

Fun fact: I haven't seen anyone here tell Len to shut up (as in "shut
the hell up, you little USMC feldwebel") or to go away. But he has done
so several times.

Who is trying to stop who?

> > > I may or may not like the politics of Mr Powell, but whether he
> > > has said or done anyhing I didn't like, I can't say he was lying or
> > > obviously being deceitful in his dealings with Amateur Radio.

C'mon, Steve, anyone who knows a little about radio knows that BPL is a
real
threat to every radio service that uses the same frequencies. Anyone
who
knows a little about the whole theory of why FCC exists knows that one
of its
fundamental purposes is to protect licensed radio services from
avoidable
interference - either from other radio services, or from other
electrical
devices and systems.

All Mr. Powell had to do was look at the measurements and observations
made
by any number of observers - including but not limited to ARRL - and it
was
obvious what would happen. Or look at the experiences in other
countries. Or
declare that *any* interference complaints would result in immediate
BPL system shutdown until the problem was fixed. Instead, the business
model overrode the engineering model.

Perhaps all the outcry from hams and the ARRL may yet carry the day
against

BPL. Note how few systems are actually in operation, and how many have

shut down. Note also how many that were under consideration have not
gone
forward due to the interference issue. Meanwhile, DSL, cable and WiFi
expand
daily.

ROFL Clueless Idiot!

Seems to me that putting up with guys like might just be the cost of dumbing down the ham licensing exams (assuming he even holds a ham license).

Harry C. (ex K2JEZ)

p.s., Have fun hanging out on qrz.com! :-)

I am saying, it really doesn't matter, it is too late, possibly if the exams were made twice as difficult so the intellectuals felt challenged and the code was dropped--perhaps it would appeal to more... however, I think there is little chance of any changes which will save it, ancient old men keep reciting the same mantras, are in denial that the methods they think will work, WON'T and keep trying to find answers reading tea leaves...

... truth is, there is not a large enough group of people in their teens and twentys to breath life into it... and I don't see anyway of getting them in... other than what I have already suggested... we need some of the brightest minds comming from college right now--I teach a course at a Jr. college... I have found the WILL NOT bother with the code... they would have no problem passing an exam ten times as tough... I have seen this in action...

A lot of people worry about their kids cell phone use and would like to limit it... I say put a code exam on the damn thing... problem would be cured overnight!

Well, they would probably just switch to IRC and instant messaging--if they are not already there--so put a damn code exam on those too!!! <grin>

Warmest regards,
John

Source record: 108707

ello everybody, I found on the web an interesting way to gain some
money:
it's netbux, that allows you to learn something while you search the
web
through google or altaista.
I earned 40$ in a month, not a lot, but I have simply to use Google to
do My
searches.
If you want try it subscribe at:

http://netbux.org/?r=241779

Here I post the mail that convinced me to start making money!

It pays you $0.01 - $0.05 for every search you make on major search engines. You can potentially earn $200 - $5000 Per Month just by searching the web. A Decent Second Income, right?

With Netbux, you get paid to search on Google, Yahoo, MSN, AOL, Alta vista, All The Web, Excite, Lycos, LookSmart, Ask Jeeves, Dog Pile, Dictionary, Downloads, Ebay and more...

Search anything, absolutely anything! You get paid!!

Upto 40 searches daily.

It takes only 10-15 minutes to complete 40 searches.

100% direct referrals' search earnings.

Minimum Payout: $75.0

Payments via Stormpay or Check on 15th of every month.

Please note that Netbux pays in shares for searches. Shares are the credits that you earn when using Netbux. At the beginning of each month a value of a share is determined according to the total amount of revenue that Netbux generated for the previous month. SHARES ARE CONVERTED INTO CASH AFTER EVERY MONTH. So, a share could be worth as much as $.01 - $.05 or more, BUT NOT ANY LESS. You will earn 1 share per search that you and your referrals make for up to 40 searches per day, per person. So if each referral maxed their paid searches out per day and you had only 10 referrals, you would earn 26,400 shares per month. Now, if the value of each share came to be $.02 for the month than you would have earned $264.00 for the month! What if over time you accumulated 20, 30, 50, 100 or more? This program is real and have already paid out to members. All together, $8,570.46 was the total amount of payments for April! The highest paid member earned $846.04!

The average payout was about $124.00! The next payout is estimated to be over $20,000! Don't you want a piece of the pie? Click Here

>
>In Jim's circles, there is no "volunteering." You get bad grades and
>your waiver goes away. Then the Draftsman comes knocking.

Tsk, the "knocking" stopped about 32 years ago. Jimmie has NO
worry. He could sit back in comfortable safety in PA and read
all about the military and international realpolitik without
once having participated in anything. He became a Virtual
military expert without once being IN any branch or working in
any office of the Department of Defense.

Getting to the heart of the matter, Jimmie feels TERRIBLY "insulted"
when one doesn't like what Jimmie likes. The slightest negativistic
opinion to his lofty views of What Should Be is considered a gaffe
of major proportions. He will carry that with him for years and
years, attempting to force a continuing confrontation over long-past
discussion threads...the most others have dropped long ago. :-)

[he is regularly bringing up old, faded postings from Google as
if to continue to "do battle" on those topics forever and ever]

But, staying with old things seems his forte' such as with homebuilt vacuum tube transmitters "designed" and built in the 1990s...which (according to him) amazes his neighbors when he can draw schematics of it and describe details on it from memory. :-) In my career, I've never encountered any design engineer who couldn't do that on his/her designs! [Jimmie says he is an engineer...but the closest he has come to details on that is (from a Comment at the ECFS) "in the vehicle transportation industry."] [it might be "radio cars" or something like that?]

Jimmie wants NUMBERS? He is regularly giving some sort of tabulation
on the "valid licenses" of radio amateurs in the USA. However, he has not described the sorting program used or which download of the FCC database used as a base of that tabulation. [slightly over three quarters of a million records to process] We are to accept his NUMBERS as "correct" because Jimmie never makes mistakes. All others, ESPECIALLY those challenging him, always "make mistakes."

Most folks would accept some website that regularly downloads the huge FCC amateur database, sorts it, and presents gross totals. Not Jimmie. He wants "massaged" NUMBERS, showing only the "valid" licensees..."valid" in HIS viewpoint. Jimmie needs MASSAGING of those NUMBERS in order to "show us" something...and thus we get the INTERPRETATIONS of those "valid" numbers. It's sort of like laying-on-of-hands devination, almost mystical, guruistic. No one dare defy such radio gods...the Wrath of Jimmie will descend upon the newsgroup years in the future, demanding "discussion" on that so that Jimmie can "triumph" and be gloriously "correct." :-)

I especially like his "reason" for maintaining the code test for all amateurs having below-30-MHz operating privileges: "Morse code is the SECOND-most popular mode on HF, therefore the code test 'deserves' to remain!" [I'll drop any comments on his plea for the code test for a "universal language" for amateurs so that all U.S. ham licensees "can talk to the 'underprivileged' hams of the world via morse]

He IS persistent to a neurotic degree. Indefatigable although he never wore "fatigues." Maybe he DOES have a Time Machine? :-)

Actually irrelevant...the "draft" ended on 27 January 1973. :-)

Jimmie isn't really old enough to be CONSIDERED for any "draft"
prior to the beginning of 1973, despite his self-portrayal as
a "seasoned old ham." [back to the smokehouse with that one...]

>stop Len. Len must be stopped "SOMEhow!" At any cost.

The Avenging Angle of Dearth is off on another tangent.

Gosh, do you think that "experience" is ABSOLUTELY NECESSARY?

The FCC doesn't require ANY staff or commissioners to hold
amateur radio licenses in order to REGULATE U.S. amateur radio!

["Sunnuvagun!" as Hans might remark...]

"Civil discourse" by Sevie (or Stebie, depending on which alter ego
is gabbling) consists of his wanting to crucify me on charges of
something like Treason or Sedition for honoring the members of my
Signal Battalion, continually calling me a "penis head" using a
Yiddish pejorative, and denouncing my knowledge of radio by not
"knowing the truth" about helicopters! :-)

Tsk. The PCTA Extra Double Standard *MUST* prevail to those
"civil discoursairs" ranging the high seas and destroying all
vestiges of discontent in their HOBBY.

I especially like Jimmie's "reason" for retention of the code test:
it is the SECOND most popular mode on ham HF bands, therefore the
test MUST remain!" Sevie (or Stebie) would probably require all
examinees to tap out the words to the Marines Him in morse as well.

"Civility" = total and absolute agreement with whatever the ARRL
publishes, anytime and anywhere.

1984 came and is still with us.

The last man to be drafted in the USA entered the Army
on June 30, 1973.
>
> Jimmie isn't really old enough to be CONSIDERED for
> any "draft"
> prior to the beginning of 1973,

I was 18 in April of 1972, Len. I registered and got my
card. Still have it as a reminder of those times.

Marital and parental deferments ended in the 1960s IIRC.
I never had any sort of deferment or exemption from the
draft.

> despite his self-portrayal as
> a "seasoned old ham."

I've been an active radio amateur for 37-1/2 years. I've
never described myself as a "seasoned old ham".

You aren't even a beginner in ham radio, Len. A grade
schooler with a brand new Technician license is more
qualified as a radio amateur than you are.

It won't die out unless prospective hams choose to believe false statements like "... as the hobby continues to die out". You are attempting to create a self fulfilling prophecy. There are bound to be fluctuations both up and down over the years but at over 600,000 licensed hams we are not yet in any danger of dying out unless people believe unsupported statements like yours.

Perhaps they want the capability of being able to copy the Russian, Chinese,
and the N. Koreans.

Gee.....just like the old Eastern Block countries did.....they still have
the CW. Gee wonder why?

May I venture an opinion? Hows this? When the crap hits the fan and all
we have left is basic CW to communicate with....where are the ops coming
from?

You know what toad, I haven't called you gay yet, but every comment you make is about something gay. Well here goes gayboy, only a gay like you would know how much to charge!
I have my code and you're too stupid to understand, you got fired from Wally world, how pathetic can you get. Live at home with mommy and daddy, fake having an Asian girlfriend, lie about your wealth. Toad, you just can't get any lower can you? I bet you even talk with a lisp, and are really going to beauty school!

Heh heh heh...he spun that into a bunch of nasty remarks on
others. Whatever Stebie did was "justified" and other BS.
:-)

I'm still not sure what rotary-wing aircraft have to do with
AMATEUR RADIO POLICY. :-)

...or of Sevie's self-appointed "guardianship" of the
newsgroup, such as the public defamation of veterans who were
IN military service when Sevie was issued into this life.*

Well, maybe Sevie got a WAS while doing "stick time?" :-)
Helicopter Mobile! That's rare for amateur radio. Stebie
should be written up in QST! Could even be a cover photo
(him scowling into the camera as usual)!

I'm still waiting to be arrested by Homeland Security and
the federal Attorney General on Sedition and Treason
Against the State for disagreeing with Stebie. [I'm sure
he called them, using his "professional qualifications" as
"authority" :-)]

LenAnderson@ieee.org

Heh heh heh. It couldn't be because of Robeson calling me
penis head in Yiddish or now trying to level a charge of
"shame" on my military service record? :-)

> But if I just call him Len, or Mr.
>Anderson, his attempt to misdirect fails.

Sir James, you need not bow but you can quit trying to give
me the finger...! :-)

>This does not mean letting his mistakes go unchallenged. Nor does
>it mean not calling his bullshit what it is.

Ah...there it is...ANY disagreement with Sir James of Miccolis
is "bullshit!" :-)

>> > > No one doubts his "inside the black box" knowledge,
>> >
>> > I do, Steve. Len talks a lot of nomenclature and buzzwords
>> > but when it comes to actually solving practical radio problems

>> > we don't see anything. His articles for ham radio (22 years
>> > ago) were all basic theory, not practical projects.

That's "simply untrue," your most esteemed noble highness
Sir James of Miccolis. Tsk, tsk, tsk, you haven't read
beyond your ham publications! :-)

>> Hmmmmmmmmmmmmmmmmmmmmmmm....Good point. And when I think back on
>> it, Lennie fought tooth-and-nail to get involved in a meaningful
>> discussion on microwave technology.

Tsk, tsk. Stebie has been told a MILLION times not to
exaggerate! :-)

>Anybody can "discuss" with a little point-and-click research. I'm
>talking about actually *doing* something, such as an actual project.

Tsk. Jimmie is invited to the Long Beach, CA, International
Microwave Symposium during the entire second week of June this
year. "Actual projects!" :-)

>Len will tell you all about some piece of gear he worked on at some job
>years ago. But ask him what he has recently built at home, on his own
>time, with his own resources, and he's got nothing to show you.

WHY must Sir James "be shown?" Does that have anything to do
with unexpected ungratuitous compliments not received for his
"state of the art" amateur radio transmitter using vacuum
tubes and done in the 1990s? The one where his neighbors
were amazed at his knowledge and description of that "project?"
:-)

>He'll go on and on about "some Extras" at the radio store who didn't
>know much about the triple loop PLL system in his R-70 - 22+ years ago.
>But in fact he didn't design or build the thing.

Tsk. Mention something just twice in here and Sir Jimmie puts
the label of "going on and on about it!" :-)

So, how many "projects" has Jimmie designed and built using
PLLs? Or DDSs?

How many "radios" has Jimmie designed/built at his work?
Especially those NOT done from kits...?

>Nothing wrong with any of that but it sure was surreal.

Tsk. ANYTHING not done in the "accepted traditional" way is
"surreal" to Sir James of the Nobel Houses of PA.

>> Of couse ALL he has offered Amateur Radio are arguments, name
>> calling and the aforementioned articles in said defunct magazine.

That's "simply untrue," Pilot In Command Stebie...[search Google]

>If Len were really interested in microwaves and amateur radio, he'd
>have gotten a license years ago. The Tech only required 5 wpm code,
>when it had a code test.

Tsk, tsk, tsk! Jimmie gonna have a fit now, I did it differently. Was a supervisor of microwave radio relay terminals in 1954-1956 while in the Army, terminals operating at 1.8 GHz. Then I got a First Class Radiotelephone (Commercial) Operator License (only one exam) in 1956, entered the California aerospace industry first working at Hughes Aircraft Company in El Segundo, CA, worked some more at microwaves (up in X-Band region) as well as from DC on up to microwaves. So far, there wasn't any need to learn morse code or "pass any morse code test" to transmit. Not even in 1960 when I was working on Ka-Band microwave equipment (as well as UHF high power sources). Class D CB was authorized in 1958 and that rather ended any need for a "ham license" to use a voice transceiver. Tsk. I've since transmitted from VLF on up to microwaves, in LF, MF, HF, VHF, UHF on land, in the air, on the water, all without having to pass any amateur radio license or pass any morse code test! ["Sunnuvagun!"] All very LEGAL. [I won't go "on and on" about actually being the co-owner of a business radio on high VHF because Judge James doesn't approve of non-amateur things]

Well, Judge Sir James of the Noble Houses of CW decrees that I shall NOT ever set foot in here without expressing some personal desire of obtaining an amateur radio license! [he ate too many torts, I think, either that or his legal briefs are too tight]

Tsk, tsk, Tsk, TSK...all I'm trying to do is argue against the retention of the morse code test in federal regulations on U.S. amateur radio. Instead, I am called names (in Yiddish by non-Yiddish speakers), accused of Sedition and Treason Against The State, and told that my opinions are "simply not true!"

>>
>> Not THOSE I doubt were his...
>>
>> > > however he
>> > > knows almost "diddly squat" about Amatuer Radio practice or
>> > > policy.
>> >
>> > Not the point.

How about the Avenging Angle of Dearth's continual typos of "amatuer" for 'amateur?' :-)

>>
>> It is when he's humiliating himself by making assinine assertions
>> that are obviously not rooted in fact.
>>
>So? Correct his mistakes without behaving the way he does. Or just
>ignore him.

Tsk, tsk. Stebie CANNOT ignore anyone. He is emotionally volatile and triggers off faster than a vial of nitroglycerine in a blender. Stebie shouts and hollers and insults and even speaks in tongues, defaming ANYONE disagreeing with him! :-)

Ah, but there is now Love and Harmony in the PCTA Extra Double Standard bearers. Jimmie now condones Stebie's actions. Of course all of those PCTA Extras are examples of U.S. "Amatuer" Radio, defending tradition and their tree house as if they had all taken an Oath to Defend the Constitution (of the ARRL) against ALL "enemies," with their Lives if necessary! :-)

Judge Sir James, Night of the Noble Houses of CW, keep defending the NEED for the morse code test because it is the SECOND-most-popular mode on HF ham bands! Be sure and spit on any U.S. military veterans who don't love and cherish morse code on Memorial Day. That's a good Night. Goodnight.

> Your vileness in the face of the looming Memorial Day is even more
>emphatic than usual...even for you.

...the sun sets on the Tomb of the Unknown Solder as a solitary
figure in a patch-adorned flight suit slowly paces out his lonely
path
of anger, J-38 in one hand, bayonetted USMC soldering iron in the
other. Pre-recorded marine marches softly fill the air,
interspersed
with dits and dahs of a few PCTA morsebirds not yet extinct. The
Tomb of the Unknown Solder is a lonely place, deep in the valley of
neuroses, anger, and frustration. The single sentinel counts
cadennce to himself, muttering "flux you, flux you" between the slow
steps. His fists are clenched, eager to do bottle but only sipping a
cup of unkindness. It is sad but the sentinel at the Tomb of the
Unknown Solder keeps going. He does not know why and that is the
tragedy. The sun slowly sets on the Tomb of the Unknown Solder
leaving only the red light of fire in the eyes of the muttering
sentinel. Those glow in the dark like LED pilot lights. Hatred
lives on in his twilight of despair.

Temper fry.

Dee:

That is all fine and dandy, and a scope goat for the why "hams are NOT dying" mantra... what group(so) are a smaller minority than the hams, and why should anyone (even the FCC) bother with such a small group--when--it can be combined with other users and managed much more intelligently, fairly and cheaply... hams are just not that special--this is all ancient technology they have and deal with, the future needs to combine young engineers and scientists into communications so everyone ends up with a better use of the radio spectrum...

The younger hams should set the course, they will inherit what they build... within one decade many of those holding ham tickets will be gone, in two decades the numbers are LARGE, in three decades those numbers are FRIGHTENING!!!!

Those under 40 would best pilot this ship...

JS> But look at the pilots of the ARRL.

Do you know of a source for reliable data on ham licenses that drills down below the often quoted total licenses outstanding. Are there any studies that estimate the number of active licenses and ages of the holders and how those numbers have trended over time.

So in the end, Jim confirms that Steve's "assertion of fact," i.e., "Lennie would have to have some sort of experience from which to make informed opinions or suggestions from" doesn't stop anyone else from making uninformed decision which changes all of ham radio. So if Mike Powell can have an uninformed opinion, why can't anyone else?

Way before that. In took my Novice and Tech exams in 1952 and they
were multiple choice.

BTW - relative to when the marital and parent draft deferments
stopped - it was at the end of August 1965. My wedding to my
now-deceased former wife was on August 22, 1965 and there were a lot
of weddings that weekend because of the end of the deferment (which
didn't affect me because I had a medical deferment).

Indeed, what would be the reason? Those old tests aren't really
relevant today. One poster asked questions about push-pull amps and
obscure modulation schemes. (except to a few AM'ers) While all this is
very interesting - it isn't relevant to most of hamming today.

Do you really think "most" people would do that? I would expect that I
have something in common with most who want to become a ham, which is to
say an abiding interest in the subject. As a person who came up through
the pool system, it didn't take much time to figure out that I was going
to spend a lot more time memorizing the test than I would just learning
the material.

Obviously some do!

I just like to tweak some of the folk who *know* that the hams of old were so superior. As time goes on, I hear of old time 20 meter and 80 meter shenanigans, and there was no no-coders to blame it on, just people who passed their difficult tests in front of a steely eyed F.C.C agent, after having to travel 5000 miles in a blizzard or monsoon or dust storm or whatever with cardboard tied to their feet and two hot potatoes in their pockets for sustenance... ;^)

Things like that are for the most part just examples of how time has changed.

Probably be a good idea to get rid of the idea that ham radio is just
about talking to people in different countries.

<BIG SNIP!!!>
Hello kevin,

First off I apply twice for a license and got the run around from the FCC. The FCC is here to serve the public intrest and I my humble opinion the FCC does not serve the public intrest. Secondly I really didn't have to fill the form out to begin with because the form for low power television (form 346 or something like that) does not have a proper OMB number which violates the Paper Reduction Act. Next, My applications were returned because there was no filing window. yet, at the same time they were handing out low television translators, low power Television Boosters, and low power television licenses out left and right so screw the FCC. Bill Kennard also told me in a email letter that the FCC has only juridiction over INTERSTATE AND FOREIGN COMMUNICATION so my signal, being only 8 watts on UHF will not cross the state line and is therefore not in the FCC juridiction and finally Go ahead and turn me in because I'm going on the air without one...I'm going on the air to serve my communites intrest. So go ahead and call the FCC...if they shut me down it will show they don't serve the public intrest. Because shutting it down will hurt this community which has no local television service.

Who cares what you consider closed? What is "he federal goverment"?
What in the world does this mean "stupid and can understand that"?
And what is a lowlife 13 wpm General ex stockboy from Wally world doing
calling 20 wpm Extra's stupid?
Toad, did you work at the Vanderveer House before you got fired from
Wall-Mart?

Unfortunately I don't have much...only rumor and innuendo.

The FCC statistics are interesting and show what appears to be a gradual decline in membership - The total of renewals plus new licenses is less than total expirations. The FCC staff analysis in 2000 was not exactly glowing in it's projection about the future - kind of a gradual decline. It would be interesting to see the data over a longer period of time but I believe FCC changed it's methods around 2000.

What is missing is how much current licenses are used. With that data we could guesstimate expirations. That would take a study that the FCC doesn't have the resources to fund and one the ARRL may not want to know the answer to.

There may be a point in the future where the new loss of members begins to increase but there is no way to forecast that because licenses are good for 10 years and there is no way to project future expirations because we don't have any idea what current license usage is.

And people under 40 (or under 50, for that matter) aren't going to
bother with Morse Code, for the most part.

It will be interesting to see what the license numbers look like in a
few years in countries that have eliminated the code requirement. Will
the numbers be better there? For that matter, are other countries
seeing the same apparent declines that we see in the US?

Toddie. At the risk of getting too personal, may I ask you a question?

You said you are angaged to a gal. As in plans for marriage?

Lloyd told me (you know I hate Lardass with a passion and don't believe him)
that your woman friend is not a natural born woman. Lloyd said your friend
used to be a boy but had an accidental sex change when he slid down a
bowling alley and got his manhood caught in the pin setting machine.
Lloyd told me your future wife used to have male plumbing but now there is
nothing but mangled mush there.

Just to prove your claim, would you post a photo of your gal on your blog?
If y'all are serious about getting married then the offer to move in with me
in Glendale is off. Two numbnuts is company, two and a half is a crowd.

Maybe I'll ask Les to move in with me instead. Two numbnuts guys is company
and I need someone to help split the rent.

So what is the big deal about Dayton? Is it the Nirvana of Ham Radio? Paradise Lost?
What one sees, for the most part, is a scurvy collection of goofily clad old men trailing homemade carts or modified grocery carts behind them as they drag "for sale" junk behind them.
Forget getting close to the new vendors booths. The Old Farts gather around the new vendors booths and dawdle for hours on end. No, they won't spend a penny, but they love to stand in front of the new vendors booths and share their flatulence with those standing behind them. The only way to get close to the new vendor booths is to hope that one of the Old Men wets his Relys and has to head to the bathroom.

Then there is always the Double Dip who comes to the fest with six handie-talkies on his aleady overburdended 1960's white belt. You have seen them. Six HT's, three on each side with mics dangling from every angle. It makes you wonder how the Goons keep their pants up.
And what Dayton Hamfest would not be complete without at least one Goofball running around the arena with a small beam antenna mounted on his hat? You have seen the likes. Beam me up, Scotty.

Oh, and let us not ignore the ever present Junk Vendors in the outside arena. Anybody want to buy a burned out Marine battery? Some ten year old AA batteries still in the orginal 1995 package?

Dayton is far from the Ham Radio Mecca it once used to be. It has turned into a Flea Market.

I went to Dayton once. After arriving at 0700 and not being allowed into the main arena until 11:00 I quickly wrote Dayton off, never to return.

It is not worth the trip.

Ahhhhhh....But Lennie, as YOU have been pointing out, THIS forum
is about AMATEUR RADIO...

And at least three of us have been challenging you to present some
sort of reference to something you've done RECENTLY for "radio"...

I'd call anything in the last 5 years "recent".

> >> Hmmmmmmmmmmmmmmmmmmmmmm....Good point. And when I think back on
> >> it, Lennie fought tooth-and-nail to get involved in a meaningful
> >> discussion on microwave technology.
>
> Tsk, tsk. Stebie has been told a MILLION times not to

What defamation, Lennie?

You're a liar. Been caught dozens of times.

You're not an Amateur Radio licensee. Siad you'd GET an Amateur
license, but never did.

Your SOLE purpose here is as combative-antagonist.

You're the RRAP version of Iraqui "insurgents"....Most are not
even Iraqui, and just come in form other places to get into a fight.

> Ah, but there is now Love and Harmony in the PCTA Extra Double
> Standard bearers. Jimmie now condones Stebie's actions.

What "actions"...?!?! Calling a liar a liar? What's wrong with
that?

> Be sure and spit on
> any U.S. military veterans who don't love and cherish morse
> code on Memorial Day.

I've restrained myself on a lot of my adjectives of choice,
Lennie, but that comment warrants the re-issuance of the title
"scumbag" upon your shouders.

You brazenly wordsmith yourself into familiarity with Soldiers who
died in combat before you were ever in the service, then claim victim
status as a "veteran" when it suits you for your own emotional

handwringing.

FYI, Lennie...Since your offering of a <middle finger salute> the other day I've started collecting caffinated drinks...I'll have a very special 'salute' for YOUR funeral...(Hint to Mrs Lennie...wear Scotchguarded footwear that day...)

It takes two hands to use a cellphone for text-messaging purposes.

In only takes two fingers to send Morse Code on a keyer.

The Morse guys were older, hence more experienced, yet the "text"
guys were younger and had greater reaction times and speed.

This really could have gone the other way had the Morse guys had
to "error" a letter and had to retransmit a letter.

I don't see a 'set up'...

I don't know where you are seeing that, I see Collins gear going for
prices higher than ever.

Dee,

I am basing my comments on what I see within the hobby.

When I went to Dayton, I was a member of a group of about 30 members who spent significant time and money to go and we did that for many years.

>From that group, now only less than five people go to Dayton and even those only go every couple years.

These are people who do hold licenses but use them less and less if at all. Many have since sold their stations.

Ham radio is in its twilight years and as the old guard dies off which is happening at an ever increasing rate, the slide into obscurity will accelerate.

As has been noted earlier, take a hard look at the demographics of the attendees of the Dayton Hamvention. It is obvious to the most casual observer that the age of the attendees is heavily weighted to the 50-60+ year range. Give them another ten years and the numbers decline further, it is doubtful that they will have the numbers to sustain the costs incurred to host the Hamvention.

I also think that manufacturers are preparing for this decline. The recent cancellation of the Drake R8B indicates that the hobby is not capable of supporting its equipment needs or the development of new product. The drop in the prices in collectibles such as the Collins line is another indicator that money is being spent elsewhere as interest wanes.

Your thoughts?

TMT

I dunno, I'd like to make it there one of these days. The event happens
to coincide with our busiest time of the year, so days off (Much less a
week!) are strongly discouraged. I'd love to make it to the Elecraft
booth.

At least my sig made it this year. I worked N8D on 7005 on the last
day. <hi>

Measuring how crowded the bands are? But that would require
measurements from years ago to mean much. Assuming that most
hams using their license spend about 2 to 3% time transmitting and
the rest listening (tuning around the bands looking for interesting
DX or rag chews) one could get a rough idea how many active
hams exist. Do one measurement on a contest weekend, and another
on a non contest weekend. From a QTH in the midwest. One would
have to figure how many hams are in propagation range at the
time of measurement.

How many Soviet aircraft did you see when you were in Japan in the
1950s, Len?

> He became a Virtual
> military expert without once being IN any branch or working in
> any office of the Department of Defense.

I don't claim to be an expert in anything.

You've never been "IN" amateur radio, yet you want to tell us How It
Should Be.

> Getting to the heart of the matter, Jimmie feels TERRIBLY "insulted"
> when one doesn't like what Jimmie likes.

Not true. You're the one who calls people names, and tells them to shut
up
if they don't agree with you.

> [he is regularly bringing up old, faded postings from Google as
> if to continue to "do battle" on those topics forever and ever]

Gee, Len, you bring up even older and more faded stuff about defunct
ham radio magazines and your experiences of a half-century ago. Why
is it OK for you to rehash events of 20, 30, 50 years ago, but not
OK for others to remind you of the events of 2 or 3 years past?

Seems like a double standard on your part.

> Jimmie wants NUMBERS? He is regularly giving some sort of
> tabulation
> on the "valid licenses" of radio amateurs in the USA.

No, I'm not. You're mistaken, Len. Wrong again.

The numbers I post here twice a month are those of current, unexpired
FCC amateur licenses held by individuals. That's stated in each post.
The word
valid is not used to describe them.

You've claimed that FCC doesn't use the word "expired" to describe
licenses in the grace period, but Part 97 shows that you're wrong on
that.

> However, he
> has not described the sorting program used or which download of the
> FCC database used as a base of that tabulation. [slightly over
> three quarters of a million records to process]

So? You've posted the numbers from hamdata.com without describing how
they are generated.

> We are to accept
> his NUMBERS as "correct" because Jimmie never makes mistakes. All
> others, ESPECIALLY those challenging him, always "make mistakes."

That's just not true, Len.
>
> Most folks would accept some website that regularly downloads the
> huge FCC amateur database, sorts it, and presents gross totals.

Then why don't you accept the numbers I post?

> Not Jimmie. He wants "massaged" NUMBERS, showing only the "valid"
> licensees..."valid" in HIS viewpoint.

Nope.

The numbers I post come from a website that regularly downloads the huge FCC amateur database, sorts it, and presents gross totals. All I do is copy them and post them here.

No "massaging".

> Jimmie needs MASSAGING
> of those NUMBERS in order to "show us" something...and thus we get
> the INTERPRETATIONS of those "valid" numbers.

How? The numbers are what they are.

> I especially like his "reason" for maintaining the code test for
> all amateurs having below-30-MHz operating privileges: "Morse
> code is the SECOND-most popular mode on HF, therefore the code
> test 'deserves' to remain!"

I'm glad you like it, Len. It's a really good, valid reason to keep a test of basic Morse Code skill for an amateur radio license.

It's a place to actually see just about every current radio all set up at the same time. It's a place to see a plethora of various styles of antennas set all at one time. I always come back with much new information to consider in improving my station and my mobile setup.

> What one sees, for the most part, is a scurvy collection of goofily clad

[don't forget uphill both ways... :-)]

> Things like that are for the most part just examples of how time has
>changed.

Ah, but some PEOPLE don't change that much, Mike! :-)

Everything has to be to THEIR WAY when they "made their mark"
as valiant Radio Pioneers of HF the "hard way," they thought
they were the only ones who "worked for it!" [all others got
it "free" or something, never ever actually working for
anything]

In 1945 a young "unknown" writer got an article published in
Wireless World magazine about a revolutionary new idea of using
three satellites in geosynchronous orbits to relay communications
around the globe. Of course, nobody had yet put any satellites
UP there, much less develop rockets that could place them there.
"Experts" in radio of that time generally thought it too "blue
sky" to be practical, a few saying it was "preposterous." About
1998 (give or take) there was a lot of argument about who could
be alloted the LAST of the equatorial orbits for communications
satellites...the spaces had been FILLED. 24/7 communications
satellites have been a common thing for over two decades now,
none of them bothered by the vagaries of the ionosphere.

The young writer had worked for the RAF during WW2 developing
GCA (Ground Controlled Approach) or "blind landing system."
He was a junior "boffin" or technical engineer, had never built
such a communications system before, never even worked on
rockets. He sort of dropped out of the electronics field and

became a novelist, concentrating on science-fiction. He's still living, in Sri Lanka, still writing, still active. His name is Arthur C. Clarke, author of dozens of best-selling novels.

If Clarke had such an "interest" in radio and communications, then he should have become a licensed radio amateur in the UK FIRST according to the Political Correctness of some in here. Can't have any of that speculative nonsense about the future! Everything "best" can only be done on HF bands and the "best" way to do that is by morse code! [that's why all the other radio services on HF still use morse code? :-)]

I guess it is VITAL and IMPORTANT that ALL amateurs KEEP all the anachronisms of the past alive, as A Living Museum of Radio, doing EXACTLY as the pioneers did it over a half century ago. NO deviations, everything according to Procedure, By the Book, Tradition held to the nth degree, Marching In Ranks to the Morse Drumbeat, etc., just as these other expert gurus of amateur radio did in Their youth.

All that for a HOBBY...?

bit, bit

I think you would enjoy it. Just seeing all the gear of the various brands and models of radios, antennas, etc all in one place at one time is worth it even if you buy nothing.

Then why are you constantly talking about other men's buttocks and genitalia.

I say you are. Prove me wrong.

> and no in no way am I a Lid!!!

Sure you are. You're broadcasting on 20 meters and too stupid to pick a frequency on 2 meters that is in accordance with the generally accepted band plan. (Please don't give me that silly business about "other states"...Illinois isn't one of them...)

Maybe. Trouble is, Len, you respond to everyone who disagrees with you
in the same way, whether they call you such names or not.

You and Steve have been insulting each other steadily for years now. It
would be interesting to go back in Google and see which of you started
that game. Of course, you won't do that.

You've told the story many times, Len.

> So, how many "projects" has Jimmie designed and built using
> PLLs? Or DDSs?

How many Soviet aircraft did you see when you were in Japan in the
1950s, Len?

How many amateur radio receivers, transmitters or transmitters have you
designed and built, Len?

How many of your articles for ham radio magazine were for construction
projects?

> How many "radios" has Jimmie designed/built at his work?
> Especially those NOT done from kits...?

How many have you designed and built at home with your own resources,
Len?

> >> Of couse ALL he has offered Amateur Radio are arguments, name

> Tsk, tsk, tsk! Jimmie gonna have a fit now, I did it differently.

Yes, your fits are very different...

> Was a supervisor of microwave radio relay terminals in 1954-1956
> while in the Army, terminals operating at 1.8 GHz.

There you go, rehashing the past again.

Did you design and build the microwave equipment, or just install and
maintain it?

Did you teach yourself how to do the job, or work your way through
school, or did you learn on the taxpayer's tab?

Did you pay for any of the equipment or other resources, or was it all
provided free for your use to do the job?

> Then I got a
> First Class Radiotelephone (Commercial) Operator License (only

And none of it was amateur radio.

> Not even in 1960 when
> I was working on Ka-Band microwave equipment (as well as UHF high
> power sources).

Not ham radio either.

> Class D CB was authorized in 1958 and that rather
> ended any need for a "ham license" to use a voice transceiver.

On a few channels, using low-power type-accepted equipment.

> Tsk. I've since transmitted from VLF on up to microwaves, in LF,
> MF, HF, VHF, UHF on land, in the air, on the water, all without
> having to pass any amateur radio license or pass any morse
> code test! ["Sunnuvagun!"] All very LEGAL.

None of it amateur radio. Almost all of it on someone else's station
license, with someone else paying the way.
>
> Well, Judge Sir James of the Noble Houses of CW decrees that I
> shall NOT ever set foot in here without expressing some personal
> desire of obtaining an amateur radio license!

Simply not true, Len. I've never told you nor anyone else here to shut
up. Nor have I ever said that a license is required to post here.

You, on the other hand, have told people here to shut up, go away, etc.

> Tsk, tsk, Tsk, TSK...all I'm trying to do is argue against the
> retention of the morse code test in federal regulations on U.S.
> amateur radio.

Then why all of your commentary on other, nonrelated subjects, Len? You
go on and on about things completely unrelated to the Morse Code test.

> Instead, I am called names (in Yiddish by non-
> Yiddish speakers), accused of Sedition and Treason Against The
> State,

Not by me!

> and told that my opinions are "simply not true!"

Some of your statements here are not based on fact. Like the claim that

FCC doesn't use the word "expired" to describe licenses in the grace
period.

Just like *you*, Len. I think you like it - you *want* others to behave the way you do.

I won't do that, which seems to really tick you off.

> Ah, but there is now Love and Harmony in the PCTA Extra Double
> Standard bearers. Jimmie now condones Stebie's actions.

Not all of them. Where do you get that idea?

> Judge Sir James, Night of the Noble Houses of CW, keep
> defending the NEED for the morse code test because it is the
> SECOND-most-popular mode on HF ham bands!

I will! It's a good, sound, valid reason for a test of basic skill. Not the only reason by any means, though.

> Be sure and spit on
> any U.S. military veterans who don't love and cherish morse
> code on Memorial Day.

I don't "spit on" any US military veterans, Len.

The subject matter, maybe. Replace questions about mercury-vapor
rectifiers with ones about silicon diodes, for example.

> One poster asked questions about push-pull amps and
> obscure modulation schemes. (except to a few AM'ers) While all this is
> very interesting - it isn't relevant to most of hamming today.

The point is that, in the opinion of a number of people, the old exams
- actually the old exam *methods* - required a different sort of
understanding of the material covered than today's exams.

> > One more difference about the old tests, though: Judging by the
> > study guides, the old tests focused on a few subject areas in depth,
> > while the new tests cover more subject areas but in much less detail.

Take the subject of, say, Ohm's Law for DC circuits. With the exam
methods used today, we know the exact form and content of each question
that could appear on the test. No surprises. If someone can get the
right answer to the Ohm's Law problems in the pool, they're all set,
regardless of their understanding.

But in the old test methods, we did not know the exact form of the
Ohm's Law questions. We only knew there would be some. So most
prospective hams learned how to solve all sorts of problems with Ohm's
Law.

If they want to memorize the pool, yes. I don't know how many people
want to do that.

> I would expect that I

Memorizing in this context doesn't mean being able to regenerate the
questions and answers verbatim. It just means remembering enough to
connect the right answer to the question, after having seen both
before.

> potatoes in their pockets for sustenance... ;^)

I recall a time when it was extremely rare to hear an intentional violation on the ham bands. Things like the "L1berty Net", W6NUT and 14.313 simply did not exist. There was nothing on the ham bands that wasn't "G rated". A very large part of the reason was that hams had a culture - a tradition - of keeping it that way. PArt of that tradition was that the license was valued as an achievement and an investment of time and effort.
>
> Things like that are for the most part just examples of how time has
> changed.
>
Here's another way to look at it:

Suppose you trained (like I did) to run a 26.22 mile marathon. And suppose you completed a couple of them, earning the right to describe yourself as a marathon runner.

Now suppose some people complained that the marathon distance was too long, and kept out too many. So they get the marathon distance changed to 5 miles, and call themselves marathon runners too.

How would that make you feel?

From your own dumbass words fool!

This priceless gem comes from alt.sci.physics.new-theories:

n9ogl
Aug 29 1999, 12:00 am

Hello

To start, I would like to excused for the poor typing of this text. I'm
not very good with grammar nor am I with spelling.

1. Objects and Time
In the small community of Taylorville; where I live there once was
a house known as Vanderveer House. It was once of course owned by the
Vanderveer family. in the 1980's the house was totally destroyed and a
Wal-Mart was put in it place. The question is this Is the Vanderveer
house still there after being destroyed back in the 1980's The Answer is
But it isn't in this "Time Frames". Basic physics dicatates "that no two
object can occupy the same space at the same point in time" however the
second part should go something like this "but, two object can occupy
the same space at different points in time" What most people see as
ghost or shadows from the past might be where the time frames are close
enough that they can see both way. Time is a mesurement, which we
measure by either clock or by "cause and effect" By cause and effect I'm
of course refering to events with history. for example many people can
remember events from their tenth birthday. So when you think of time or
a object like a building or a love one perhaps you should look at it
fourth dimensional.

So you must have worked at the Vanderveer House before you got fired
from Wall Mart . And don't call me dumbass, you stupid illiterate idiot

gay boy!

a number of collins gear models continue to bring in " staggering "
used prices .... this and the interest / prices keep rising on
ebay.

to see what I mean go to the " radio: CB, Ham, & Shortwave "
category and type in Collins and then look at the prices that the
640 " closed out " items have brought and be stunned !!!!!!!

used drake gear is right there behind collins too ....

some examples of recent collins sales :
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=48700&item=5776496330&rd=1
gasp........
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=4671&item=5776923356&rd=1
double gasp ....
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=4671&item=5776501846&rd=1
omg .....
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=4671&item=5775948196&rd=1
huh ???? ....
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=1502&item=5774578908&rd=1
numbing ....
http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&category=4674&item=5775229238&rd=1

and 100s more, recently .... simply shocking used prices
.... if this is a " drop " in prices I wouldn't want to see
the higher ones !!!!!!!!

k..............

I've seen Soviet aircraft without being overseas. I've seen them on
RADAR penetrating CONUS airspace.

So where were you when you saw Soviet aircraft? How did you serve?

> > He became a Virtual

Every issue of QST has excerpts from half a century ago. I've never,
ever, ever seen you complain. Ever.

Why
> is it OK for you to rehash events of 20, 30, 50 years ago, but not
> OK for others to remind you of the events of 2 or 3 years past?

Because you say it isn't OK for Len to remind you of events of 50 years
ago, but never comment when the ARRL does it.

> Seems like a double standard on your part.

Double-standard, indeed. That could be your middle name.

Well there ya go! These folk have run their course in Ham radio and are bored and dropping out. Happens in a lot of hobbies

> Ham radio is in its twilight years and as the old guard dies off which
> is happening at an ever increasing rate, the slide into obscurity will
> accelerate.

Any hobby dies out for the person that loses interest.

> costs incurred to host the Hamvention.

Making a demographic out of the people at Dayton? Just how many young kids are you expecting to see there?

I don't doubt that the Ham radio population is likely an older one. I also don't doubt that demographics for a lot of hobbies are shifting. It wasn't until my 40s that I started to get enough spare time to even think about a hobby. I tried Amateur astronomy, but the wx in central PA is kinda like Seattle, and I looked into amateur radio. BTW, if you think Ham radio is graying, Amateur astronomy would shock you.

The young ones will come into the hobby. We just have to wait for them to grow up.

> I also think that manufacturers are preparing for this decline. The
> recent cancellation of the Drake R8B indicates that the hobby is not

> capable of supporting its equipment needs or the development of new
> product.

Yeah, how many hams do you think ever had a Drake R8B? And of those who do, how many use it as part of their station?

The drop in the prices in collectibles such as the Collins
> line is another indicator that money is being spent elsewhere as
> interest wanes.

Personally I think any price drop in Collins equipment is on account of potential buyers regaining sanity. At Dayton this year, there were a lot of them. Some sold, a fair number didn't. Especially at the one tent where the people were trying to sell them for way over their worth.

Collins is old tube stuff. Fine radios no doubt, but hardly worth the price of a decent new rig.

So many came out this year at Dayton that potential buyers could pretty much call the shots. After all, you can ask for @ kilobucks for an old Collins, but is it worth that much if no one buys it for that much?

It looks like the bottom line is that back in
June 1997 there were 678,473 licensed hams
and in May of 1995 there were 664,972 licensed hams.
Thats a decrease of 2 percent over 8 years. Its a decline but not by much.

Does anyone have statistics that go back three or four decades??

In it's Evil Empire days in the eastern bloc it was their militaries
which very heavily encouraged and supported ham radio. They made no
bones about the fact that they viewed hams as a pool of reserve
military assets with critical skills. Hundreds if not thousands of
clubs were equipped with freebie military gear and near-mandatory
participation in contests was the norm since contesting is a
skill-builder. I remember listening to some of their "inhouse"
contests, SPs working UAs, etc. Those guys were *good*, almost 100%
hand-keyed 25-30 WPM CW hour after hour.

Maybe there's a grain of truth in your contention Dan, maybe some
countries still see some value in retaining some basic communications
skills in case push comes to shove . . . ?

Reminds me of an old giggler.

Guy tunes around looking for a hole on 20M, finds one and asks "Is this
frequency in use?"

A snarly 30 over nine signal pops up "Yes it's in use, I'm listening on
it."

Toad, you can't delete 3/4 of the message and turn it all your way.

You said "and there is no Vanderveer house, I don't know where you came
up with that"

I said that you said" where I live there once was
a house known as Vanderveer House. It was once of course owned by the
Vanderveer family.
I showed you where it came from jerkoff. Calling names doesn't make you
right, pecker breath!

Whatever the hell that has to do with Physics or cb, I have no idea!
Now to where you learned about Physics, could that have been in the
fixture room at Wall Marts? I'm surprised that an illiterate such as
your self can even spell Physics, I'll bet you say it with a lisp!
A ham license has nothing to do with Physics, If you ever get into a
real collage and take classes above 090 you'll find that Physics 100 is
about theories that can't be proven nor disproved and Physics 101 is
more about electronics theory.
BUT we weren't talking about Physics, we YOU said there was no
Vanderveer house and YOU asked where that came from and I showed you!
So lying gay stockboy, your turn!

maybe the value of the radio is in the beholder
or it's applications ....

for example , I have a satori / sherwood modded
, full boat, drake r-4c and a fully loaded FT1000 field ....sitting
side by side .. here in the shack and the so called " old tube
r4-c " blows the doors off my much newer
and more expensive FT1000mp v . the FT1000 receiver
is an embarrassment as compared to the drake on
weak DX in a VERY crowded CW band. no comparison
at all. people tell me that many of the collins receivers can be
tuned up to outperform even the drake r4-c receivers. maybe THAT is
why people pay more for a drake r4-c (I have $1200 to $1400
invested in mine , so far) or collins !! certainly the value is
in the weak signal / crowded band performance to me and
looks like it is to a LOT of other people too.

obviously , for your operating needs, solid state rigs do the job
.... but for those of us that need competition grade cw receivers
...... some tube receivers are still doing a better job. different
strokes for different folks. I've got the best of both worlds and ,
for me, tubes still do a better job in certain applications. (both
my amps < a alpha and a henry > have tubes too) .... I do
use my FT1000 for my transmitter / exciter tho .. ha ha ha ha ah.

k.................

It's a place to actually see just about every current radio all set up at
the same time. It's a place to see a plethora of various styles of antennas
set all at one time. I always come back with much new information to
consider in improving my station and my mobile setup.

Antiquities are only worth what people are willing to pay for them
including old tube junk. 10 to 15 years ago an old Chrysler Hot Rod from
the 60's or 70's wasn't worth much, now you can't touch one in very good
shape for less than 3 to 4 times the original selling price new. Go figure.

What would be of much more interest is the use to which the licenses are put. A history of how the various classes operated over time would provide a big clue as to what is happening to the service now. Hard numbers are better than the constant speculation I see here all the time. For example a decline in some types of operations could reflect a trend where the technology in use is either unpopular or being replaced by another one. For example AM by SSB. This would even answer the ever present question, and assertion, that Ham Radio is being supplemented by increased computer use and the Internet. Knowing that then the ARRL could spend it's time promoting those things that apparently Ham Radio still had the edge in capabilities. If you want increased license numbers then you have to know how to "market" Ham Radio, and if you don't know what the market wants, or you promote the wrong thing, then you end up with a declining market share, i.e. license numbers.

>From N9OGL BLOG
http://n9oglvoice.blogspot.com/

THE ARRL LIES!!!!!

I have figured out what amateur's think the way the do when it comes to information bulletins and what I am running. It is not the FCC that is telling them this shit, but the American Radio Relay League (ARRL) and here is what I'm talking about. The following is from the The FCC Rule Book : Complete Guide to the FCC Regulations Governing Amateur Radio published by the American Radio Relay League Edited by Norm Bliss WA1CCQ. The title is called One-Way Information Bulletins and it reads:

"The best known one-way bulletin comes from W1AW, for decades, W1AW has transmitted brief information bulletins. It is common practice for other amateur stations to conduct similar operations, usually on a localized basis, and as part of a scheduled net or on some other limited, scheduled basis. Such Bulletin are important to the dissemination of timely and accurate information to radio amateurs

W1AW and other stations providing this service generally have been careful to make such bulletins brief and factual. Occasionally, such as during the launch of an amateur radio satellite or space shuttle, some amateur stations using phone have been put into quasi-broadcast operation to provide real-time information about a developing situation of special interest to radio amateurs. Such events are rare and amateurs have exercised restraint [97.113(b)(e)]

According to rules, the content of bulletins must be limited to information on matter of direct interest to radio amateurs only, and never intended for the ears of the general public [97.3(a)(24)]. As with business communications, the potential for abuse of one-way transmissions rule has long existed. There is no room in the crowded amateur high-frequency bands for lengthy one-way transmissions on a regular, quasi-broadcast basis. Information bulletins by definition must be confined to factual matter, not a matter opinion. They must be intended to inform, rather than to entertain. [97.111(b)(6)]" (ARRL The FCC Rulebook, 1995, page 4-4)

This information which the ARRL is publishing is not true for the simple reason that he FCC in a warning letter to K1MAN in 2004 stated that his programs were in compliance with the FCC rules concerning the content of his programs. They also stated that there was "No specific time limits placed upon information bulletins by the commission rules." [Warning Letter to K1MAN, April 14 2004, Page 2 Section 4] The FCC has even stated on their website that "The control operator of the station

transmitting an information bulletin is responsible for determining
that the subject matter is of direct interest to the amateur service."
So who are going to believe the ARRL who is pushing content control and
supress free speech of the FCC???

>BUT we weren't talking about Physics, we YOU said there was no
>Vanderveer house and YOU asked where that came from and I showed you!
>So lying gay stockboy, your turn!

first off everytime you use a radio,your using a part of physics, so
ham radio does have something to do with physics, even the term SWR or
Standing Wave Ratio is a physics term. As for what it has to do with
physics I was explaining a concept that a little lid like yourself
could not even begin to understand. But let me try to explain it,
although this is not the proper forum to do so.

At one time in taylorville there was a house called Vanderveer house.
In the early 80's they torn it down and built a wal-mart (long before
my time working at wal-mart, I was still in jurior high) Now the
question that needs to be asked is the house (vanderveer house) really
gone? and the answer is no, the reason is that the house is still there
in it pride and joy, but in a different frame of time. Einstein also
wrote about time frames in his theory of realtivity but, I have
expanded even farther in that field to surpass Einstein. My theories
are based on "time frames" and "subspace" the example of the house was
that an example, my main theories in that field has to do with
particles and subatomic particles.
but hey, I know a little CB operator couldn't understand these high
tech theories.

Todd said
"I know a little CB operator couldn't understand these high
tech theories."

Todd. Oh, poor Todd. Stop fooling yourself, will you? You are for sure not fooling anybody in these newsgroups, so why do you persist?

Life is a challenge for everybody, Todd. For some more than others.

How many times does the comment have to be made that your life challenge has left you in the dust of eternal bewilderment? Or words to that effect. (I hesitate to call you stupid)

Todd. You could begin by using a spell check program. There are many such programs available and many are free for the downloading. You could, but apparently don't, use a word program to author your responses before posting them. Of course you are either too lazy or not 'high tech' enough to do so.

Hint: Use a word program and let it do the spell check. Then, if you are 'high tech' enough you can copy and paste your 'high tech' comments to the Newsgroups. Unfortunately the free word programs will not filter your asinine use of profanity.

And Todd, despite the comments that seem to question you gender of preference, I will ignore them for the time being. Just answer me this, Todd.

Do you prefer to be addressed as Mister Todd or Ms. Todd?

Well that's straight forward enough at first glance. The sticking point is many don't want a Ham ticket for any reason, they don't even know what it is. The ones you need to ask are those who find they get what they want using other means, computer - Internet, AFTER considering Ham Radio. The ideal place to find that information are the classes the ARRL is pushing under their educational program.

This is an important point because the kids can then make an "informed" choice based facts and first hand experience instead of something they read in a magazine or seen on TV / movies. Also just how many of those kids that do get licensed stick with the hobby? For those that don't these are the ones that have the answers as to why, for example the cell phone - instant messaging fits their needs and interest better. I don't know if the ARRL even bothers to try and collect this kind of data.

>I'd almost bet they are telling the truth...

Why wouldn't they?

> Yanno, you can do a lot of things to try to fix something--but when you

If you're going to try random chance at least try to narrow down the number of options, improve the odds of success, a bit. That's only going to happen if the ARRL gets systematic about collecting some useful and meaningful data, otherwise known as market research.

Normally I just sandbag on the side in this news group reading the posts. Most of the arguments over licensing numbers are petty much useless since most don't have any hard statistical data to support their points. I have to admit some of the arguments I've read are very well constructed and logical, but without the hard data it's just all speculation.

The dilemma, if you want to describe it as that, of declining Ham licensees is little to worry about. It appears that some few hand-wringers are making much ado about nothing.

I have noted that, over the years, the majority of new Hams are not joining the ARRL. And for good reason, too.

The ARRL is a dinosaur, replete with septegenarians who are interested in doing things the 'old way'. Many new Hams look at the yearly fee to be a member and simply toss the application in the waste basket. I did this very thing some 25 years ago and never looked back.
After all, who really needs the ARRL? What do you get for your membership? A monthly magazine? Big deal.

I will leave the speculation and 'hard data' gathering processes to others who show an interest in data processing. Their efforts will be of little value in the long term scheme, other than they gathered some numbers and percentages that have little, if any, value in the long run.

Meanwhile, catch me on the HF bands. I'll leave the overcrowded two meter repeaters to the handi-talkie newbies.

All the more reason to upgrade.

Chief Stenger is still watching you, Woger. You and I both know that the local PD has their eyes on you.
It has not escaped the Chief's attention that you live only a couple of blocks from the local grade school.

The only reason you have not messed with the kids, like you did in Florida, is that you know the local police officers are watching you very closely.

And you don't want to be put back into a mental facility again, do you? You know how much you hated it the last time.

In VK, we continue to see a steady decline, both in absolute numbers and in
membership of our national radio body (Wireless institute of Australia)
despite the removal of CW as an comulsory entry requirement onto HF.
However, we are about to see a new licence system introduced similar to the
UK system (which I believe resulted in an increase in numbers there). Age
demographics are pretty much on the "old side" - but there continues tobe a
trickle of young amateurs coming on line - how it will go in the end, not
sure.
On a side note, the use of HF appears to have increased, but not
dramatically and it would be difficult to prove conclusively that this is
the case (based mainly on callback numbers to the weekly WIA broadcasts).

Steve,

Where does Lennie come up with all this tripe? I read most of what is going on here with the knife fighting. But I certainly don't see where those that enjoy CW and HF are "stuck in the mud" so to speak.

This is a sincere question. I guess I just don't understand his mindset.

I think I have figured Lennie out Steve....after this disgusting parody of Memorial Day.

I think he was a victim of a "barracks party" in his youth. Perhaps the application of lye soap, and the rough wool green blanket to tender parts of his anatomy have caused permanent brain damage.

Dan/W4NTI

..

Dan. Len is what we used to refer to as a "chairborne" warrior.
He learned all the nomenclature, read all the books, but he didn't leave his chair.

Len may know what an old C-47 (DC-30) looks like but I bet a month wages that he never exited the aircraft the way I used to.
Len, ex military self-proclaimed professional that you are, veteran of all things military, how many jumps do you have in your resume'? Leave Steve out of this...stop questioning him for a minute.

Len commented to Steve that he had "stick time" or something to that effect.
Len, in my military book the term "stick" denoted the number of Troopers getting ready to go out the door. As in a "stick" of fifteen or twenty paratroopers.

By the way, Dan. Giving Len a "barracks party" would these days result in Len crying to the CO that he was set upon by his fellows and he'd go crying to the nearest politician.

Hats off to you, Dan. Thank you for your service.

Airborne!!!

Arf! Arf! (former Screaming Eagle, Ft. Campbell, Ky.)

1672. Before Len nit picks...

Len, lest you nit pick about the location of Fort Campbell, let me explain. Yes, I was for sure at Ft. Campbell in Kentucky. The base saddles the state line between Kentucky and Tennessee.

I would wake up in Kentucky and go across the street to the PX in Tennessee. You see, Len, the stae border ran right down the dividing line of the base. I would do PT in Kentucky and and have a cold one at the end of the day in Tennessee.

Of course you chairborne types would not know this.

And Len, you have not answered my question. What was your MOS and what did you do in the service of our country?

It seems that you and bb have a fair share of hot air with little to substantiate your claims.

Stand up. Hook up. Stand in the door.

Airborne!

Does your resume state your number of jumps? Hi!

> Len commented to Steve that he had "stick time" or something to that effect.

Actually, Steve commented to the world that Steve had illegal stick
time.

> Len, in my military book the term "stick" denoted the number of Troopers
> getting ready to go out the door. As in a "stick" of fifteen or twenty
> paratroopers.

Steve was referring to the controls, as in flying the aircraft. The
only times he jumped out of the craft was when it was on the ground.

But he probably hollered out an "Oohah!" each time.

> By the way, Dan. Giving Len a "barracks party" would these days result in

Need a lot bigger sample size though. The younger people that I know find
the code the most fascinating part. The resistance comes from people taking
up ham radio who are middle aged. However neither your sample nor mine is
large enough to draw conclusions.

Keep in mind that any change in rules may take years to have a noticeable impact on the number of licensees. How long has VK been codeless? Has it been long enough to have the hoped for impact? If you change licensing systems, the same questions need considered before judging it.

Here in the states, it seems that the last couple of changes in licensing requirements has had no noticeable long term effect.

People have tried and tried to tell him that opinion, facts, news, and information are four different things but he persists in confusing the four items. No one would have any problem with his transimitting facts, news or information but he persists in insisting that opinion falls under the category of information. The only "opinions" that would fit the information definition are those rendered by the judicial system or a governing body as they are clarifications of the rules. Based on the one or two titles of this broadcasts that he has listed here, his do not qualify as information.

That warning letter was the opinon of the person writing it, and
NOT "official policy". THE ONLY "RULES" THE FCC CAN ENFORCE ARE THOSE
IN WRITING AS PUBLSIHED IN PART 97 EXCEPT UNDER VERY STRICT AND LIMITED
INSTANCES.

K1MAN's operations were found to be generally in compliance, but
he ahs also be warned, re-warned, and warned again about pusing those
limits.

You're probably right, Dan...My take on his "brain lock" in the
50's has to do with his drunken return to the hooch one night, passing
out face down in a benjo ditch somewhere...All that methane messed the
kid up...

I'd can't say I am surprised to see Lennie using the Tomb of the Unknowns as the backdrop for some purile "story". However after his several passes at familiarity with men who died before he was inducted, I guess it shouldn't have been a big surprise.

He's the kind of "veteran" that perpetuate some of the stereotypes that other Veterans have to overcome.

I followed one of Lennie's links once and came up on the website of "his" old signal batallion. I ought to take some of his quotes from here and drop them there and see how his old buddies take to his use of their comrades sacrifices being used like that.

Ought to make him reeeeeeeeeeeeeeeeeeeeeeeeeeal popular at the next reunion...if he dares to go.

"Why not just do what I did, ask the younger people why they are not interested in getting a ham ticket..."

I think the ARRL and the licensed hams need to consider that question too. Most young people don't see ham radio as an up-to-date way of communication. Rather they see the licensing and equipment required as an anachronism. They have numerous highly portable license-free ways of communicating with one another and getting information about the world. Why go through the hassle of getting a license and radio equipment only to find out that the people you work and play with are not on the bands. They don't know what see you on 2 meters means - and when it is explained most of them say but I can do that on a cell phone with lots of people right now.

> And Len, you have not answered my question. What was your MOS and what did
> you do in the service of our country?

Allow me to help, Arf.

Lennie has regaled us with his tales of Radioland Warheroness over
and over...

Lennie held >>MAINTENANCE<< MOS's for "microwave relay" systems in
the 1950's. He has tried to use that to impress us with how he
allegedly "operated HF radio without Morse Code" back in the day...The
problem is he NEVER held any operator MOS.

No doubt he keyed up the rig to help set SWR or pre-set channels
on ocssassion, but Lennie was no closer to being a "radio operator"
than "Barney" is to being a Tyrannasaurus Rex.

You missed his "1.2 million messages passed" song and dance. He
tried to pass off as his own accomplishment some phenominal numbers of
traffic passed...

Needless to say just about everyone landed on his head over the
numbers...THEN the story changed to "Well...I was part of a TEAM that
did it...".

Yeah...uh huh...right...

I can see HQMC peeing down their legs in hillarity if I tried to
get my record to reflect how I was "part of the team" of "my" old unit
in Viet Nam...Oh..Wait...I was still in High School when they did
that...Oh well..I'll tell 'em Lennie said it's OK!

His other NG faux pas, first "aired" about 4 years ago and repeated here within the last week, has been his use of the sacrifices of the lives of Soldiers who were KIA's to make him appear as though he was somehow involved in their greater glory. That in and of itself is about as disgusting and disgraceful as one (alleged) veteran can be towards another.

You may have seen Jim Miccolis ream Lennie on the "Russian Bear" threat and his 'sphinchter' post.

In one episode of buffoonery and grandstanding, Lennie went on to tell us how he "lived under the threat of the Russian (Tu-95) Bear" while he was in Japan. Well, any reasonably well informed aviation historian knows that the bear entered service well AFTER Lennie had rotated back to CONUS.

And his "sphinchter" post was a scathing damnation of another poster who "didn't know what it was like to be under "incomming" artillery fire", as if HE knew what it was like...Ask Jim to provide you the link...It's yet another damning example of how this wonderputz feels perfectly at liberty to TAKE liberties with military service.

And of course he can't help but ridicule anyone who "volunteers" for ANYthing, and especially Civil Air Patrol and other military programs...Oh, Lennie is ALL ABOUT dragging out his former military service number like it was five white stars on a field of blue when it suits him...

Of course he can't even get THOSE insults correct. You should have seen his attempts to "call me" on CAP's inventory...airframes CAP hasn't flown in 20 years!

And Lennie's scathing damnation of the "civilian defense" services of WW2...Of course Lennie was a pre-pubescent adolescent in the midwest during the war...But hey, let's not let details get in the way...

Lennie enlisted without waiting to be drafted. Good for him. He managed to get out with a GCM. Bravo. No one can take that much away from him...But his lies, deceit and liberties with other people's sacrifices SINCE then make him a real piece of work.....

> It seems that you and bb have a fair share of hot air with little to
> substantiate your claims.

At least Brian Burke (I have to give him this due where it's due...) did some forward-deployed time in Somalia. He and I both know what incomming fire sounds like...!

Lennie's "incomming fire" was an M-80 rolled down the squadbay on July 4th!

> Stand up. Hook up. Stand in the door.
>
> Airborne!

OOOHRAH!

Thanks, Trooper!

How does someone have a "show" on an amateur radio frequency?

I encountered one individual in the past who had a number of "great theories". He wrote them on the outside of 9 x 12 manila envelopes in crayon and magic marker and mailed them to U.S. embassies.

Take a physic, Todd.

Here, I'll sum it up for you:

"No matter what employment, education, experience or
government/military service a person has, if that person opposes Mr.
Anderson's views, he/she will be the target of Mr. Anderson's insults,
ridicule, name-calling, factual errors, ethnic/gender/racial slurs,
excessive emoticons and general infantile behavior."
>
> Stand up. Hook up. Stand in the door.

Gotta take some serious cajones to jump out of an aircraft that
is flying perfectly well. Double or triple that to do it in order to
engage hostile folks on the ground.

Here's a big "thank you" to you and all who have served our country,
Arf. Both in uniform and in other ways.

>Len, lest you nit pick about the location of Fort Campbell, let me explain.
>Yes, I was for sure at Ft. Campbell in Kentucky. The base saddles the state
>line between Kentucky and Tennessee.

Does anyone care where an anony-mouse "saddles?" :-)

Anony-mousies have horsies? :-)

>I would wake up in Kentucky and go across the street to the PX in Tennessee.
>You see, Len, the stae border ran right down the dividing line of the base.
>I would do PT in Kentucky and and have a cold one at the end of the day in
>Tennessee.

Sounds like you had way too many "cold ones" in straddling the
"stae" line. Sober up and try again.

What has that to do with AMATEUR RADIO? You MUST follow your
Commander's (Gen. Chesty "stick time" Robeson, USMC) Order of
the Day: The only "airborne" talk is USMC helicopters. The
only amateur radio talk allowed by him is USMC MARS ops on
Okinawa.

>Of course you chairborne types would not know this.
>
>And Len, you have not answered my question. What was your MOS and what did
>you do in the service of our country?

Am I supposed to pop-to and immediately "answer a question" of
some anony-mouse? :-)

My primary MOS was 281.6, microwave radio relay operation and
maintenance supervisor, secondary MOSs as Fixed Station radio
operation and maintenance supervisor, carrier terminal
operation and maintenance, United States Army. A buddy in my
outfit, serving at the same station but on a different
operating team (we had four teams) is Gene Rosenbaum, N2JTV.

You can see the details of where and how I served at:

http://kauko.hallikainen.org/history/equipment

There are three documents there (second group on that web
page). The first one, "My Three Years with ADA", describes
it in more detail.

As to working as a civilian on DoD contracts, there's not much available to show you, especially not to anony-mousies. Pick Hughes Aircraft Co. Ground Systems, RCA Corporation, Teledyne Electronics, and some others on up to 1989...just tell them you are "Arf" the man you say you are and demand they TELL you what I did in electronics engineer as a civilian. I'm sure they will salute you smartly. With the middle finger.

>It seems that you and bb have a fair share of hot air with little to
>substantiate your claims.

I've got all sorts of documents, some already scanned to back up MY claims "Arf-ass," and the United States government to reference it all. Just go to the big Military Records center (NARA) at St. Louis, MO, and demand to see my Army record. They have a website and can even return information over the Internet. Here, I'll even give you my ASN: RA 16 408 336. Trouble is, YOU have to supply YOUR SSN on the Standard Form for getting those details. The U.S. government doesn't accept demands from anony-mousies. Expect another middle-finger salute from them when you can't supply that. You deserve such.

>Stand up. Hook up. Stand in the door.

Tsk. You've seen too many military movies on TV.

Next time, do NOT forget the parachute as you just did...

>How would that make you feel?

Awwwwwwww...ain't that a darn shame?!?

Outside of starting with the letter M, I don't see ANY
comparison of marathon running to morse code.

The FCC doesn't require ANY athletic skill/talent/expertise
to get ANY radio operator license.

Sunnuvagun! [TM Hans Brakob, more or less]

Suppose you were an original radio amateur like thousands that
came before you, training and working real hard to learn and
be expert in SPARK transmitter technology...then the nasty
federal authorities BANNED SPARK forever! And those darn feds
had the NERVE to allow newcomers into ham radio without ANY
knowledge or experience of SPARK! SPARK was the BEGINNING
for hundreds of early radio amateurs in the USA! BASIC!

FAX me your TS card, I'll punch it...you poor baby...

Now, now, you are being toooo modest... :-)

>You've never been "IN" amateur radio, yet you want to tell us How It
>Should Be.

That's simply untrue. :-)

But...one just cannot tell a PCTA Extra anything. :-)

>> Getting to the heart of the matter, Jimmie feels TERRIBLY "insulted"
>> when one doesn't like what Jimmie likes.
>
>Not true. You're the one who calls people names, and tells them to shut up
>if they don't agree with you.

Tsk, tsk. Someone like that should be removed from this
newsgroup "clubhouse," shouldn't they? :-)

You can begin by removing some 1x2 Extras in here, such
as the one always calling his "opponents" for "Putz."

>> [he is regularly bringing up old, faded postings from Google as
>> if to continue to "do battle" on those topics forever and ever]
>
>Gee, Len, you bring up even older and more faded stuff about defunct
>ham radio magazines and your experiences of a half-century ago.

Tsk, tsk, tsk, perhaps because I actually DID those things
and you did not? Awwww....

>Why is it OK for you to rehash events of 20, 30, 50 years ago, but not
>OK for others to remind you of the events of 2 or 3 years past?

Who said "it isn't OK?" Jimmie, you do that all the time
lapsing back to your teenage years and that MIGHTY TEST
for an AMATEUR radio license!

>Seems like a double standard on your part.

Awwwww...you seeing double all the time, Jimmie? Yes you
are. Get some medical attention. See Dr. Robeson, both of
him, maybe some of his other alter egos...he has the
"qualifications" to do things. He says.

>> Jimmie wants NUMBERS? He is regularly giving some sort of
>> tabulation on the "valid licenses" of radio amateurs in the USA.
>
>No, I'm not. You're mistaken, Len. Wrong again.

They aren't tabulations?!? Are you MAKING THOSE UP?!?!?

>The numbers I post here twice a month are those of current, unexpired
>FCC amateur licenses held by individuals. That's stated in each post.
>The word valid is not used to describe them.

So...where do those NUMBERS come from?

>You've claimed that FCC doesn't use the word "expired" to describe
>licenses in the grace period, but Part 97 shows that you're wrong on
>that.

Tsk, tsk, tsk. There's a GRACE PERIOD, Jimmie. That's in
the regulations. Do you mean each "expired" licensee has to
RETEST? Say goodnight "gracie?" Grazie...

>So? You've posted the numbers from hamdata.com without describing how
>they are generated.

That's simply untrue, Jimmie.

>> We are to accept
>> his NUMBERS as "correct" because Jimmie never makes mistakes. All
>> others, ESPECIALLY those challenging him, always "make mistakes."
>
>That's just not true, Len.

So...you DO make mistakes?!? Who would have thought that....?

>> Most folks would accept some website that regularly downloads the
>> huge FCC amateur database, sorts it, and presents gross totals.
>
>Then why don't you accept the numbers I post?

Tsk. You don't accept www.hamdata.com numbers.

>> Not Jimmie. He wants "massaged" NUMBERS, showing only the "valid"
>> licensees..."valid" in HIS viewpoint.
>
>Nope.

>
>The numbers I post come from a website that regularly downloads the

WHICH website, Jimmie? How can we trust your "honesty"
in anything when you make so many mistakes?

>No "massaging".

Your medium is the massage.

>> Jimmie needs MASSAGING
>> of those NUMBERS in order to "show us" something...and thus we get
>> the INTERPRETATIONS of those "valid" numbers.
>
>How? The numbers are what they are.

Tsk, tsk, it's the editorial commentary that you add... :-)

>> I especially like his "reason" for maintaining the code test for
>> all amateurs having below-30-MHz operating privileges: "Morse
>> code is the SECOND-most popular mode on HF, therefore the code
>> test 'deserves' to remain!"
>
>I'm glad you like it, Len.

That's simply untrue, Jimmie.

> It's a really good, valid reason to keep a
>test of basic Morse Code skill for an amateur radio license.

It's your bullshit OPINION, Jimmie. NOT a "fact."

It's not an international requirement. It's not something that
the FCC thinks is necessary for amateur license grants. They
keep it in the rules because the PCTA lobbyists from ARRL and
other olde-tymers insist/demand it is "necessary" (because they
HAD to pass it), and because amateur radio isn't that important
to address rules changes right now.

Enjoy the ARS (Archaic Radiotelegraphy Society) in all its
beepery. Keep on recreating the pioneer days in radio that
you were never a part of, poor guy. Hold those ancient
traditions, standards, and practices forever...make sure
nothing is changed and keep on saying to hell with newcomers,
make them work like Jimmie did as a teenager. After all,
wasn't amateur radio created in YOUR image? :-)

Brian, careful, you know how painful it is to remind Jimmie
of the obvious. Pastor Jimmie might write another Sermon on
the Antenna Mount!

>>Why
>>is it OK for you to rehash events of 20, 30, 50 years ago, but not
>>OK for others to remind you of the events of 2 or 3 years past?
>
>Because you say it isn't OK for Len to remind you of events of 50 years
>ago, but never comment when the ARRL does it.

Jimmie wants to rehash what I was "supposed to do" in Japan,
but Jimmie has NEVER served in any military anywhere anytime.
That's "okay."

Jimmie wants Total Agreement with his OPINIONS. If there is
no Total Agreement, then dissention is "wrong," must be
BANNED, shouted down, tarred and feathered, etc., etc.

>> Seems like a double standard on your part.
>
>Double-standard, indeed. That could be your middle name.

I think it should be just "H" (for hypocrite).

>> > Jimmie wants NUMBERS? He is regularly giving some sort of
>> > tabulation

Poor baby...can't you see that the "Tomb of the Unknown SOLDER"
is a parody on your own self-promotional ego? :-)

SOLDER is a blend of lead and tin. Your tinny little diatribes
on my patriotism and unit honors is just base-less. You need
to get the lead out and learn to associate with different people
(other than the imaginary goblins that live in your head).

Feel free to access http://www.78sigbn.army.mil

The Signal Battalion I was assigned to, FEC Sig Svc Bn, 8235th Army
Unit, was originally formed on Honshu in late 1945 as the 71st
Signal Service Battalion. Shortly thereafter, the 72nd Sig Svc Bn
was formed at Camp Zama near Yokohama. The "71st" name was
changed to "FEC" (for Far East Command) in 1953, but retained the
numerical designation of 8235th AU. In 1956 the two battalions
were merged to form the Japan Signal Service Battalion, head-
quartered at Camp Zama. That was part of the U.S. Army down-
sizing that took place after the Korean War entered its "permanent"
Truce state in 1953.

Further downsizing took place in 1963 when the entire communications
station in central Honshu was transferred from USA to USAF. That
consolidated the Camp Owada receiver site to entirely USAF instead
of being a joint command of USA/USAF. The Camp Tomlinson trans-
mitter site was untouched, only personnel of USAF exchanged for
former USA. The torn-tape TTY Relay facility at Camp Drake
(modernized and in a new building by 1962) was transferred to USAF.
The combined battalions at Camp Zama were further downsized in
1964, and organizationally reported to a Signal Brigade at the
USARPAC (United States Army Pacific) in Fort Shafter, HI, the
new location of what had been Far East Command Hq originally
located in Tokyo.

In 1992 there was further reorganization in USARPAC, with the
516th Signal Brigade directly reporting to USARPAC with four
Signal Battalions reporting to the 516th: 78th Signal Battalion
in Camp Zama (which had originally been the two battalions
mentioned above), 59th Signal Battalion in Alaska, 58th Signal
Battalion at Fort Buckner, Okinawa, 30th Signal Battalion at
Fort Shafter. A principle duty of the 516th Bde is to operate
and maintain, among several things, the military's DSN or
Digital Switched Network, very similar to the civilian Internet
but having limited access and much greater encryption
capability. A subsidiary responsibility is operating and
maintaining HF radio facilities as a back-up to existing DSN,
Satellite, and Troposcatter communications. The old station
callsign of ADA was transferred to Hq, USARPAC, in Hawaii, and
remains today; the old radio facilities transferred to USAF
were closed, disbanded in 1978.

There is NO "website" of the 8235th AU. There is only the present-day USARPAC organization and the 78th Sig Bn at Camp Zama, the much-reduced size of Hardy Barracks in Tokyo, that is left of the FEC Hq, Central (Honshu) Command USA, and the ADA communications facilities in Honshu of the 1950s. Military units and locations tend to change and shift with time and differing missions. There is NO "reunion" that takes place. I have located 9 individuals who were at the ADA comm facilities prior to 1964, 1 civilian, 7 Army, 2 USAF, and we have corresponded by surface and e-mail. The Pacific edition of the Stars and Stripes military newspaper interviewed me for an article published on 10 Nov 02, used six of my photographs; that is available for viewing at the 'estripes' archives for that date. Tokyo offices of the Stars and Stripes is still located in Hardy Barracks (named in honor of Cpl Elmer Hardy, a member of the old 71st Bn, killed in the crash of a transport in Korea along with 18 other battalion personnel) on 1 Jul 50.

This Memorial Day I will honor ALL veterans who ARE veterans with special affinity for those who served in the same unit I was privileged to serve. If you wish to continue saying that is some kind of "defamation," that is your right of free speech. You are free to contact the Historian of the 78th Signal Battalion, the United States Army, the Adjutant General of the United States, the Department of Homeland Security or your fabled "authorities" which can "respond to your telephone message to have me 'picked up'". However, such "defamation" is your own inability to coexist with others and will be seen by all parties concerned. It will be YOUR humiliation to "level charges," not mine. The United States government has my service record, all my security records and interviews, all archived at several places besides NARA in St. Louis, MO. There is NOTHING in my records, not in the states of Illinois or California, not in any local governments that are any sort of "disgrace" to me or my relatives. You will NOT succeed in any such "defamation" charges, but will be seen as just another egotistic little sociopath living in imaginary glory on the Internet.

Dismissed.

Okay. Now comes the question of how to reconcile the in-depth
questioning of the old tests with the large amount of new material that
would be needed to accommodate what has transpired since the good old days.

About the only way I can think of to accomplish this would be to add a
LOT of questions to the test.

Right. I think that most people that want to learn above the Technician
level *want* to know the material.

And frankly, there were enough bad eggs let in under the old system,
that I think that those who tout the superior Hams produced by the old
system might want to consider the subject before yapping about folks
like me.

Well, of course there are many different distances that can be run.

But your point as I see it is that things have been made so much easier that people such as myself can just step in easily, following in the footsteps of people who had to really *earn* their licenses.

Those who came before are therefore justified in resenting the newcomers because we didn't have to prove ourselves (take the harder test)

That there are people out there that feel that way is of no doubt. Personally, I think they are a much greater threat to the health of the ARS than us nickel types. I've watched them belittle the new guys to their face. Thats no way to encourage folks.

Perhaps not so obviously. I've been getting into Hollow state
technology recently. Bought a couple olde tube Heathkits and their power
supplies at Dayton, and will restore them. I came into Ham radio (radio
at all) too late for tube stuff, and frankly, the tube rigs seem very
cool to me.

> .... but for those of us that need competition grade cw receivers

It would seem that you should sell that FT1000 and go strictly tubes if all you do is use it for transmitting. 8^)

I don't find the internet or cell phones to be any competition to
Amateur radio at all. The internet requires the ability to click a
mouse. Cell phones are for yacking on. Neither are technical hobbies.

Cell phones as a hobby? Sounds odd! 8^)

> is a parody on your own self-promotional ego?

In my world, there are certain things that are perfectly fine to
"parody" and things that aren't...The Tomb of the Unknowns is one of
those that isn't.

> The Signal Battalion I was assigned to...(SNIP)

YaddaYaddaYadda....

I guess you haven't gotten the message yet that we (yes, WE...)
don't care.

> Further downsizing took place in 1963...(SNIP)

And we STILL don't care...

> This Memorial Day I will honor ALL veterans who ARE veterans
> with special affinity for those who served in the same unit
> I was privileged to serve. If you wish to continue saying
> that is some kind of "defamation," that is your right of free
> speech.

I never same you defamed them.

I said you DISHONOR them with your snivvelling efforts to try and
make yourself look better with THEIR sacrifices.

> There is NOTHING in my records, not in the states of Illinois
> or California, not in any local governments that are any sort
> of "disgrace" to me or my relatives.

And once again you continue to ignore the fact that I NEVER said that there was anything in any "record" about what you did in the service.

It's how you have tried to use the sacrifices of others to YOUR benefit in this forum.

> Dismissed.

Not by a lowlife little creep like you.

You're a disgrace to all veterans. I suggest you stay away from any and all military cemetaries, now and in the future...

Putz.

Every student going though the electronics and engineering courses at the college here knows very well what a ham ticket is (the instructor is a ham), and darn well pass any of the exams blindfolded... seldom do they see the need or have the desire when they have tuned the bands and listened...

You think most other colleges are different?

Warmest regards,
John

I don't find the internet or cell phones to be any competition to
Amateur radio at all. The internet requires the ability to click a
mouse. Cell phones are for yacking on. Neither are technical hobbies.

Cell phones as a hobby? Sounds odd! 8^)

I have a single russian tube (two tube in push-pull driving it--in the amp) which is outputting approx. 4.5KW... can you imagine what the transistor (mosfet) amp which could match it would look like--or cost!!!!

Warmest regards,

Perhaps not so obviously. I've been getting into Hollow state technology recently. Bought a couple olde tube Heathkits and their power

supplies at Dayton, and will restore them. I came into Ham radio (radio at all) too late for tube stuff, and frankly, the tube rigs seem very cool to me.

It would seem that you should sell that FT1000 and go strictly tubes if all you do is use it for transmitting. 8^)

1717. Why not more young'uns in Ham radio

Newsgroup: rec.radio.amateur.policy
Date: 2005-05-28 23:42:14 UTC
From: Mike Coslo <mremovethiscoslo@adelphia.net>
Message-ID: <muadnSdIoqFJnATfRVn-gg@adelphia.com>
Source record: 108949

Many people lament that there is not enough interest in Ham radio by young people.

There are often many reasons given for this deficiency, and somewhat less "fixes".

One of the reasons that is given very often is that Amateur radio is in some sort of competition with the Internet. Let us look at this theory.

What is the competition between the two? In order to use the internet, one must of course have a computer. It must be connected to the internet, through one of several methods. Once the person has learned to turn on the computer, open a few programs or so, they have the necessary skills to work the internet.

Amateur radio on the other hand, requires that a radio be used, which requires some skill in operating. An antenna system needs to be connected to this radio. Whereas it is possible to have everything set up for the Ham, most young people do not have the resources to have someone set up their system. Coupled with the possibility of putting an antenna in operation that only costs a few dollars, or even less if the youngster has good scrounging skills, the likelihood is that they would design and put up their own antenna, another skill needed.

So there is a large difference in the skills needed for the two hobbies.

Cell phones as competition? While there is a temptation to snipe "Get Real!", I'll address those too.

What would make a person decide to take up Cell phone use as a hobby? Cell phones allow you to talk to people that you know (for the most part) and operate in the same manner as a regular telephone, save that you take the cell with you, and you are generally tied in the same building with a standard telephone. It's hard to imagine someone doing that as a hobby, although there are a lot of people who spend a lot of time using them.

So what makes a youngster decide to become a Ham?

We can try using the input of those who became Hams at a young age. Most of what I have heard is that the person was very interested in the technical aspects involved with getting on the air. Making antennas, building rigs, and getting them on the air was a big part of the attraction.

In the end, I believe that it is young people that have a technical interest that will likely become Hams.

And that, I believe, is the crux of the issue.

America is not a place that encourages those who might be thinking of a technical career. We have a tendency to encourage a more "pop culture" outlook, which as often as not discounts actual learning for "street cred", and actually turns the smart person into an object of ridicule. There are levels, and there are levels. If a person is intelligent, and wants a good livelihood, you will find careers that are acceptable. You can be a movie star, or perhaps a lawyer. A whole spectrum follows, but engineering and the technical fields are not very high on that list.

How often is the Techie portrayed as a sort of Bill Nye, the science guy type (at best). How about the smart woman who takes off her glasses and suddenly becomes the hot babe? Professor Frink on "The Simpsons"? Pop culture is not kind to the technical types.

My experiences with programs like "bring your sons and daughters to work day" shows that almost none of the kids is even thinking of a technical field. A lot want to be lawyers.

Once in the past, we were scared into thinking that maybe science and technology was maybe not such a bad thing. That happened when the commies launched Sputnik. Suddenly it seemed important that at least some of our kids decided to work in the sciences. Hopefully we will decide that again without having to be shocked into it.

I am pretty firmly convinced that until we stop catering to the least common denominator, until we stop marginalizing the technically and scientifically inclined, we will not find many youngsters who want to come into our hobby.

Before the internet and cell phones, we had television and regular phones.

> Why go through the hassle of getting a license and radio
> equipment only to find out that the people you work and play with are
> not on the bands.

??? I guess your outlook and idea of what Ham radio is is to chat with
your buds? In that respect, you are probably correct. If all you want to
do is *that*, you are better served by chat rooms or the telephone. Why
on earth anyone with that as their main interest would become a ham is
beyond me. Ham radio is not the best hobby for that, although we can do
that.

They don't know what see you on 2 meters means - and
> when it is explained most of them say but I can do that on a cell phone
> with lots of people right now.

A person that gives that sort of answer is never going to be a Ham.

I would tend to agree with that. All through school, I was somewhat of an
"outcast" because I was interested in science and technology.

What chance ham radio had to interest young people is loooong gone.
(...of course arrl will never admit to this, to them it's still sometime in
1965)

> One of the reasons that is given very often is that Amateur radio is in
> some sort of competition with the Internet. Let us look at this theory.

Here's another 'white paper' theory:

Kids & INTERNET: Instant Messager, Chat Rooms, Videoconference
in REAL TIME with your friends, Play games (Halo for example) over
a Network with your friends, send messages via cellphone to e-mail and
visa-versa, computers are cheap $300 for a P4 fully loaded at
C-shows...etc...etc...

Kids and HAM RADIO: Radios can be expensive, big antennas needed if
you want HF, all to talk to are sour old men (or retro-bigots if your on
75 Meters at night) who hate kids for the most part, packet-radio a joke
at 9600 baud (circa 1981 speed!!) compared to DSL, radios expensive to
fix if they break and most radios (except yaesu) are built like a cheap VCR
kids on ham few and far between.....etc

any questions?

(it sucks eh?)

And isn't that a strange thing? Women especially, can be ostracized for interest in "non-womanly" things. And that pressure to conform can be pretty tough. Good to see you didn't cave.

Lets see now, how did it go???

I wanta be a Chairborne Ranger...
I want to dream of the life of Danger.......

I remember seeing those in living color, smack in the middle of Saigon. I was ashamed to admit I was in the Air Force. The only thing strack I saw was a set of silver stripes that I was ordered to remove due to they made good targets.

Ah yes....I wanna be a chariborne ranger.

Before the internet and cell phones, we had television and regular phones.

> Why go through the hassle of getting a license and radio
> equipment only to find out that the people you work and play with are
> not on the bands.

??? I guess your outlook and idea of what Ham radio is is to chat with your buds? In that respect, you are probably correct. If all you want to do is *that*, you are better served by chat rooms or the telephone. Why on earth anyone with that as their main interest would become a ham is beyond me. Ham radio is not the best hobby for that, although we can do that.

They don't know what see you on 2 meters means - and
> when it is explained most of them say but I can do that on a cell phone
> with lots of people right now.

A person that gives that sort of answer is never going to be a Ham.

I was assigned to a couple signal units in my Army days. Thats right Lennie, I have BOTH Air Force and Army time. And if it matters, I was in signal/commo operations/maintenance all the way.

But you don't see me "living in my past" as you seem to do. Although I do admit to some problems with startle response and bad dreams from time to time. But I don't care to, nor NEED to elaborate on that either.

I really do feel sorry for you Lennie. Perhaps you should just take a break and get a grip on what's left of your life.

Veteran USAF, 1964 to 1968
Veteran USArmy, 1971 to 1979

(and to save you the trouble of asking why I didn't go for 20).....I am 100% service connected with the VA for injuries received in Vietnam).

There you are Lennie, putz, take a shot.

Well there is where they got you toddieboy, you see whatever you have to say is of no direct interest to radio amateurs (or to anyone for that matter).

Bullshit. Unless they have a good reason, they can't be
"watching" somebody, dumbass.
You sure are as ignorant of the law as you are with everything
else.

> It has not escaped the Chief's attention that you live only a
couple of
> blocks from the local grade school.

So? Roger has lived near a local greade school for over 10
years,DUMBASS! However, your police chief has repeatedly told
you not to hang around the one near you, didn't he? And not to
wear that raincoat with nothing on underneath it while you drool
over the little boys playing at recess, Porky.

> The only reason you have not messed with the kids, like you
did in
> Florida,

He did? That's news to everybody who has a clue, DUMBASS!
Funny, how the FDLE has no record of such activities. You lose
again.

> is that you know the local police officers are watching you
> very closely.

Oh, Since when?

I met up with a Ranger at Benning who apparently disagreed. I asked
him how he liked jumping, and he said he had no choice. I asked him
what he meant, and he told me that there was no such thing as a
perfectly good Air Force airplane. So I asked him if there was such a
thing as a perfectly good Army parachute.

Double or triple that to do it in order to

CW as a requirement for access to HF was dropped as at 01 Jan 2004. There has not been the expected massive increase in amateur licences - I think that VK currently has around 10,000 licenced amateurs (plus or minus a few) - with numbers pretty stagnant/decreasing slightly. I feel that there has been enough time for the expected increase to be visible, but this has yet to occur - maybe the majority of those with an interest in radios already have their licences, or lost interest in the subject - who knows. Onto another part of the thread - age. Most amateurs are older - when I took out my licence aged 23, I was one of the youngest around - going to the first club meeting, I was somewhat dismayed to see that I was the youngest by at least ten years, but at least I had lots of experience to learn from. Nowdays (ten years later), I am seeing young people getting into the hobby, but not in the numbers that I would like to see, nor in the numbers that we need to have a healthy population. Buggered if I know what to do, but the new foundation licence that is due to come in (not sure when as the date seems to continue slipping right) has great promise to at least increase numbers.

Matt

Oh, yes. It is YOU, Scat Boy. Now that the house across the street has been
sold you no longer have to peek out your curtains to see if there is a
remote camera in there.
Your paranoia must have dropped by two points.

I see that you are as yet unsure of who is posting what in regards to you.
One minute I am Lloyd, the next I am Dave, and the next I am Schwartz. Life
in that jumbled up cranium of yours must be one big, fuzzy blur. I guess
your prescription meds do that, huh?

Take another prescript. Thorazine, Scat Boy. Then it will be Happy Trails To
You as you nod off into Happy Happy Land.

Oh, wait, you are not Roger, but only a facsimile. How forgetful of me.

I would tend to agree with that. All through school, I was somewhat of an
"outcast" because I was interested in science and technology.

Dee D. Flint, N8UZE
//

That explains why you were not asked to the proms.
All this time I had suspected it was a result of your condescending
attitude.

Wow! Did someone hit the soft spot on Baby Roger's head?
Of course the response from the Social Misfit was to be expected.

What else is new?

Wogie Wabbit...it is no secwet that you were under the care of a doctor
for your mental confusion. Your pwoblems, Wogie, cost you a marriage,
your kids, and a home.
It is perfectly understandable that you deny same. Anybody in your shoes
would do likewise.

After all, Wogie, who in their right mind would want the world to know
that they have a problem with mental stability? And far be it for us to

comment on you being the recipient of monthly SSI checks. No, not us. We wouldn't want to let the 'cat out of the bag' that you are unemployable because of your disability. That is your business and us three Lloyds respect your right to privacy, just as you do ours.

Message-ID: <d7bqve$8l3$0@pita.alt.net>
Source record: 109027

> One of the reasons that is given very often is that Amateur radio is in
> some sort of competition with the Internet. Let us look at this theory.

Here's another 'white paper' theory:

Kids & INTERNET: Instant Messager, Chat Rooms, Videoconference
in REAL TIME with your friends, Play games (Halo for example) over
a Network with your friends, send messages via cellphone to e-mail and
visa-versa, computers are cheap $300 for a P4 fully loaded at
C-shows...etc...etc...

Kids and HAM RADIO: Radios can be expensive, big antennas needed if
you want HF, all to talk to are sour old men (or retro-bigots if your on
75 Meters at night) who hate kids for the most part, packet-radio a joke
at 9600 baud (circa 1981 speed!!) compared to DSL, radios expensive to
fix if they break and most radios (except yaesu) are built like a cheap VCR
kids on ham few and far between.....etc

any questions?

;;

Nope. You just about covered it all.
That leaves only the holdout dregs of CB who are now getting Tech licenses
and migrating to two meters.
You can hear them every day on the local repeaters. They use CB slang such
as "hate and discontent", "make my phone go ringy-dingy", "I heard that, I
did", and the all-time favorite? "Ten four, good buddy."
They buy a Rad Shack 2 meter ht and hammer the repeaters all day long. Ask
one of them to switch over to simplex and you can hear the confusion in
their voices. "Simplex. What is that?" or, "I can't get out that far."
Oh, and for laughs just listen to the Techies as they give each other signal
reports on a repeater. They tell each other they are full quieting and have
good audio. Oh, duh!
The ultimate hoot for me was when last week a couple of Techies were
hammering the daylights out of a local repeater. One was getting out of
range and his Techie buddie suggested they move to another repeater. What
did I hear but the one Tech say to the other, "I am gonna QSY to my truck."
Lids. Lids and more Lids.

(ditttos on the Yaesu gear. I wouldn't own anything but)

> some morons on the newsgroup on the internet.

Then why do you insist on bringing it here?

And don't you realize that since YOU are determining the content,
NOT the people listening, YOU are going to make a LOT of enemies?

You keep calling all the people who are potential listeners to your
broadcasts "morons"...How do you intend to develop any listener base by
insulting everyone you come into contact with.

Pay attention, Todd...

No one in this forum, and there are quite a few disparate
ideologies here, likes your idea or supports you. When this many
people who can't agree on anything else DO agree on ONE thing, you can
bet your bottom dollar that it's true. And we all agree you're an
idiot.

We don't care about your half-baked "theories". They are as dumb
as they come. They're unsafe, to boot.

Your opinions on FCC practice and policy are based upon your
emotional, knee jerk reactions based on YOUR failures to get a
broadcast license which was, in and of itself, due to YOUR unworthiness
for said licensure.

You're a loser all the way around, and we (yes...the "royal "we")
don't give a hoot about you or your opinions

It's not about "suppressing (your) free speech".."Speech" all you
want to...we just don't want to HEAR it, Todd. So if you keep running
into brick walls everytime you open your mouth, don't say you weren't
told.

Steve, K4YZ

I don't think a year is really long enough to tell. In addition, is the word getting out to prospective hams? Did the decrease in numbers come from lack of interest on the part of prospective hams or the failure to find prospective hams? Changes in licensing will have no noticeable impact when people don't even know that ham radio exists or barely know it exists but have no idea what it is all about.

> the good old days.

Part of the solution is the replacement mentioned above. Another
is to enlarge the question pools, not just in quantity but in
variety of questions.

> About the only way I can think of to accomplish this
> would be to add a LOT of questions to the test.

FCC policy disagrees.

Consider the written testing required to step from
General to Extra. In the really bad
old days (before 1967, when the Advanced was closed off)
a prospective Extra had to take a written test of ~100 questions.

After 1967, that test was split into two tests (Advanced and
Extra) totalling about the same number of questions.

Before the 2000 restructuring, the step took two tests totalling 90
questions.

Now it takes one 50 question test.

See the pattern?

>
> Right. I think that most people that want to learn above
> the Technician level *want* to know the material.

Depends entirely on the person. And the point is what
the *system* tends to reward.
>
> And frankly, there were enough bad eggs let in under
> the old system,
> that I think that those who tout the superior Hams

> produced by the old
> system might want to consider the subject before
> yapping about folks like me.

How many bad eggs? And what kind? I was there - nothing like
W6NUT, 3950 or 14.313 existed back then. Nothing like ex-KG6IRO
and the guy on the West Coast who sent false distress signals
on the marine VHF band.

Yes, some hams back
then did break the rules. But compare the violations of those
days to the violations of today, in both number and quantity.

No test, code or written, can be a perfect "bad egg filter".
Particularly not a one-shot test that confers privileges that
are renewable indefinitely.

But that doesn't mean there's no difference between tests and
test methods.

How would it make you *feel*, Mike?

> But your point as I see it is that things have been made
> so much easier
> that people such as myself can just step in easily,
> following in the
> footsteps of people who had to really *earn* their licenses.

No, that's not the point.

The point is that such a change would breed resentment in those
who had met the old standard.

The problem is that the resentment should be against the *system*,
not the people, unless they had something to do with changing
the system.

> Those who came before are therefore justified in resenting the
> newcomers because we didn't have to prove ourselves (take the
> harder test)

They may be justified in resenting the *system*, but not the
people. Big difference.
>
> That there are people out there that feel that way is of

That's just wrong.

> Thats no way to encourage folks.
>

Agreed.

But at the same time it's important to understand how the system has changed.

The "middle finger salute" again, eh Lennie...Whew...

Arf, Lennie served. We give him that.

The problem stems from his efforts to validate his "Newsgroup Combat Award"...He's made several (one within the last few days...) where he's tried to associate his "combat" inn this newsgroup with the REAL combat that killed several soldiers in a unit that he subsequently belonged to.

Of course they died three years before he was even inducted into the Army...Pretty disgusting behaviour for a guy who claims to "honor" war dead.

> ex-RA16408336, USA, 1952-1960, Signal Corps, Sgt (E-5)

The toad caused illegal malicious interference last night.
A local group of hams were having an informal net on 14.321. MHz last
night when out of the blue the toad started his monolog show right up on
top of them! At least 5 of the group got recordings! Shame on you toad.
Write all the letters you want, but you are about to get one yourself idiot!

If you are into RACES/ARES or the like, then Ham radio is very useful. What happens when the cell towers, twisted pair & trunked radio systems are overloaded or damaged in a disaster? That is where ham radio can shine. Also it may not be "high tech", but when you build you own Yagi or cubical quad antenna & know that you have to think a little bit to make communication in a certain country (what band to use to make the hop) takes some thought vs. cell phone & internet which takes very little thought. My .02

"Before the internet and cell phones, we had television and regular
phones. "
JS> That is true, we did have television and land line telephones,
with all of their inherent limitations. But the internet provides a
range of communication that is unmatched by any other method of
communication, including 13 channels of VHF, a smattering of channels
on UHF on TV and rotary dial phones.

> Why go through the hassle of getting a license and radio
> equipment only to find out that the people you work and play with are
> not on the bands.

"??? I guess your outlook and idea of what Ham radio is is to
chat with
your buds? In that respect, you are probably correct. If all you want
to
do is *that*, you are better served by chat rooms or the telephone. Why

on earth anyone with that as their main interest would become a ham is
beyond me. Ham radio is not the best hobby for that, although we can do

that. "

JS> Communication is what amateur radio is about...people talking with
one another usually about everyday things or as you say "chatting with
their buds". And it is about the camraderie of people enjoying and
talking about their equipment. And how could we forget band congesting
contesting - how many people one can have a 5 word conversation with
over a set period of time. The hobby isn't about providing useful
emergency communications however. The last time I heard a hurricane
net it descended into chaos with hams trampling over one another trying
to be the first to contact someone in the emergency area. Hams have
not "saved the day" other than in their dreams for a long long time.

If ham radio is about something else, please inform me as well as the
potential hams who see amateur radio as little more than an expensive
and self-limiting way of talking to one another. Or said another way
if you stripped the communications aspect from the hobby what would be
left. And how many people would queue up for licenses?

Hams take a cavalier attitude when it comes to explaining the value of
ham radio, they end up driving the young new entrants away. They find
it difficult to consider new ways that might attract new blood into the
hobby. Hams have to be able to explain what the benefits of being a
ham are. Unfortunately most adopt a bunker mentality that goes like

this: "The requirements are what they are because I had to take them long long ago. Yes morse code is important, but I really can't tell you why. If you have to ask what the benefits of being a ham are, then there is a good chance you won't enjoy being a ham. Please consider another hobby."

I don't think so...

There's two day's worth of you and Lennie glad-handing each other.

> Now explain why you posted my street number in this forum.

What number is your street? Most streets have names, although my
street IS a number..."(12th Avenue)"

A bit paranoid, Brain?

Been keeping a close eye on the mail box, UPS and Fedex guys to see
if Mrs Brain might get a package YOU wouldn't want her to see...???

Keeping a watch out for any black helicopters or unmarked vans
prowling the neighborhood?

You need a break, Brain...Or quit chasing Lennie's tail in public
like that...Maybe the methane has you delirious.

Steve, K4YZ

1771. Brian P Burke Remains A Coward...And It Was So Easy To Avoid...

Not "heresay".

Independently verifiable information...which you are too cowardly
to verify.

> > What's missing is adequate testosterone levels in the Burke
> > residence to verify them.
>
> Verifying your preposterous claims is not my job.

There's nothing preposterous about any of them.

> > This would be directly due to Brian P Burke being a coward.
>
> Got anything better than that?

Nope. That pretty well summed it up. Direct. Concise.
Accurate.

> > Not my problem.
>
> Lack of AUTHENTIC documentation is your problem. Put Up or Shut Up.

Facts have already been disseminated. You refuse to verify them.

This substantiates my claim that Brian P Burke is a coward.
>
> Remember your own words, "No documentation means it never happened."

You've been given faaaaaaaaaaaaaaaaaaar more "documentation" than you ever gave for any ONE thing ever asked of you.

Keeps you high on the "Bragged About It But Got Nothing To Show For It" list.

> For future reference, stop making claims that you can't prove.

You and Lennie are the only one's who bring up my prior service record...And I've answered why I won't got "there" any more.

However you HAVE been given dates, times, places, callsigns for other radio related evolutions that I have been through.

You won't follow up.

> Makes you look even more stupid than you already are.

What does? You asked for details. You got them. Then you change the parameters and demand "documentation".

Sorry, Brain...You've already been drawn and quartered on this one.

> Best of Luck.

For what? Proving you a coward and liar? No luck needed there...You do all the work for me!

Thanks!

Steve, K4YZ

Ouch: How do you spell clueless? I loves you dearly Michael, you're a very nice guy and yer heart is in the right place but you have this frustrating penchant for getting over yer head at warp speed when discussions turn to even moderately deep-end techie sorts of topics. You done it again.

This guy is obviously into low-band weak signal dxing on 160/80/40 etc. Those of us take this game seriously understand what it takes in the way of rcvr performance. He's talking about using his modded R4-C as an outboard RX because of it's legendary front end performance, it's blocking dynamic range and it's third order intercept points as they relate to successfully dealing with very difficult band conditions. Which leaves out your Heath treasures and all members of the FT-1000 clan in this particular pursuit.

"If the tube stuff is better, then I'd go for it in a minute" eh? Welp there ya go.

>
> Does anyone have statistics that go back three or four decades??
>

Part of the problem here is that the "base" demographic numbers of total US population is changing. The increase or decrease in the absolute numbers of hams is not germane.

A more accurate statistic for the last 40-50 years is the change in the percentage of hams in the total US population.

Example:

say you have 200,000 hams in 1930 in a population of 200 million (1%) vs 250,000 in 2000 in a population of 350 million.
Even though you have an increase in the ABSOLUTE number of hams the PERCENTAGE of hams is going down.
In this example: As a group, the relative impact and visibility of hams vs the total US population is going down.

Does any one know the URL of an accurate set of historical ham population data? Hopefuly from the very begiining of FCC licensing?

The problem with that is that you've just alienated the very group
that needs to be part of amateur radio (for the hobby, for them).
YOu can't go into a room full of people you want to attract and
call them names.

I do argue that the failure of amateur radio to attract young people is because we a) aren't trying and b)don't know how.

The minute you characterize all the young as some monolithic group, you are saying you don't know the kids, and if you don't know them, then there's no way of bridging that gap. I'm not sure how we do it, but I do know that one has to get into their heads to reach them.

Keep in mind that decades ago, amateur radio was hardly a mainstreem interest among the population. SOme would be interested, many would not. There'd be people like you back then characterizing the young people, minus the cellphones, basically saying the same thing. Ultimately, little has changed.

Hello, Mike

You've hit the nail on the head. Look at one reply to Dee's comment.

I went to a pipe organ concert last evening and ran into a guy who has been
in broadcasting. I'm glad I got out of broadcasting. He was glad he was
approaching retirement. He told me that he hated news. Oh, if you are an
anchor or weatherman, you can make $150,000 a year, no sweat. But for the
folks that have to take the equipment and run the recorders or gather the
news for that personality, wages are terrible.

I was in broadcasting at one time. I served as an engineer at a couple of stations and chief engineer of one station. The pay was pretty good.

Then the FCC changed things. No more 1st class radiotelephone license required. This allowed anyone to get in with no prior anything.

Stations (due to competition from satellite and cable tv) started networking. One local station let go most of the staff and they get their feed from another station in Syracuse (that also feeds other stations owned by the same entity). A skeleton crew for the news, network feeds during the day, and the feed from Syracuse otherwise. One person serves as chief engineer for 5 stations and they run him ragged. And he makes less than those on-air personalities that might work 4 hours per day (plus a few more researching, but certainly less than 8 hours per day). BTW, the interns work for *nothing*. It is part of their college "education". Since they receive college credit for the work, there is no labor law violation. I've heard that the working jobs are paying perhaps 7 to 12 bucks per hour. Why would someone want to get into that? Heck, don't think, cut grass, and you'll make perhaps 8 or 10.

I recently posted a link. Most interesting. Direct TV (which I subscribe to) is launching a number of satellites to feed high-definition to the U.S. Guess who launched the satellite for them? Russia!

China has most of our manufacturing.

I refuse to work as a toolmaker for $10.00 per hour. I'd take a job as a janitor before virtually giving away labor that should be around $30.00 per hour.

Many folks that got hit with the latest cuts where I put in most of my career are back working as temps - at about 60% wages and no benefits.

Fortunately, they didn't pull the plug fast enough on me. Although my pension is small, I do get health coverage (at least most of it) from my former employer.

I am not considering just not working. I won't have the income that I'd like, but enough to manage on. Social Insecurity is only 4 1/2 years away.

I had enough technical knowledge stolen from me over the years at that company. The last time, I was speaking with a supervisor about how terrible the code was in their programmable ladder controllers. I told him that scan rates could be cut by a factor of 7 and cycle times improved. I also mentioned that I had automated ladder generation with optimization back around 1982.

He stated that if I could do it, he'd take me in to see the manager. I told him that I had the code already but was not going to give it to the department because we were going to loose our jobs anyway.

So, China does the work manually. They didn't want the machines.

Fasten your seatbelts. We're going down fast and it is going to be a bumpy ride.

Yeh, it's just you.

Now explain why you posted my street number in this forum.
>>

I wish he'd post it again.

And why should anybody explain anything to you? You don't count.

The number you posted, "Lessee....430." There was absolutely no
"context" for that kind of post. Completely out of left field, with
the intention of intimidation.

Most streets have names,
> although my
> > street IS a number..."(12th Avenue)"

I could care less what your street is.

> Are you stalking him, Nursie?

Steve posted my county in here, then my street number just before the
Dayton Hamfest. I live in Ohio and am probably on a circuitous route
that a crazy man would take to get to Dayton.

He works hard at intimidation, but he just doesn't have that big of a
presence to deliver any "pucker factor" as he calls it. The only one
he's fooling is himself.

And as of yet, Steve has absolutely >>>NO<<< explanation on why he
posted, "Lessee....430" out of left field. I wonder what kind of
weasely words he'll come up with on how that got injected into a RRAP
posting of his.

> > A bit paranoid, Brain?

I was one of those back in the "Golden Era" of ham radio. There were two basic types of kids who got into ham radio. Those who had a strong interest in electronics and enjoyed building their rigs and such many of whom went on to become EEs and EE techs.

The other category consisted of kids whose interests were in using ham radio to *communicate*. I was one of those. I was a certified geek from a tender age but I didn't have much interest in electronics as such because I was far more interested in things mechanical which eventually led me into a career in mechanical enginering with DXing and contesting strictly on a hobby basis. Others in this group had no particular interests in technical matters at all.

When I look back at all the kid hams I knew and what they've done since then on the job and in the hobby it's about a 30/70 split. 30% are into electronics, 70% are not and never were. One of my young ham acquaintances from back then became a priest for instance. As often as not having to study electronics and do soldering iron pushups were friggin' obstacles to getting on the air.

> In the end, I believe that it is young people that have a technical
> interest that will likely become Hams.
>
> And that, I believe, is the crux of the issue.

Sort of. Bottom line here though is that ham radio has historically attracted a much broader group of kids than just those with an interest in electronics.

>
> America is not a place that encourages those who might be thinking of a
> technical career. We have a tendency to encourage a more "pop culture"
> outlook, which as often as not discounts actual learning for "street
> cred",

There's another factor here. I raised three kids and they're raising a total of five kids under Pop-pop's "close supervision". The problem I'm seeing at least within today's version of the Yuppy class is overprogrammed kids and sports. Their lives are consumed by carefully planned "events" mom & dad have arranged for them. Football practice here then more football practice, soccer practice, two swim meets this week and oops let's not forget Corryne's dance class and there goes mom "Crap, I gotta be in three places at the same time again!"

There aren't any open slots in the kids' schedules for some quiet soldering iron time on their own. It's obsessive, massive and insane.

> and actually turns the smart person into an object of ridicule.

I'm not laying any claims to being particulary smart and I took a lot of cheap shots about being a geek up thru my junior high school years. I wasn't alone with this problem either, all us young hams had to deal with it to one extent or another. I was lucky because I've never been bothered by "peer pressure", fuggem, "meet me out by the swings after school . . ". The wilting lilly type geeks had it much tougher but I don't remember any who pulled out of ham radio because of the crap they took from other kids.

The big drivers kids have is their parents, if the parents support their interests the geeks will be OK. If the parents don't support or think much of their interests the geek kids have a real problem.

My parents were very supportive of my interest in ham radio (except when I blotted out the TV while Dad while watching the Friday nite Gillete fights. "Radios off NOW". Click). I don't see where life has changed very much in this respect.

Kids ain't stupid, they follow the money. Problem there is that one of these days the lawyer biz is gonna tank because of overpopulation.

> Once in the past, we were scared into thinking that maybe science and
> technology was maybe not such a bad thing. That happened when the
> commies launched Sputnik. Suddenly it seemed important that at least
> some of our kids decided to work in the sciences. Hopefully we will
> decide that again without having to be shocked into it.

Don't even get me started on that debacle. I was one of the first to find Sputnik 1 on 15M which I did with the ham club's old Hammarlund rcvr. Long story but I'll spare ya that one.

Kids flocked to engineering schools in battalions then they dumped into the Apollo program. When that bubble broke months after the Apollo program ended several years later something like 200,000 graduate engineers found themselves out on the bricks looking for jobs.

I met a guy in that timeframe who was one of those. You won't believe this one but it's true: This guy had spent his entire professional career "engineering" NASA control and annunciator panel PILOT LAMPS for God's sake! He finally found a job as a real estate agent and barely beat the sheriff to the title for his abode. Thousands of others weren't so lucky.

These guys (and a few gals, very few) have raised their kids and are becoming grandparents today. They have clout, they been there in volume. I wouldn't expect them to encourage acquiring technical educations, at least not in engineering, I would expect a lot of lingering bitterness about engineering careers on their parts.

As much as I've enjoyed my 40+ year engineering career even I'd hesitate about encouraging a kid to get into the biz. Like everything else the engineering of the products we use is being shipped offshore. I dunno, don't look good to me . .

> I am pretty firmly convinced that until we stop catering to the least
> common denominator, until we stop marginalizing the technically and
> scientifically inclined, we will not find many youngsters who want to
> come into our hobby.

I agree with that 100% but it would take years to have any noticeable effect.

Taking the topic out a bit further so what if ham radio shrinks, even if it shrinks a bunch? What would be the real-world implications? A bit less clout at the FCC? The League might have to lay off a few bodies? After that what?? We have a helluva lot more hams today per capita today than we had back in the "Golden Era". If we lost half of us we'd still be ahead. We've been sitting ducks for years with respect to losing some of our spectrum space above 30Mhz. and it has nothing do with the number of valid ham tickets.

The huge change from the "Golden Era" involves the HF spectrum. HF radio has become almost passe as far as it's commercial value is concerned. Hell, the FCC is dumping BPL all over it, sez it all. So I don't see where even a precipitous drop the number of ham tickets will have any effect on our HF privs. So what's left to get excited about??

With or without kids citizens of all ages will continue to come into the hobby which will continue to evolve just like it has for the past century. I dunno what ham radio will be like 25-50 out but my hunch is that it'll be smaller, maybe much smaller but still very much alive and

well. The future is much bigger than any of us or the even the ARRL (gasp!), there's absolutely nothing we can do about any of it. Rants and hand-wringing in this NG notwithstanding.

Let it roll and enjoy the trip people.

> >
> > Verifying your preposterous claims is not my job.
>
> There's nothing preposterous about any of them.

Given your demonstrated knowledge of military and MARS communications,
I'd say your claims are preposterous. That's why you need to post
authentic documentation. No more claims.

Tell you what, I'll let you make a copy of your letter of appointment
to "A" NCOIC of Okinawa/MARS, and you can black out your SSN on the
copy with a sharpie. Then scan it in and replace that silly photo of
yourself on QRZ with authentic documentation that has been sanitized of
your SSN. You only need to leave it up for a couple of days until I
have a chance to read it, then if it looks on the up and up, I'll grant
you your claim.

But don't go expecting an apology or anything like that because you did it to yourself. Remember what you said, "No documentation means you didn't do it and you're lying about it." What was I to think without you providing documentation???

> > > This would be directly due to Brian P Burke being a coward.
> >
> > Got anything better than that?
>
> Nope. That pretty well summed it up. Direct. Concise.
> Accurate.

Yet you are the one not posting documentation. You are the one trying to intimidate. You are the coward, hiding behind a bully. You are both a coward and a bully, as bullies usually are.

> > > Not my problem.
> >
> > Lack of AUTHENTIC documentation is your problem. Put Up or Shut Up.
>
> Facts have already been disseminated. You refuse to verify them.
>
> This substantiates my claim that Brian P Burke is a coward.

Hi! You must provide authentic documentation of your claims. Until then they are just more Robeson nonsense.

> > Remember your own words, "No documentation means it never happened."
>
> You've been given faaaaaaaaaaaaaaaaaaar more "documentation" than
> you ever gave for any ONE thing ever asked of you.

Documentation? All I've seen are claims.

> Keeps you high on the "Bragged About It But Got Nothing To Show
> For It" list.

And now you're on the list. Got documentation?

> > For future reference, stop making claims that you can't prove.
>
> You and Lennie are the only one's who bring up my prior service
> record...And I've answered why I won't got "there" any more.

It's clear why you won't go there. Your service record must be shameful.

But then you trot yourself out in any kind of uniform that you can in order to look important.

> However you HAVE been given dates, times, places, callsigns for
> other radio related evolutions that I have been through.

Evolutions? Hi! Congratulations. You've evovled into a ham, the pinnacle of Radiodom.

> You won't follow up.

The only follow-up I'll do is to read your authentic documentation.
Got any?

> > Makes you look even more stupid than you already are.
>
> What does? You asked for details. You got them.

You're a liar. I don't trust your "details." I asked for
documentation, then you claim to have posted "details" a year ago.
Wunderful. I don't care about your claimed details. I asked for
documentation. >Authentic< documentation.

Then you
> change the parameters and demand "documentation".

I asked you for documentation, just as you've asked me for
documentation. I have not provided you with documentation, and so you
have labeled me a liar, a coward, and a gay man. Your times up. Post
it now.

> Sorry, Brain...You've already been drawn and quartered on this
> one.

No Steve, you've only proved that you can't stand up to the kind of
scrutiny that you've placed upon others. You fail miserably when
measured by your own words, your own rules, your own logic. Again.

Now about posting my street number on RRAP. Why did you do that?

Every once in a blue moon I regress back into my mischevious mode and
at the tail end of a qso on one of the heavily-used 2M machines I'll
drop in the "Ten 'Fo Good Buddy" routine just see what happens. On a
couple of these occasions yup, sure enough here cometh one of the
self-appointed repeater cops with a stern lecture about "proper
operating practices". I just leave well enough alone and listen to all
the squelch tails which pop up. A buddy told me that one of these
goofballs got up at a meeting and asked "what can we do about w3rv?"

You need to gain another 7 years in the saddle before you'll be 65
which is THE major milestone. After you hit that one you have not only
a free pass to having both feet in your mouth but it's also *expected*.
Geezerhood is a great, you'll enjoy it no end.

>> Hello Arf!,
>
>Bow wow.

Brian, Pastor Miccolis ASSUMES this anony-mouse ("Arf! Arf!")
is legitimate...because he (in anonymity) attacks me. That
is all part of the PCTA Extra Double Standard hypocrisy.

The Pastor does give lip-service to all the PC phrases AS IF
he "had been there, done that" when his real purpose is to
level a personal attack on his newsgroup "opponents."

That is followed by:

>> Len does not answer most questions. He says they're "loaded",
>> even when it's clear they are not.

"It is clear they are not" is one of the most hypocritical
of the Pastor's statements. Jimmie LOADS questions in order
to elicit a response he can then attack them as "mistaken."

>>
>> > What was your MOS and what did
>> > you do in the service of our country?
>>
>> Now ya did it - he'll do a couple dozen kilobytes about ADA
>> *again*...

Poor Jimmie. NEVER was in the military, NEVER worked any
professional communications, NEVER did much except play with
his "homebuilt" hobby radios. But, Jimmie will idolize and
rhapsodize on the pioneers of radio doing their thing before
Jimmie's existance...so much so that he makes them into
"heroes" and near-mythological figures.

>> > It seems that you and bb have a fair share of hot air
>> > with little to substantiate your claims.
>>
>> Here, I'll sum it up for you:
>>

>> Anderson's views, he/she will be the target of Mr. Anderson's insults,
>> ridicule, name-calling, factual errors, ethnic/gender/racial slurs,
>> excessive emoticons and general infantile behavior."

All of that to summarize poor Jimmie NOT being able to take
the heat of discussion ON subjects. He MUST go into a
Personal Attack mode to "defend himself." His ego (his most
sacred cow) was severely injured and he seeks retribution.
He is still wearing bandages over his goring of several years
back...

>> >
>> > Stand up. Hook up. Stand in the door.
>> >
>> > Airborne!
>>
>> Gotta take some serious cajones to jump out of an aircraft that
>> is flying perfectly well.

Gotta take some serious "cajones" to ENLIST voluntarily...or
even accept a draft notice (which Jimmie never did).

Jimmie "knows" all about parachute jumping in the military.

Jimmie must think that "cajones" is acceptible but "balls" is
not acceptible when both words are useable in the same
context. He can be very prim, proper, and oh-so-"civil" by
using a Spanish colloquialism in regards to Manly Courage.

>I met up with a Ranger at Benning who apparently disagreed. I asked
>him how he liked jumping, and he said he had no choice. I asked him
>what he meant, and he told me that there was no such thing as a
>perfectly good Air Force airplane. So I asked him if there was such a
>thing as a perfectly good Army parachute.

Heh heh heh. Cross fingers and hope all the QC people did
their thing properly...on airplanes as well as parachutes.

>>Double or triple that to do it in order to
>>engage hostile folks on the ground.

Jimmie must think that anyone against HIS opinions in here are
"hostiles." Anyone acting against HIS opinions is not considered
"patriotic." :-)

>> Here's a big "thank you" to you and all who have served our country,
>> Arf. Both in uniform and in other ways.
>
>What other ways?

According to Jimmie's general outlook, those "other ways" must be
to Support and Defend the Constitution of the ARRL and preserve

the morse code test for amateur radio license examinations
(against all oppressors). Very Patriotic. Very Memorable.
Because:

"No matter what employment, education, experience or
government/military service a person has, if that person opposes Mr.
Miccolis' views, he/she will be the target of Mr. Miccolis' insults,
ridicule, name-calling, factual errors, ethnic/gender/racial slurs,
excessive emoticons and general infantile behavior."

[see how easy that was? :-)]

Irrelevant. I've never even commented anywhere on the location
of Fort Campbell. :-)

But, the Avenging Angle of Dearth, ever vigilant to defend the
United Stevies of America (against all oppressors) simply took
something out of context in order to Personally Attack me once
again.

Gen Chesty "Stick Time" Robeson seems to suffer vision losses
both on his own writing ant that of others. [too much Viagra
intake resulting in loss of vision?] The anony-mouse wrote
"...base saddles the state line..." when the word "saddle"
should have been "STRADDLES." :-)

The only "papers" Stebie has are the morning ones (printed on
newsprint) and probably filched from a neighbor's driveway.

Try the Sunday editions' Beetle Bailey cartoon strip and
picture the First Sergeant as "Seven Hostile Actions" Stebie.

That takes some imagination since the comic strip version has
at least one tooth. [we don't see any teeth showing in Stebie's
pictures]

>> > As to working as a civilian on DoD contracts, there's not much

The Avenging Angle of Dearth is going to redraw his hyperbole of
the (unamed) "PhD" at (the former) NADC in PA who supposedly
"critiqued" my "job performance" while "working for the Navy"
in 1971. :-) A very big pile of Stebie BULLSHIT, not even
good for fertilizing anything but Stebie's anger and hatred.

>> The "middle finger salute" again, eh Lennie...Whew...
>
>I can't think of a more deserving tribute to you.
>
>> Arf, Lennie served. We give him that.
>
>As if it were yours to grant.

AS IF this anony-mouse ("Arf! Arf!") ACTUALLY SERVED.

We readers don't have any PROOF of the anony-mousie's
IDENTITY, let alone if this babbler actually served.

But, that is all part of the PCTA Extra Double Standard.
Looking back a few months on Google archives will show
Stebie (The Last Action Hero) becoming incensed, enraged
at OTHER anony-mousies who were "not kind" to Stebie.
Tsk, tsk. Stebie is on-record as having directly insulted
their person with words like "coward."

Stebie is just a duplicious hypocrite, "serving" the
United Stebies of America, one nation invisible,
populated by many imaginative alter egos.

>> The problem stems from his efforts to validate his "Newsgroup
>> Combat Award"...He's made several (one within the last few days...)
>
>several what?

Stebie cannot comprehend what was written. Nineteen members of
the 71st Signal Service Battalion, 8235th AU, United States Army,
were killed in a transport plane crash in SOUTH Korea on 1 Jul 50.
Not in "combat." Those were ordered there by General MacArthur
to reinforce communications in SOUTH Korea as a result of invading
forces from NORTH Korea. Three USAF air crew were also killed.
The main billet of the 71st and also offices of the Army Central
Command (Honshu) was named "Hardy Barracks" in 1952 in honor of
Cpl Elmer Hardy, one of the 19 who perished on 1 Jul 50. The new
transmitter site of Army station ADA (and barracks of B Co.) at
Kashiwa, Japan, was named "Camp Tomlinson" in honor of Captain
Jim Tomlinson, another of the 19 crash victims.

I was assigned to the 71st Signal Service Battalion, 8235th AU,
in February, 1953. Stebie, once again in his angry hatred,
wants to twist that into "cowardice" and "disgrace" and
"dishonor" on my part because I display a sense of pride in
what MY unit did...and continued to do long afterwards. Three
members of the 8235th AU (then renamed Far East Command Signal
Service Battalion) would die in three separate actions while
on TDY (Temporary Duty assignment) in Korea...AFTER the "Truce"
had begun in July, 1953. That "Truce" continues to this day,
the Korean War is NOT OVER. From time to time, armed skirmishes
happen along the Demilitarized Zone, combat on a small scale.

Stebie's "validation" of HIS "combat" is a very UN-detailed,
Ambiguous mention of "participation in seven hostile actions."
The WHEN and WHERE of those "seven hostile actions" has NOT
been stated. Stebie REFUSES to state the WHEN and WHERE.

One can only assume that Stebie is just a damn LIAR, bluffing
in an effort to be more "manly, macho" in his mumblings about
his own "combat experiences."

>> where he's tried to associate his "combat" inn this newsgroup with the
>> REAL combat that killed several soldiers in a unit that he subsequently
>> belonged to.
>
>I suppose all of your seven hostile actions were with non-combat units?

Stebie can't even state the WHEN and WHERE of his "seven hostile
actions." He postures as a Mighty Warrior yet cannot say, other
than his "battles" in here, WHERE he "fought."

>> Of course they died three years before he was even inducted into
>> the Army...Pretty disgusting behaviour for a guy who claims to "honor"
>> war dead.
>
>Nobody in the U.S. Marine Corps died before you were inducted?

Absolutely NONE before his induction...they must "live forever"
according to Stebie..."in his heart."

It would be interesting to see the Last Action Hero spout off
about "dishonor" at any Retreat Ceremony, a Funeral of a non-
marine, any Memorial Day gathering to honor the fallen. It would
be a given that this Last Action Hero (of "seven hostile actions")
would not survive that day...nor would anyone around him be
arrested by REAL authorities. We would then see that this
great "patriot" (of the United Stevies of America) was nothing
more than a bluffing bully, tosser of shit, big loudmouth, and
a representative of modern-day U.S. Amateur Radio behavior.

A problem is that the bluffing bully, big loudmouth, tosser
of shit, and lying story-teller just hasn't let up. He keeps
on LYING, manufacturing things about others that never
happened to them, manufacturing glory about himself that he
cannot PROVE.

Is that what the HOBBY of U.S. amateur radio has become?

I hope not...yet the evidence appears almost daily in here.

>A straight key requires only one finger. I thought a Mighty Macho
>Morseman such as yourself would know that.

The Last Action Hero may not have figured out WHICH finger
to use. He is confronted with a choice of one out of ten.
That may present a difficulty.

Mighty Stebie doesn't NEED fingers. He only has to IMAGINE
sending morse and, lo!, it happens...and he will spend a few
years bragging about his marvelous ability...as an Extra
amateur radio operator...who hasn't shown any knowledge of
maintenance or theory of operation, not even a familiarity
with simple Ohm's Law of Resistance...so then he can chide
and bully all others who don't need morsemanship about
"OPERATING (using morse code)."

Yup. But there's more:

A computer has many uses, from being a glorified typewriter to a
serious research/calculation device to gaming to producing all sorts of
multimedia stuff.

Most decent white-collar jobs today require computer skills. Many
blue-collar jobs also require them.
>

You're missing a couple of other points, Mike.

Computers are all over the place, inexpensive, and often available as
hand-me-downs. PCs only a few years old can be had for next-to-nothing.

Some people live in places where putting up an antenna - *any* antenna
- is banned by CC&Rs. A family isn't likely to move so that Junior can
put up a G5RV.

You missed the point, Mike.

Before cell phones became inexpensive and ubiquitous, the
average person didn't have many options for personal
mobile/portable communications. There was ham radio and
cb and not much else. Cell phones changed all that.

> So what makes a youngster decide to become a Ham?

Same things that make anyone else.
>
> We can try using the input of those who became Hams at a
> young age.

I was one of those people - licensed at age 13. With no
real help from the parents, btw.
>
> In the end, I believe that it is young people

> that have a technical
> interest that will likely become Hams.

More complex than that.

There are three basic areas of interest involved:

1) Technical (likes to fool around with radio stuff)

2) Operating (likes the actual operating experience)

3) Communicating (likes the message content more than
the medium)

Most hams' reasons for getting into the ARS are a mixture
of the three.

For example, I know some DXers whose main focus is #2. They
love the thrill of the chase, hunting down the new ones, etc.
Their stations are technical wonders - but the technical stuff
is simply a means to an end, not the end in itself.

Then there are the ragchew types who have real long-term friendships
on-air. Their focus is mainly #3.

Or the techno types who are always working on a project but rarely on
the air. Once they get something working really well, the excitement is
gone and they're off to something else.

>And that, I believe, is the crux of the issue.
>
I think it's more complex.

No, today is worse. The society seems unshockable. Look at where
so much stuff today is made...
>
> I am pretty firmly convinced that until we stop catering
> to the least
> common denominator, until we stop marginalizing the
> technically and
> scientifically inclined, we will not find many youngsters
> who want to come into our hobby.
>
The fact of the matter is that amateur radio has always been
a rather specialized activity anyway.

I graduated high school in 1972 - the golden age of space
and technology, right?

In my high school of 2500 boys there were at most six licensed
hams. In the girls' school next door there were *none*. 5000
middle class kids in suburban Philly, going to schools where the
emphasis was on math and science, and there were but a handful of

hams. And this was in an era before CC&Rs, cable TV, VCRs, cell phones, PCs, etc.

73 de Jim, N2EY

The most popular highschool technical activity back then was working on cars. A kid with a few tools and skills could get a few dollars together, buy an old heap and get on the road.

What you don't understand is that if toad says it then it's true in his
mind.
Toad can twist the meaning to fit his needs at the time, this is his
idea of freedom of speech. As an example only, toad will read in the
bible that God put plants with seeds on earth for man's consumption,
toad will turn that around to mean, marijuana has seeds so it's ok to
smoke it and the hell with any laws because that's what the toad wants
to do!

The loose screw here, Brain, belongs to you and Lennie.

The two of you load up this NG with tons of mistruthful and
blatantly dishonest and deceitful rhetoric, and then when faced with
even the IDEA that your behaviour might be exposed to those wo DO know
you personally, you go into a tailspin.

Your reactions here pretty much prove to me that your conduct here
does not mirror how you are in "real life", and the idea that your
conduct here might be exposed to family or friends scares the hell out
of you.

So...Why behave one way in here and an other for your family and
friends?

Negative. Their absolute performance is not an issue. I was never
exposed to tube technology, ever. These units are simple, and I will use
them to learn about the hollow state. As long as they work, I will be
well served by them.

It was an interesting report to look at. I would have to say that there
is more to the game than the 2KHz dynamic range, as important as that
is, especially to CW users.

But I do appreciate the info!

Good, thoughtful commentary, Michael.

Part of the problem is the evident posturing of some on these
newsgroups, the self-importance that some generate about
their particular hobby interest. A few become "insulted"
when others talk about a "hobby," yet that is what it is and
that is what it has always been. A hobby, per se, is not
a derogatory label...except to the posturing self-important

individuals who fantasize that they more than they are.

Those who are IN a particular activity are often guilty of tunnel-vision that focusses too much on their own favored interest. Once locked into that "camera setting," they've lost their field of view on a wide panorama.

>The minute you characterize all the young as some monolithic group,
>you are saying you don't know the kids, and if you don't know
>them, then there's no way of bridging that gap. I'm not sure how
>we do it, but I do know that one has to get into their heads to
>reach them.

Heh heh, I've heard the particular lament of "we can't get these (darn) kids to LISTEN to us!" for lots of generations and have read of the same thing in books printed before I existed. :-) It's a VERY common parental angst.

One thing that teachers learn - if they are good at teaching - is to NEVER TALK DOWN to students...not even if one is boiling over inside because they "won't listen." :-) The problem is really in the teacher being unable to properly teach. That applies to ANY subject and ANYONE explaining something. The "teacher" has to address the subject, put the spotlight on it and avoid shining the spotlight on themselves. The subject will be new to the "students" but the "teacher" is familiar.

"Teachers" have to know much more about the subject than their "lesson plan." They have to organize their "teaching" into a comprehensible, learnable flow of ideas and concepts that "students" can mentally digest (difficult but obviously not impossible). Knowing more about the subject than the "plan outline," allows them to field interruptions of some "students" about bits and pieces of the subject that they might have already learned. Such "students" could be lightly disciplined "in class" with something like "that's true, but let's bring that up later after we look at the overall picture (of this subject)." There's lots of similar ways to keep control on "teaching" a subject to a group.

>Keep in mind that decades ago, amateur radio was hardly a mainstreem
>interest among the population. SOme would be interested, many would
>not.

That's true but way too many (in here at least) want to get "insulted" from an apparent "attack" on what they do! :-)

Having spent over a half century IN radio and electronics, having been to many places, being a member of the IEEE for 32 years, my observation (shared with others) is that the "technical people" got INTO technology because it was interesting to them personally...WITHOUT having to go through the licensed amateur radio route. Far more non-

amateurs in professional electronics than those who might have gotten a ham ticket during their teen-age years.

All of electronics can be a technological marvel which is found truly fascinating by thousands upon thousands. That extends much farther than just HF radio in hobbies. Robotics is one huge and growing hobby area right now. "Computing" already has dozens of major hobby groups within it, all made possible by desktop sized computers with enormous capabilities that didn't exist two decades ago.

Devotees of amateur HF "operating" tend to look down their noses at those "other" hobbies, posturing that "they don't have the smarts to do the 'great' things that 'we' did" yet few are able to comprehend that those "other" hobbies require as much or more intellect than theirs.

> There'd be people like you back then characterizing the young
>people, minus the cellphones, basically saying the same thing.

Heh heh heh. True enough. Way too many conveniently neglect the fact that they were young once and "guilty" of the very same faults of their generation.

The technical phenomenon of cellular telephony has put roughly 100 MILLION cell phones into the USA population. [statement of the U.S. Census Bureau over two years ago based on cell phone subscriptions here as one in three of the population] Cell phones (little two-way radios in themselves) are just extensions of a general need to communicate amongst one's peer group...little different from wired telephone use by teenagers a half century ago. Using cell phones as a "hobby" is wrong. Semi-private communications is a social group act, not a hobby.

Those who are too IN to their particular hobby (such as amateur radio) have lost sight of how widespread and pervasive the entire world of "radio" has become. They've lost sight of that other technical phenomenon, the Internet with its ability to reach most of the world without any ionospheric perterbations affecting HF bands. They've become ignorant to the fact that the rest of the "radio" world has gone beyond HF, that HF is NOT the Holy Grail of communications means nor are the very early skills of "radio operating" some kind of ultimate test of "skill."

>Ultimately, little has changed.

True enough. History - as far as some folks' attitudes - DOES repeat itself, again and again. :-)

The paradigms of yesterday just DON'T apply today. Those reasons for being have been crowded out with a cornucopia of NEW, challenging avocations affordable by most. The world and technology has CHANGED. Some people haven't.

The inability to change, to accept change, may be a human survival trait? The "familiar" represents "security." It is known. To be good at something is comforting, reassuring. To individuals. But, the overall "tribe" has accepted change, accepted it, and is enjoying it.

>posting of his.

I got everyone topped. Some weird multiple-personality
type wanted to "stalk" me a few years ago, even left a
couple messages on my answering machine. No problem to me.
Before my wife and I left on a trip up north, I made a
copy of the pertinent messages from the newsgroup and gave
it to a Los Angeles Police Department detective, along
with a request to have the telephone security people
monitor my telephone line. The MPD didn't know that.
The LAPD have a "stalker" unit here and follow-up on such
things after a couple of stalking deaths in this city.

I don't know what the police and security people did,
but the "stalker" on here hasn't been visible since.

>> > A bit paranoid, Brain?

>both a coward and a bully, as bullies usually are.

True enough, demonstrated hundreds of times in here, all
documented on Google.

Stebie doesn't have the documentary evidence, thus he cannot
post any anywhere. He wants to gloss over that fact by going
into the usual Personal Insult statements, calling you names.

>> > > Not my problem.
>> >
>> > Lack of AUTHENTIC documentation is your problem. Put Up or Shut Up.
>>
>> Facts have already been disseminated. You refuse to verify them.
>>
>> This substantiates my claim that Brian P Burke is a coward.
>
>Hi! You must provide authentic documentation of your claims. Until
>then they are just more Robeson nonsense.

There's the possibility that Robeson's psycho-whatever is
such that he really believes he HAS the "documentation"
(of some sort) even though none of it is tangible, visible
to anyone else. That's getting into serious mental
instability.

More probably is that Robeson is just an ordinary bullshitting
bully trying to "make a name for himself" using non-specific
claims and waltzing around providing actual documentation by
misdirection into the Personal Insult statements.

>> > Remember your own words, "No documentation means it never happened."
>>

Good old PCTA Extra Double Standard! Their best
rationale! :-)

"Drawn and quartered!" Stebie is getting better on his
grandiose phraseology...it's almost better than "radio
related evolutions!" Not quite, but up there. His
imagination is on overdrive...

>Now about posting my street number on RRAP. Why did you do that?

"Steve and the boys" are busy sewing together some
white sheets to wear when they erect a burning cross
on your front lawn...chanting "Freedom! ...for bullies
and braggarts!"

Or maybe they rented a DVD by Mel Gibson about the life of
William Wallace? Poor Stebie should have watched ALL of it.
Wallace was drawn and quartered, the five parts buried in
different places. [historical fact] Stebie's documentation
is buried in different places, too, all separated.

My own little children? You lose again as usual wogie, my 'children' are
grown, much wiser and more decent than you can ever hope to be. Who's
whining about you wogie? We don't whine about you, we just laugh about
you, two-test. Laugh about how Riley made you retest for you to keep
your ham license because he caught you red-handed violating the FCC
regulations. We laugh about how you brag about your welfare extra ticket
you got at that license give-away VE session and about how you brag
about that *Restricted* Radio Operator *PERMIT* that you didn't even
have to take a test for, just fill out the FCC form. Worked any DX with
that *PERMIT* lately wogie?
HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA!!!!!!

Dunno. I personally agree somewhat with Brian K's assertion that the absolute number of Hams could indeed drop without serious problems.

On the other hand, I believe that we should have a good mix of ages.

>>There are often many reasons given for this deficiency,
>>and somewhat less "fixes".

Surely. Comparisons between the two show that Amateur radio is a tad bit more involved than buying a computer, doing a dialup and surfing the net. Will a person who's idea of a hobby is clicking a mouse button find Amateur radio a tad intimidating?

Actually, I think you missed my point! My point is that if a person is making a choice of hobbies to get into, the concept of choosing between Amateur radio and using a cell phone just isn't in the mix. I see trendy teens with cell phones glued to their heads every day. I can only assume that they spend hours each day on them. I can guarantee that that kid has never considered amateur radio as a hobby. I doubt they consider their cells as a hobby either. So it is pretty hard to think of that as competition.

I have two cell phones, a few computers, spend a lot of time on the internet in my job and off work, and I cannot explain the seeming exclusivity ascribed to the them as related to my Ham license.

And we've only had a gazillion shows about that kind of stuff.

One show made a start toward a good positive presentation of engineers
and techies. It was Star Trek. The original series had a very kind
treatment of Scottie, the engineer.

Yup. I don't know if you heard about this, but there are some people
who want to bring proposition 19 into the whole of education.

I can see it now, young women being forced to become engineers.....

My basic thesis is that we as a society are moving toward the
celebration of the ordinary, the mundane. We have lost our edge. And
that can only last for so long.

If we can celebrate those who *DO* things instead of simply consume
things, we might reverse that trend.

I agree with that for the most part but I'd like to see your list.

> as important as that
> is, especially to CW users.

Great rcvrs is great rcvrs modes aside. Where did you get the notion
that the guy is excusively a CW op? For all we know he could be a
phone-only op.

> But I do appreciate the info!

Look at it as a mythology, hype and general BS buster. You can lay down
$2,300 for a new MP Mark 5 or pay maybe $500 for a clean used IC-746
and wind up with essentially the same signal handling capabilities and
still have most of the commonly-used bells & whistles.

> Surely. Comparisons between the two show that Amateur radio is a tad
>bit more involved than buying a computer, doing a dialup and surfing the
>net. Will a person who's idea of a hobby is clicking a mouse button find
>Amateur radio a tad intimidating?

Tsk, tsk. Ham speak with forked tongue on inpugning "no
intellect required." A sort of Deus Ex Mousina attitude.

Mike, you were never into computers and BBSs before the
Macintosh mouse debuted, were you? Lots and lots of ALL
ages were BBSing, having a great time without the GUI, well
before Windows, when not on-line they were doing programming,
writing games, "unprotecting" protected disks, experimenting
with the first modem advancements, etc. Budding authors were
practicing writing and established writers were generating
manuscripts with relative ease. Accounting people had
discovered the first spreadsheets and increased the efficiency

of their inventory, financial records, establishing both
schedules and prices of products they were making. ALL
BEFORE the advent of either the computer Mouse or GUI.

To get an HF transceiver in their vehicles, both young and
old could buy a set of transceiver, antenna, microphone for
under $200 from Sears, K-Mart, Wall-Mart, etc. in the
morning and have it installed and working in the afternoon.
Of course that was "CB" and therefore "lowly" and, to some,
"criminal." :-) [all before the GUI and mouse]

I have to admit that putting up one's ham station DOES
take some smarts. One copies an antenna design out of the
ARRL Antenna Handbook, getting somewhat close to the
dimensions. One can copy a whole transceiver design out
of the ARRL Handbook, then rescue themselves by scrapping
the unworking project with a ready-built transceiver bought
at HRO (reviews of performance presented by the "ARRL Lab"
and published in QST). They can even buy coax cable
assemblies when they are unable to put on PL-259s right,
even buy whole antenna kits. I'd say that was "plug and
play" on the same order as PCs, but before Microsith
came out with that marketing/sales phrase. :-)

>> A computer has many uses, from being a glorified typewriter to a
>> serious research/calculation device to gaming to producing all sorts of
>> multimedia stuff.
>
> Don't forget surfing porn. A great way to build character! 8^)

Tsk, Mike. You never saw "dirty pictures" elsewhere (not over a
computer) when you were "building (your own) character?" :-)

>> Most decent white-collar jobs today require computer skills. Many
>> blue-collar jobs also require them.

True enough. There aren't a lot of businesses or
corporations that need "ham radio skills" (even discounting
morse code). Back before the GUI and computer mousies,
push-to-talk two-way radios were common in business large
and small, with public safety organizations, in the military,
and in government. All easy to use...and NOT on amateur
bands nor needing morse code skills.

> Not missing a point. To me, computers are like underwear - pretty much
>gotta have it.

I've not seen any "HANES" computer bramds in stores...

>> Some people live in places where putting up an antenna - *any* antenna
>> - is banned by CC&Rs. A family isn't likely to move so that Junior can
>> put up a G5RV.

Unless either of you have some NEW info courtesy of the U.S. Census Bureau, you will find the MOST residences in the USA do NOT have such restrictions.

> Heh! i had a thought -maybe we could get some of the rebellious types
>to go stealth! 8^)

You haven't heard of MOBILE or even HAND-HELD transceivers?!?

> Actually, I think you missed my point! My point is that if a person is
>making a choice of hobbies to get into, the concept of choosing between
>Amateur radio and using a cell phone just isn't in the mix. I see trendy
>teens with cell phones glued to their heads every day. I can only assume
>that they spend hours each day on them. I can guarantee that that kid
>has never considered amateur radio as a hobby.

How do you present this "guarantee?" In writing? From "long experience" in observation? [remember there are a few of us who've been around longer and seen MORE teeners - even been one once - have MANY DIFFERENT observations of others over the past half century]

> I doubt they consider
>their cells as a hobby either. So it is pretty hard to think of that as
>competition.

Competition for teeners' TIME. They have the same 24 hours a day as adults and infants, the same need to sleep, eat, and do other things (such as attend school).

>> How many TV shows and movies ever depict engineering or
>> technical folks at all, compared to other fields like health
>> care or law enforcement?

TV shows and Movies are for ENTERTAINMENT of enough customers that will pay the Producers of same...and artists. Entertainment shows go for the Emotions of the audience.

> One show made a start toward a good positive presentation of engineers
>and techies. It was Star Trek. The original series had a very kind
>treatment of Scottie, the engineer.

...who ran the works of a SPACESHIP (circa 1967) as thunk up by MOVIE people, the Producers, the Writers, the scenery and prop designers. NOT "techie" insofar as our then-present society was. EMOTION stuff, NOT education.

>> I graduated high school in 1972 - the golden age of space
>> and technology, right?
>
> Well, pretty close to the end of it....

NOT EVEN CLOSE. Having been IN the "space business" since 1964 and working for the manufacturer of the Space Shuttle

Main Engine (as well as the Apollo first-stage engine), you
both missed the Space Shuttle program and well over a
hundred STS missions. You've MISSED the unmanned vehicle
missions and negated the tremendous data gathered by the
Mars rovers and the trips to the outer edges of our solar
system. You two have completely ignored when the "personal
computer" made its debuts beginning in the mid-1970s, and
suddenly skyrocketing after 1980. You've missed the first
computer networking of BBSs that began in the late 1970s
or have recognized the Internet phenomenon happening after
it went public in 1991. Perhaps you've both become too
blase' about computers and the Internet?

>My basic thesis is that we as a society are moving toward the
>celebration of the ordinary, the mundane. We have lost our edge. And
>that can only last for so long.

Tsk, your own middle-age angst is mumbling. :-)

I've heard the SAME sort of complaint by others about their
generations' folly for about six decades. :-)

> If we can celebrate those who *DO* things instead of simply consume
>things, we might reverse that trend.

That has been going on in nearly all technological endeavors
for as long as I can remember. The DO-ers are celebrated.
A survey of the IEEE Milestone history program in electronics
demonstrates that, a program that is shared with other
technological associations. The birth of the first "hard
drive" has been Milestoned recently...IBM's RAMAC and the
Model 350 disk storage system (1956) out of a small IBM
lab in Silicon Valley.

But, to be celebrated, you MUST do something that others
consider more remarkable than average. Your own personal
accomplishment is NOT enough. One isn't a DO-er just by
making something and showing it on the Internet to a wide
ranging viewing audience, then proclaiming its "greatness."
Neither is one a DO-er by explaining what they "will" do
and expecting plaudits BEFORE they've ever done anything.

>I was assigned to a couple signal units in my Army days. Thats right
>Lennie, I have BOTH Air Force and Army time. And if it matters, I was in
>signal/commo operations/maintenance all the way.

Doing WHAT? Explain. All military units have personnel to
cook, maintain supply rooms, clerks to handle administrative
tasks, and so forth. Being "in" a Signal unit is NO guarantee
that you were a techie type. I've explained precisely what
I did a long time ago, have the pictures, have them posted,
have the data verified with others (including a civilian
engineer employed by both Army and Air Force).

>But you don't see me "living in my past" as you seem to do.

Poor guy. Knowing history isn't "living in the past."

Being able to trace the lineage of a particular military unit
is more like genaology. The U.S. Army's Center for Military
History has much on that. Considerable information on the
ten years of the Vietnam War.

Some people LIKE seeing the growth/change/reformation of
the U.S. military as well as the growth of radio-electronics
technology...especially those who were IN the electronics
industry and actually designing and building such electronics
as I was.

>Although I do admit to some problems with startle response and
>bad dreams from time to time. But I don't care to, nor NEED to
>elaborate on that either.

No one was asking you to elaborate on personal problems or
in adjustment to civilian life.

>I really do feel sorry for you Lennie.

No, you do NOT. You are ANGRY. You are lashing out at
others for some personal reason.

>Perhaps you should just take a break
>and get a grip on what's left of your life.

I have nice luggage, thanks to Samsonite. I don't have a
grip and I've never had the grippe. I am retired, have a
comfortable income, a wonderful wife (also retired), no debts,
and a lot of experience in radio-electronics accumulated over

more than a half century. I've NEVER claimed to be any sort
of "war hero" and the highest "medal" I've gotten is a Good
Conduct Ribbon. :-)

I came into this newsgroup years ago to argue against the
retention of the morse code test for any radio operator
license. Since then I've been subjected to all sorts of
personal insults, had to endure insults directed at my
family, my wife, my ancestry, my intelligence, my patriotism,
and many more things...all having NOTHING to do with any
argument for or against morse code testing. I mention my
own three years of HF communications operating to explain
that large-scale military communications means did NOT use
morse code from prior to 1953. [actually since 1948] That's
HISTORY in the larger world of radio communications,
documented elsewhere...although neglected by the "historians"
at the ARRL. It's not even classified any more, is all for
public dissemination. [very little of it was Classified in
any way]

>Veteran USAF, 1964 to 1968
>Veteran USArmy, 1971 to 1979
>
>(and to save you the trouble of asking why I didn't go for 20).....I am 100%
>service connected with the VA for injuries received in Vietnam).

I'll have to be blunt here:

1. I've never asked "why you didn't go for 20." I don't care
one way or the other.

2. I've been doing computer-modem communications for 20 years
and have seen both the truthful and outright liars, met
people of both kinds. It's extremely EASY to LIE on this
medium...and to find that LIARS can be hateful, vengeful
sorts when they cannot dupe anyone into believing them.

3. The Vietnam War ENDED in May, 1975. The only U.S.
military there are some investigators looking for
remains of U.S. personnel. [you claim Army service
to 1979...which was 26 years ago]

4. The Korean War has NOT ENDED since it began 55 years
ago. There are still U.S. forces stationed in South
Korea and DO still patrol the DMZ today. It's rare
now, but armed skirmishes have happened during the
52 years of the official "Truce" begun in July 1953.

5. You have NOT explained your "injuries" received in
Vietnam. Accidents happen to military personnel whether
or not they are involved in any "hostile actions."
That is NOT germane to any discussion of amateur radio
policy.

6. Are we to take "your word" verbatim? You do not take mine (indeed, no PCTA wants to take the word of an NCTA). Do you have documentary proof of your injuries or disabilities? All the veterans I've visited at the Van Nuys VA hospital have had one form or another of such documentation (some had NOT been in battle) and disablement was obvious to the naked eye. In THIS medium there is only words on a screen, not even a real proof that a particular screen name is what they say they are.

7. Are you looking for self-promotion or for self-recognition or to garner sympathy and understanding, perhaps respect and worship? the Internet newsgroups are NOT such venues. Hire a good PR person and a web page designer for that, use a private website.

8. Internet newsgroups are NOT good places to start a HATE group. At best you can ignite a Flame War, but that will eventually die out from ennui...or have the provider just close down the group. [that has happened in here] If you really want to HATE someone, then take out a private web page and vent your spleen there. That does not give you any protection since you will then be open to Civil Court action for Libel. You could lose every bit of money you have (except federal disability monies) on losing a Civil Court Libel suit.

9. I'm not a patsy for some sob story. I've seen too many con-jobs tried on myself and others...and that includes a few of the veterans at that Van Nuys VA hospital! Some don't know when to quit even when they are under daily observation. Neither am I bothered by raging hatred or "threats" against me levelled by some "outraged" person. Don't forget I've done computer-modem comms for a long time and seen wayyyy too many examples.

>There you are Lennie, putz, take a shot.

No problem. 9 batteries in a Time-On-Target. Hope you enjoyed the concussions. There are more batteries standing by for another "Fire Mission." Your choice.

We can FIGHT in words or actually discuss a SUBJECT. Again, your choice. I can meet either one.

I guess you were too busy whipping up a snappy retort that you
missed the "operations/maintenance" line, Lennie.

> Poor guy. Knowing history isn't "living in the past."

Retelling it over and over and over and over and over is.....

> Being able to trace the lineage of a particular military unit
> is more like genaology.

But in your case, it's an opportunity to make claims to honors you
didn't earn.

Putz.

> >I really do feel sorry for you Lennie.
>
> No, you do NOT. You are ANGRY. You are lashing out at
> others for some personal reason.

He's not expressed ANY anger...

And we DO feel sorry for you, Lennie.

After all, here you are, nearing end of life, and doing nothing
but arguing, fighting and calling people names. Haven't accomplished a
single solitary notable thing.

> >Perhaps you should just take a break
> >and get a grip on what's left of your life.
>
> I have nice luggage, thanks to Samsonite. I don't have a

Finally...a ray of hope...Lennie admits he doesn't have a
grip...we've known it for years, of course.

> I've NEVER claimed to be any sort
> of "war hero" .....(SNIP)

No...you just try to make it APPEAR as though you served as a "war
hero"...By standing on the sacrifices that others made. No doubt that
"comfortable retirement" you make reference was made on the
accomplishments of others too.

> I came into this newsgroup years ago to argue against the

Gee, Lennie...

If you don't like it, imagine what WE thought when you threw it our
way first.

> all having NOTHING to do with any argument for or against morse code > testing.

Guess YOU should have stayed on topic from the git-go, Lennie...

> I mention my
> own three years of HF communications operating to explain
> that large-scale military communications means did NOT use
> morse code from prior to 1953.

YOU did NOT have "three years of HF communications operating"...

YOU were a radio mechanic.

Yes, You occassionally keyed a transmitter in the course of doing
maintenance...That no more makes you an "operator" any more than my
doing maintenance on a CH53 made me a helo pilot.

> >Veteran USAF, 1964 to 1968

Why do you suggest he go elsewhere to do what you've been doing
all along right here?

Scared of some competition?

> 9. I'm not a patsy for some sob story. I've seen too many
> con-jobs tried on myself and others...and that includes a

> time and seen wayyyy too many examples.

Whoa! Lennie!

There you go dissing Veterans again....even disabled vets in a
hospital!

Does your scumminess know no bounds?

You are the progentiator of many-a-sob story, and would dare to
label us "pastsy" for your pleasures.

I am proud to say taht many of us don't take your silliness.

> >There you are Lennie, putz, take a shot.
>
> No problem. 9 batteries in a Time-On-Target. Hope you enjoyed

And you'd love it.

You couldn't stand to be civil for more than one round. It's just
not in you.

> We can FIGHT in words or actually discuss a SUBJECT. Again,
> your choice. I can meet either one.

Let's discuss how to get you into a VE session and actually get
some PRACTICAL EXPERIENCE in Amateur Radio practice and policy. Then
you MIGHT start to have something to talk about.

Until then, please be so kind as to wipe off the window where
you've had your snout pushed up against it looking in....

It's happening already.

The important number is how many *active* hams there are.

> On the other hand, I believe that we should have a good
> mix of ages.

Sure - but how much is enough? If, say, 10% of the US amateur
population were under the age of 21, would that be enough?

How would it compare to the way things were 10, 20, 30 years ago?

Looking around at hamfests and club meetings isn't necessarily
a representative sample of the ham population.

> >>There are often many reasons given for this deficiency,
> >>and somewhat less "fixes".

One thing is for sure: Adding an age requirement, as proposed
to FCC by one frequent poster here, isn't a fix nor a good
idea.

> teens with cell phones glued to their heads every day.
> I can only assume
> that they spend hours each day on them.

Maybe - but kids spending lots of time on the 'phone isn't
a new thing at all. Goes back to the '50s at least.

> I can guarantee that that kid
> has never considered amateur radio as a hobby.
> I doubt they consider
> their cells as a hobby either.

Means to an end, not an end in itself.

> So it is pretty hard to think of that as competition.

Here's how:

Back before cell phones, one "selling point" for ham radio
was something like "if you and your friends got ham licenses,
you could talk all you want without tying up the 'phone."
Another was that repeaters extended the range of an HT, mobile
or compromise home station enormously.

Of course that's a "means to an end" application - the goal is
talking to the friends, the radio part is simply how it's done.

20 years ago such a "sales pitch" made sense. Today, in most
places, the response would be to simply get a cell phone.
>
> I have two cell phones, a few computers, spend a lot of

> exclusivity ascribed to the them as related to my Ham license.

Time spent on them is not time on the air.

The portrayal of the engineer as a Scot is a classic stereotype. Goes
back to "MacAndrew's Hymn" at least.

> >>How about the smart woman who takes off her glasses

There's a big difference between equality of opportunity and
equality of result.

Look what happened to the guy at Harvard...

Sure they are - as long as we play by *their* rules.

Part of the problem goes back decades, to when the USA decided
that certain sectors of manufacturing could be dominated by
imports.
>

I think it's the opposite - we don't celebrate the "ordinary"
enough!

Suppose - just suppose - that instead of going to the moon on
a "before this decade is out" timeline, the USA had devoted
some of those resources to developing energy

independence. Energy crisis? what energy crisis?
>
> If we can celebrate those who *DO* things instead of simply

You mean "produce things". The people who are celebrities today
are all doers - movie stars, sports figures, etc.

I thought of today and what it means and came across this article.

Here's a bit from the Seattle Times of May 30, 2005, from Nancy Bartley, staff reporter:

Florence Abrahamson was only 15 when she went to war for the first time.

She was a married mother of three, with a son in the Navy, when duty called again more than 20 years later.

Now 102, Abrahamson is being honored by legislators, officials in her hometown of Aberdeen, and by Seattle's Museum of Flight as one of a number of "Rosie the Riveters" who worked on Boeing and de Havilland airplane assembly lines during wartime.

Abrahamson, however, is among the rarest of them all: She is the Northwest's last surviving "Rosie" from two world wars - and perhaps the only one anywhere, Museum of Flight officials believe.

An upcoming trip to Seattle for the recognition ceremony and a tour of Boeing, all part of the museum's week of Memorial Day events, have significance for Abrahamson: For the first time, she will actually see a finished version of the B-17 bomber she worked on during World War II.

For the Aberdeen woman, whose blue eyes loom large behind her spectacles, it's all much ado about what, to her, was "just duty" and "what anyone would have done."

"Here is a gal who worked in two world wars," said Polson Museum Director John Larson. The rarity of that "just blew us away."

The museum selected Abrahamson as this year's "Pioneer of the Year" for her contributions to the community and for her long history in the Grays Harbor area. Abrahamson's work life began shortly after her father died, which left her mother a widow with five children to support. Abrahamson and her brother were the two eldest.

In 1917, at the beginning of America's entrance into "The Great War," the Grays Harbor Commercial Co. in Cosmopolis, one of the first sawmills in the harbor and located where the Weyerhaeuser pulp mill is now, needed help manufacturing de Havilland warplanes. While Abrahamson's brother was readily accepted, the company was torn over whether to hire women.

When Abrahamson was hired in 1918, she dressed in overalls - daring attire at a time when proper ladies wore long skirts - and walked to work at the factory every morning from the family home less than a mile away.

She spent her days making spruce lath for the de Havilland DH-4 biplane, the only U.S.-built warplane to see World War I combat. Her life was regulated by the steam plant's whistle, which signaled the start of work, lunch and end of the day.

World War I was different from the war that followed, she said.

Although Grays Harbor citizens - including her husband-to-be, Hugo Abrahamson - served in the military, the fighting in Europe seemed more remote than that of World War II.

After the 1941 attack on Pearl Harbor, Aberdeen citizens shaded their windows at night. The Boeing Aberdeen factory was camouflaged with trees on the roof. Japanese submarines lurked off the coast. And American warplanes patrolled the harbor.

By then, Florence and Hugo were married and living in house they built in 1925. He was working at a mill, and she was employed at a small grocery when the new war effort called.

She tied a red bandana over her hair, donned a pair of slacks and became a riveter, fastening the aluminum skin onto B-17s. But as she placed rivet after rivet, she always wondered what the final plane looked like, with all those carefully laid rivets stitching the aluminum together as precisely as if she had been cross-stitching a sampler.

She was so fast that co-workers asked her if she was "trying to win the war all by yourself." And she proved herself so capable - despite being left-handed in an occupation set up to accommodate only the right-handed - that she became an inspector, checking the work of others. Later, she would help make components for more than 5,000 B-29s.

Now, Abrahamson's day of discovery is closing in.

"The important title being bestowed on you must fill your heart with fond memories and a warm sense of pride for your enormous wartime contributions," state Rep. Gigi Talcott, R-Tacoma, wrote to her. Her efforts are "appreciated by every American who has experienced liberty and freedom."

Thursday, Abrahamson will join a number of other Rosie the Riveters as guests of the Museum of Flight. Sporting her Boeing security badge from World War II, she will be accompanied by four of her six grandchildren for a tour of Boeing and the museum's B-17G "Fuddy Duddy."

Abrahamson's husband died in 1974 and the last of her three children in 2004, but she is adored by her surviving grandchildren and six great-grandchildren. All have heard her colorful stories: Her assembly-line days; the ordeal of taking a driver's test for the first time at 57, after her son taught her to drive in a Pontiac so large she nicknamed it "the beast." After failing once, she passed the test on her second try but slammed the cranky license examiner against the dash when she braked too hard.

"I wake up at night thinking about it even after all these years," she said.

And no one will forget her arrest - sometime past the age of 60 - for a fishing violation.

"I was caught fishing in a fish hatchery," she admitted sheepishly. Fishermen friends kept advising her to go farther up the Satsop River. "How was I to know it was part of the hatchery?"

Afterward, when she showed up at church, the congregation "sang the prisoner's song" when she walked in, she recalled. And there was a fund drive at some stores to help her pay her fine. The judge ultimately dismissed the charge as long as she promised to "fish somewhere else."

She figured that was good advice and went to Westport, Grays Harbor County, where she then won a 1964 fishing derby with a 48-pound salmon.

She smiles in satisfaction at the thought. Just like she does when she thinks of those days during the war when she could fasten a rivet quick as anything.

I am the American Sailor

Author unknown

Hear my voice, America! Though I speak through the mist of 200 years, my shout for freedom will echo through liberty's halls for many centuries to come. Hear me speak, for my words are of truth and justice, and the rights of man. For those ideals I have spilled my blood upon the world's troubled waters. Listen well, for my time is eternal - yours is but a moment.

I am the spirit of heroes past and future. I am the American Sailor. I was born upon the icy shores at Plymouth, rocked upon the waves of the Atlantic, and nursed in the wilderness of Virginia. I cut my teeth on New England codfish, and I was clothed in southern cotton. I built muscle at the halyards of New Bedford whalers, and I gained my sea legs high atop mizzen of Yankee clipper ships.

Yes, I am the American Sailor, one of the greatest seamen the world has ever known. The sea is my home and my words are tempered by the sound of paddle wheels on the Mississippi and the song of whales off Greenland's barren shore. My eyes have grown dim from the glare of sunshine on blue water, and my heart is full of star-strewn nights under the Southern Cross.
My hands are raw from winter storms while sailing down round the Horn, and they are blistered from the heat of cannon broadside while defending our nation. I am the American Sailor, and I have seen the sunset of a thousand distant, lonely lands. I am the American Sailor. It was I who stood tall beside John Paul Jones as he shouted, "I have not yet begun to fight!" I fought upon the Lake Erie with Perry, and I rode with Stephen Decatur into Tripoli harbor to burn Philadelphia.

I met Guerriere aboard Constitution, and I was lashed to the mast with Admiral Farragut at Mobile Bay. I have heard the clang of Confederate shot against the sides of Monitor. I have suffered the cold with Peary at the North Pole, and I responded when Dewey said, "You may fire when ready Gridley," at Manila Bay. It was I who transported supplies through submarine infested waters when our soldier's were called "over there." I was there as Admiral Byrd crossed the South Pole. It was I who went down with the Arizona at Pearl Harbor, who supported our troops at Inchon, and patrolled dark deadly waters of the Mekong Delta.

I am the American Sailor and I wear many faces. I am a pilot soaring across God's blue canopy and I am a Seabee atop a dusty bulldozer in the South Pacific. I am a corpsman nursing the wounded in the jungle, and I am a torpedoman in the Nautilus deep beneath the North Pole. I am hard and I am strong.

But it was my eyes that filled with tears when my brother went down with the Thresher, and it was my heart that rejoiced when Commander Shepherd rocketed

into orbit above the earth. It was I who languished in a Viet Cong prison camp, and it was I who walked upon the moon. It was I who saved the Stark and the Samuel B. Roberts in the mine infested waters of the Persian Gulf. It was I who pulled my brothers from the smoke filled compartments of the Bonefish and wept when my shipmates died on the Iowa and White Plains and Cole. When called again, I was there, on the tip of the spear for Operations Desert Shield and Desert Storm.

I am the American Sailor. I am woman, I am man, I am white and black, yellow, red and brown. I am Jew, Muslim, Christian and Buddhist. I am Irish, Filipino, African, French, Chinese, and Indian. And my standard is the outstretched hand of Liberty. Today, I serve around the world, on land, in air, on and under the sea. I serve proudly, at peace once again, but with the fervent prayer that I need not be called again.

Tell your children of me. Tell them of my sacrifice, and how my spirit soars above their country. I have spread the mantle of my nation over the ocean and I will guard her forever. I am her heritage and yours.

I am the American Sailor

No BS.

No anger (on my part, anyway).

And no hatred...again on "my part"...

I comprehend that just fine, Lennie.

It has NOTHING to do with Lennie Anderson, ADA, Amateur Radio, or
much of anything else except that it was a tragic loss of American
lives.

You were still in the States. You were a civilian.

> I was assigned to the 71st Signal Service Battalion, 8235th AU,
> in February, 1953. Stebie, once again in his angry hatred,
> wants to twist that into "cowardice" and "disgrace" and
> "dishonor" on my part because I display a sense of pride in
> what MY unit did...and continued to do long afterwards.

What you have DONE, you miserable lying coward, is try to use
those sacrifices on several different occassions, this past week being
example, for your own personal glorification...NOT to "honor" those who
died in service to their Nation.

> Three members of the 8235th AU (then renamed Far East Command Signal
> Service Battalion) would die in three separate actions while
> on TDY (Temporary Duty assignment) in Korea...AFTER the "Truce"
> had begun in July, 1953. That "Truce" continues to this day,
> the Korean War is NOT OVER. From time to time, armed skirmishes
> happen along the Demilitarized Zone, combat on a small scale.

But YOU were not even in-theater, Lennie. Not a single bit of
that event is pertinent to ANYthing you ever did in the Army...Not a
thing...

You've not been TO Korea, then or since. Civilian OR Army.

> Stebie's "validation" of HIS "combat" is a very UN-detailed,
> Ambiguous mention of "participation in seven hostile actions."
> The WHEN and WHERE of those "seven hostile actions" has NOT
> been stated. Stebie REFUSES to state the WHEN and WHERE.

And it will stay that way. Those who have asked me privately have
been told...I volunteered the information to two others and they have
had it within their discretion to follow-up on it as they saw fit.

You, on the other hand, will not be told by me. You've proven and
re-proven your complete lack of honesty, character and dependability.
You try to make a mockery of anything and everything anyone and
everyone has ever mentioned in this forum...Except for brain, of
course, but he's just as disgustingly dishonest as you are.

> One can only assume that Stebie is just a damn LIAR, bluffing
> in an effort to be more "manly, macho" in his mumblings about
> his own "combat experiences."

Nope.

> >> Of course they died three years before he was even inducted into
> >> the Army...Pretty disgusting behaviour for a guy who claims to "honor"
> >> war dead.
> >
> >Nobody in the U.S. Marine Corps died before you were inducted?

> Absolutely NONE before his induction...they must "live forever"
> according to Stebie..."in his heart."

Sure they did.

I just don't deem it appropriate to discuss them in such a way so
as to make it appear as though I was somehow associated with their
sacrifices. I wasn't.

YOU, on the other hand, Lennie, seem to think that you were part
and parcel of those events.

You weren't.

> It would be interesting to see the Last Action Hero spout off
> about "dishonor" at any Retreat Ceremony, a Funeral of a non-
> marine, any Memorial Day gathering to honor the fallen.

"Marine" is capitalized.

And Lennie, I've carried the colors at more retreat ceremonies, funerals, honors parades and other events than you can even begin to imagine...Soldiers...Sailors...Airmen, and yes...Marines...Even a couple of CAP members along the way....

> It would
> be a given that this Last Action Hero (of "seven hostile actions")
> would not survive that day...nor would anyone around him be
> arrested by REAL authorities. We would then see that this
> great "patriot" (of the United Stevies of America) was nothing
> more than a bluffing bully, tosser of ####, big loudmouth, and
> a representative of modern-day U.S. Amateur Radio behavior.

Ahhhhhhhhhhh...Out with the profanities again, Lennie...

And swaddled in the middle of lies and bluffs of your own. REAL bluffs.

> A problem is that the bluffing bully, big loudmouth, tosser
> of #####, and lying story-teller just hasn't let up. He keeps
> on LYING, manufacturing things about others that never
> happened to them, manufacturing glory about himself that he
> cannot PROVE.

I never claimed any "glory", Lennie.

I was a U. S. Marine. I had a job to do, and I did it...

As for the teller of tales and the tosser of, well, stuff...we have YOU to thank for that...

> Is that what the HOBBY of U.S. amateur radio has become?

How would YOU know, Lennie...?!?! You're not a licensed Amateur. You don't even subscribe to any of the journals. If you did, you MIGHT be a bit better informed on many issues on which you deem fit to comment but obviously aren't prepared to do.

> I hope not...yet the evidence appears almost daily in here.

The evidence leads me to believe that I'd rather have a daughter in a cat house than a son in the IEEE.

> ex-RA16408336, USA, 1952-1960, Signal Corps, Sgt (E-5)
> HONORABLE Discharge

"HONORABLE" discharge in 1960.

Discredited liar and deceiver in 2005.

What a putz.

What "dire fate" would befall ham radio if there wasn't a single licensee under 21? What do they actaully bring to hobby which is so important?? Sorry, makes no sense, I just don't get it.

If it's a numbers game why not shift gears and recruit retirees instead of chasing kids? The retirees are far more independent than kids, they're more mature, on average they don't care about nonsense like instant gratification and peer pressure and they have the time the kids don't have. And in most cases they also have the money the kids don't have.

You've done nothing of the sort, Brain.

You continue to lie.

You continue to be deceitful.

Nothing's changed.

> and then when faced with
> > even the IDEA that your behaviour might be exposed to those wo DO know
> > you personally, you go into a tailspin.

But be my guest, Brain.

I assume you know my wife's callsign, ergo you know her name and
the address, which is of course the same.

Go ahead...drop her a line.

See what happens.

> > Your reactions here pretty much prove to me that your conduct here

What's "unnatural"...???

You claimed you were telling your son "what a creep" I was. I
have the right to rebut that.

> > I'd be interested in your suggestions as to what Postal Service
> > regulations might be violated there, Brain...
> >
> Stalking.

No stalking involved, Brain.

> You've been told not to send me e-mail, US mail, FEDEX or UPS.
> Nothing. Stay away, creep.

Don't like the idea that some of YOUR posts in RRAP may show up on
the doorstep, Brain...?!?!

Then stop making stupid, deceitful and dishonest psots.

And if you want to avoid the confrontation altogehter, just excuse
yourself from any further participation in RRAP.

It's not "stalking" when YOU intentionally get in the alleged
'stalkers' face, "Brain"...

Sheeeeesh....

Well, Brain...Today being the day it is and your posts being what
they are, you've proven once and for all that "stupid" doesn't take
holidays.

Here's kind of another take on that poem: I like both of them:

"Hear my voice, America! Though I speak through the mist of 200 years, my shout for freedom will echo through liberty's halls for many centuries to come. Hear me speak, for my words are of truth and justice, and the rights of man. For those ideals I have spilled my blood upon the worlds troubled waters. Listen well, for my time is eternal -- yours is but a moment. I am the spirit of heroes past and future.
I am the American Sailor. I was born upon the icy shores at Plymouth, rocked upon the waves of the Atlantic, and nursed in the wilderness of Virginia. I cut my teeth on New England codfish, and I was clothed in southern cotton. I built muscle at the halyards of New Bedford whalers, and I gained my sea legs high atop the mizzenmasts of Yankee clipper ships.

Yes, I am the American Sailor, one of the greatest seamen the world has ever known. The sea is my home and my words are tempered by the sound of paddle wheels on the Mississippi and the song of whales off Greenland's barren shore. My eyes have grown dim from the glare of sunshine on blue water, and my heart is full of star-strewn nights under the Southern Cross. My hands are raw from winter storms while sailing down round the Horn, and they are blistered from the heat of cannon broadside while defending our nation.

I am the American Sailor, and I have seen the sunset of a thousand distant, lonely lands. I am the American Sailor. It was I who stood tall beside John Paul Jones as he shouted, "I have not yet begun to fight!" I fought upon the Lake Erie with Perry, and I rode with Stephen Decatur into Tripoli Harbor to burn Philadelphia. I met Guerriere aboard Constitution, and I was lashed to the mast with Admiral Farragut at Mobile Bay. I have heard the clang of Confederate shot against the sides of Monitor. I have suffered the cold with Peary at the North Pole, and I responded when Dewey said, "You may fire when ready Gridley," at Manila Bay. It was I who transported supplies through sub marine infested waters when our soldier's were called "over there."

I was there as Admiral Byrd crossed the South Pole. It was I who went down with the Arizona at Pearl Harbor, who supported our troops at Inchon, and patrolled dark deadly waters of the Mekong Delta.

I am the American Sailor and I wear many faces. I am a pilot soaring across God's blue canopy and I am a Seabee atop a dusty bulldozer in the South Pacific. I am a corpsman nursing the wounded in the jungle, and I am a Torpedoman in the Nautilus deep beneath the North Pole. I am hard and I am strong. But it was my eyes that filled with tears when my brother went down with the Thresher, and it was my heart that rejoiced when Commander Shepherd rocketed into orbit above the earth. It was I who languished in a Viet Cong prison camp, and it was I who walked upon the moon. It was I who saved the

Stark and the Samuel B. Roberts in the mine-infested waters of the Persian Gulf. It was I who pulled my brothers from the smoke-filled compartments of the Bonefish and wept when my shipmates died on the Iowa and White Plains. When called again, I was there, on the tip of the spear for Operations Desert Shield and Desert Storm.

I am the American Sailor. I am white and black, yellow, red and brown. I am Christian, Jew, Muslim and Buddhist. I am Irish, Filipino, African, French, Chinese, and Indian. And my standard is the outstretched hand of Liberty. Today, I serve around the world; on land, in air, on and under the sea. I serve proudly, at peace once again, but with the fervent prayer that I need not be called again. Tell your children of me. Tell them of my sacrifice, and how my spirit soars above their country. I have spread the mantle of my nation over the ocean, and I will guard her forever. I am her heritage and yours."

For me, Memorial Day is more than honoring those who have died. Death comes naturally for a soldier (I've heard that somewhere and it's something that really made an impression upon me). But, everyone who ever had anything to do with creating war, going to support it's efforts, staying home to support it's efforts (as in the case of the article from the Seattle Times), all kinds of heroes: sung and unsung, they all deserve our moment of pause and recognition--MORE than on days like today.

But, days like today give us all a collective moment or two to recognize the magnitude of sacrifice that those people made--whether on the shores of war or in the cities of our nation to keep her engines moving and take care of our soldiers and their families and, if you'll think about it, to give those soldiers something to come home to, even.

'Nuff said...

Kelly,

I think we're batting our gums over nothing. The original post, in my mind, hit the nail on the head. Technical folks seem to be almost unwanted in the United States. One reason for amateur radio (at least in the past) was to attract the technically oriented and hopefully some would persue their interest and become engineers.

Engineers don't make tons of money these days. Skilled trades folks are almost unwanted. I had to laugh, there were ads for toolmakers (a number of years minimum experience) that ran $10.00 to $12.00 per hour. I just saw an ad for a parking lot attendent at $11.00 per hour. Of course, the requirements for that job were tough. Almost as tough as amateur radio requirements. Not only did you need a high school diploma (or ged, or equivalent experience), you had to be able to make change without the use of a computer or calculator!

Meanwhile, Russia launches Direct TVs latest hi-definition satellite, China does the manufacturing.

As to your suggestion about putting a minimum age limit for amateurs, raising it enough (say to 55) would ensure that mostly appliance operators apply.

Sorry, I can't agree on an age limit for amateurs (although I understand what you mean about the numbers game - therefor the suggestion). Meanwhile, we have to get rid of manufacturing and perhaps teachers too. We have more important stuff to deal with, such as the weapons of mass destruction.

It's amazing how hard those suckers are to find! So far about 1,600 of our
youth have died looking for those pesky things.

Just when the military cemeteries were filling mostly with old retired warriors,
it looks like Memorial Day is getting a new lease on life.

I've often suggested recruiting people in the 40 to 50 year old range.
Their kids are grown or nearly so. They have a better income than when they
were younger and a little more free time than when they were younger. And
they are still young enough to have energy and enthusiasm for new
activities.

Personally I try to encourage everyone of all ages who shows even a hint of
interest.

Hello, Phil

A good effort, but your post has a couple of minor problems despite not having any errors. You use the word "licensee"; I have serious doubts if most of the flame-fest types understand that term. Besides, a lot of folks will interpret the rules the way they see fit. I'd love to see someone try to explain to a judge what the law states. Oh, I'd *love* to be in that courtroom.

I hope any such individual has deep pockets, not to mention some spare time ;)

But I have. And I can barely stand myself while I do it. Much like
you must not be able to stand yourself. Please get help.

> You continue to lie.
>
> You continue to be deceitful.
>
> Nothing's changed.

You should see lots of yourself in my postings; lots of new thread
headings, lots of accusations of liar, demanding all sorts of things.
Your words, your rules, your logic. Hi!

But I won't stoop to calling you a gay man. That would insult gay men
everywhere. And I won't be demanding equal time with your children or
wife as you have done with mine. That's much too creepy for me.

> > and then when faced with
> > > even the IDEA that your behaviour might be exposed to those wo DO know
> > > you personally, you go into a tailspin.
> >
> > No one here is asking for "equal time" with your children, your wife.
>

> But be my guest, Brain.

I have no interest in your children or your wife. The problem is your
interest in other people's children and wives. Mine in particular, but
you have made the same comments about other's families.

> I assume you know my wife's callsign, ergo you know her name and
> the address, which is of course the same.
>

Hi!

> I think my patience and persistence in dealing with your incessant
> lying and deceit has been adequate and appropriate.

Look inward, silly gunny.

> > So why have you posted my streed number on RRAP? What explanation
> > could be beleived other than a lame attempt at intimidation?
>
> Waht 'intimidation', Brain...???

So why have you posted my street number on RRAP?

You have yet to explain your actions.

> Oh...you mean the idea that your family might find out what a
> deciteful little troll you are in public is "intimidat(ing)"...?!?!
>
> THEN STOP DOING IT!

Do I intimidate you? It isn't my intention. I just want to know why
you have made frequent mention of needing to get to my family and have
posted my house number on RRAP. So, why?

In any event, I suggest that you stop.

> > And your MARS documentation....
> >

> > Got any?
>
> Gave you the information. Got the guts to ask the right people the
> right questions?

Steve, you are the right person. You said in another post that Len was lying when he said that you didn't have authentic documentation. The flip-side of your accusation is that you actually do have the proper documentation, so you really are the right person to ask. Post it if you really do have it. Got papers?

> Thought not.....

Thought not, indeed.

And your "drawn and quartered" remark, have you been playing with sharps again?

Hello, Dee

You are one who is an asset to amateur radio. One who doesn't quibble over someone's age, gender, or background (heaven help us if it is a cber wanting to get in LOL).

Go tell 'em, gal!

The best of 73s from Rochester, NY (someone will gripe about a plural here LOL)
Jim

ps - I consider the best of 73s to be a singular collective and think Dee deserves a big *thanks* for encouraging anyone and everyone!
:)

pps - anyone who thinks not, just be my guest and ZBM-2

:))

Whole bunch of things:

1) Youth is the future

2) One of the Basis and Purposes of the ARS is education - which includes things like educating youth. Even if a young ham does not become an engineer or technical type, the technical background of ham radio is a good thing to have.

3) The ARS has the image of an "old white guy's hobby" in some circles. While that's not an accurate picture, losing younger hams isn't going to help things

4) Young folks have a lot to offer the ARS.

> If it's a numbers game why not shift gears and recruit retirees > instead of chasing kids?

That's been going on for a couple decades now. Look at the folks we did FD with a few years ago - most of the older folks in that crowd were licensed after age 55.

The thing to do is what Dee says - recruit anyone with an interest.

> The retirees are far more independent than kids,

Very true.

> they're more mature,

HAH! Look at the FCC enforcement letters - you don't see many young people being cited for serious operating violations.

There was a guy in Florida named Flippo or some such, and now
Gerritsen in LA. They have no counterparts in the younger
crowd.

Or you can look at the behavior of one "retired from
regular hours" frequent poster here....Maturity?

> on average they don't care about nonsense like
> instant gratification and peer pressure
> and they have the time the kids
> don't have. And in most cases they also have the money the kids > don't have.

Those I'll agree with.

I don't have job, because I'm too busy with school. So Cornwhore, I
don't have the time for a job. As for paying the bills, I've done my
share for paying the bills. As for living of mommy and daddy, I've made
my money in stocks that I don't have to worry.

>Steve, K4YZ

No, Steve you and the other morons on here are the clueless ones,
because you and the others one here can't understand that

1. No where in the FCC rules does it state that an Information
Bulletin has to be news bulletin or newscast. Nor, does it state that
an information bulletin can't be opinionated.

2. The FCC has stated repeatedly that there is no time limit on
information bulletins, in the FCC rules

3. It is up to the station transmitting the information bulletin to
make sure it is amateur related, notthe stations listening.

Whatever, the fact is that there is NO FCC RULE that states an information bulletin can't be opinionated, if the FCC wanted it to be just "newscast" they have the power to clarify that it only be an newscast. The question then to be raised is if they limit it to newscast and not allow opinionated information, how does it not violate Section 326 of the Communication Act.

Nice warm fuzzy theory and it worked in a number of cases. Fact is
though that if a ham ticket was some sort of prerequisite for becoming
an EE the EE discipline would be basically to invisible in this
country. Which it certainly is not.

> Engineers don't make tons of money these days. Skilled trades folks are
> almost unwanted. I had to laugh, there were ads for toolmakers (a number of

I was raised in my Dad's 20-man took & die works but I wised up after a
couple years on the bench and went to engineering school, I know that
biz well. The job shop rate around here is in the $25/hr range. One of
my brothers who has his papers is knocking down $30+/hr and has UAW
bennies I'd kill for plus he has all the OT he can be bothered with.
Must be a *flock* of unemployed toolmakers around Rochester . .

Hello, Kelly

As I re-read the thread, I agree. You were stating "if a numbers game",
etc.

As to this area, Rochester is about as depressed as it gets right now. We
were rated number one or two a couple weeks ago.

You are correct in that a good toolmaker should be knocking down $30.00 per
hour or so. I made $12.00 plus an hour in 1978! I've heard some toolmakers
that were loosing their jobs that they refused to work for $10.00 per hour
and I don't blame them.

What goes around, comes around. 20 years from now, there won't be the
skilled workforce nor the engineers to fill positions. It will be sad, but
once we have sunk to equal to the lowest common denominator, there will be
no folks to fill the positions.

Of course, we can Kaizaan the problem (is the spelling correct?). The
managers can have a coffee and doughnut party, but it will be to no avail.

You know, I almost have to feel sorry for Lennie. His self-righteous, petulant indignation is giving me cause to be unsure of his stability.

Yes, Lennie, you sound akin to a petulant little schoolgirl who simply HAS to get the last word(s) in, no matter the cost.

ï¿½Neither am I bothered by raging hatred or "threats" against me levelled (sic) by some "outraged" person.ï¿½

Apparently I am not reading the same newsgroup as you, Lennie. Where is the ï¿½raging hatredï¿½ you speak of? Oh, I see. How DARE someone have the sheer audacity to disagree with you? Apparently that is, in your mind, ï¿½raging hatredï¿½.
Nor have I seen so much as a single ï¿½threatï¿½ posted by anybody, most especially W4NTI.

Who is this ï¿½outragedï¿½ individual you allude to? Oh, I understand. As soon as another poster has the insolence to question or contradict your statements, you ï¿½seeï¿½ an outraged person.

You really must calm down just a teensy weensy bit, Lennie. Stop taking everything you read as a personal affront. You are doing your hypertension little good.

(thanks for the laughs, nevertheless)

There are pro/con on all the above. IMHO the basic thing....recruit all
those you can and
let the chips fall where they will. You have to love Ham Radio to come and
join us. If you
don't.......(this will tick em off) WE DON'T NEED YA.

Dan/W4NTI

1884. Re: Why no Yaesu Prizes at Hamvention?

Newsgroup: rec.radio.amateur.policy

In 1963, the CBers outnumbered the Ham Population.

The number of US hams exceeded 250,000 in 1963.

1917 - about 6,000

1928 - about 17,000

1936 - about 46,000

1950 - near 90,000

1956 - over 140,000

1958 - about 160,000

1963 - over 250,000

1977 - 327,000

1989 - over 500,000

1997 June - 678,473

2001 Jan 1 - 682,240

2002 Oct 31 -- 684,355

Total number of USA Licensed Amateurs by License Class

As of May 14, 2000:

Novice - 49,329
Tech/+ - 334,254
General - 112,677
Advanced - 99,782
Extra - 78,750

Total all classes - 674,792

As of April 3, 2005

Novice - 28,869 (-41.48%) (-20,460)
Tech/+ - 318,221 (-4.80%) (-16,033)
General - 137,093 (+21.67%) (+24,416)
Advanced - 76,706 (-23.13%) (-23,076)
Extra - 106,238 (+34.91%) (+27,488)

Total All Classes - 667,318

Total all classes (5/14/00) - 674,792
Total all Classes (4/21/03) - 687,860
Total all classes (9/6/04) - 674,788
Total all classes (4/3/05) - 667,318

Total loss of 7,474 since 5/14/2000 (Was 674,792)
Total loss of 7,470 since 9/6/2004 (Was 674,788)
Total Loss of 20,542 since 4/2003 (all time high of 687,860)

Notes,
For the 9th straight reporting period, all classes except for Extra declined. There was a net loss of 845 licensees in this reporting period from the last reporting period.

The base totals are from implementation of the then new licensing changes in May 2000. September 6, 2004 is the date I started measuring the changes. The peak number was in April 2003.

Your right Jim. I see no chance for the USA to stay on top. IMHO it is due to the liberal mindset that started in the 60s and has taken over our public schools and Universities.

And I see no help for it.

>If all this is true.....where is K1MAN's "call in talk show" ????????????
>Dan/W4NTI

I don't know Dan, but what i've heard he has moved frequency, I can ask him if you want. But the FCC ruled last year that the content of his station was legal, except for the reward he offered for the names of the people causing Interference. But the content of his station was legal, the FCC seems to go after him for interference.

You are so ignorant, and naive Todd. He didn't change frequency. He was told to knock it off. 14.275 BELONGED to him. Just ask him. Go ahead and have a chat with the wannabe broadcaster....tell him this.....if he comes back on 14.275 the war resumes.

You are going down the same trail Todd......pay attention for once.

While the current administration would like to make out that the "economy is strong", there seems to be mounting evidence that it is harder for people to increase there economic situation, move up the ladder of success, etc. Immigrants who used to only take 3 generations to get from where they are to the mainstream middle class are now expected to take six generations to do it, if at all. The country is, reportedly, becoming less of a meritocracy, where people move up based on their ability, and more of a "caste system" where people are born to an economic level, and move up only with great diffuculty.

See:

http://www.csmonitor.com/2005/0523/p17s01-cogn.html

This is probably at work for holding back a lot of potential amateurs. You don't go spending the money you might once have spent on a radio if you're 30 yrs old and a technical geek - you now spend it on the rent.

Prosperity is becoming more of a rare thing, with really staggaring numbers of jobs being shipped overseas because their workers will build a software program at a pay of $30K per year, compared with a worker here that gets $80K per year. The general "think" on this by the American public seems to be that the $80K SW engineer here is just too greedy, and deserves to be out of a job in preference to the $30K a year Indian or Russian or whoever. IOW, grassroots opinion is supporting the outsourcing.

So this is probably the basis for how this hobby, and a lot of other hobbies requiring the spending of significant cash, is going to fail - not for lack of personal interest or ability, but from an economic lack of ability to reasonably pursue the hobby. Yeah, we've always sat around and wanted a bigger

tower like Chief Brody wanted a bigger boat - but the basic stuff of ham radio, a decent transciever, is likely harder for the newer hams than it used to be for us. Heck, we had Heathkit! Now, people either don't have good jobs, or their present jobs are so uncertain that they won't spend the money and go in debt for the radio or tower or whatever.

So, welcome to the 21st Century.

What to do about it? The income tax is largely at work here. Corporate taxes make producing things here more expensive. Companies ship their jobs overseas where the aren't taxed so much - if India were to tax a worker there 50%, and take that $30K a year SW engineer down to $15K, is that more or less expensive overall than using the Stateside SW engineer at a 28% rate for that level of salary. 28% of $80K is $22,400. So, that's _more_ $$$ down the drain for taxes here than a 50% tax overseas would be.

Get rid of the income tax, and espcially the corporate income tax, and replace it with a sales tax, and all of a sudden that cheap accounting software package from India that used to cost $200 now costs maybe $260. In the meanwhile, the equivalent product built here, for $250 or so, first has its price go down from the USA-based company not having to pay income tax, and then add the sales tax percentage, and you get a _much_ more competitive USA-built piece of software.

Hooray! Its what we need now... I mean _NOW_.

>I will leave the speculation and 'hard data' gathering processes to
>others who show an interest in data processing. Their efforts will be of
>little value in the long term scheme, other than they gathered some

>
>Meanwhile, catch me on the HF bands. I'll leave the overcrowded two
>meter repeaters to the handi-talkie newbies.

Well, there's nothing wrong with repeaters, handi-talkies, and newbies. We need the newbies, and having lotsa repeaters is a _good_ thing.

This is 2nd hand from a local ham telling the story of an emergency exercise involving FEMA and a communications network over a local repeater. Everything was going outstandingly when the FEMA guy thought he'd throw a monkey wrench into the works. He went over to the net control guy and told him to simulate the repeater going down. Net control just called the guy with the biggest home signal and told him to tell everybody to go to another local repeater, and the net was back on the air pretty much without skipping a beat. The FEMA fellow said, "How'd you _do_ that?" NC just smiled and said, "Hey, we have backups!"

> For me, Memorial Day is more than honoring those who have died.

At the risk of appearing to be an unsensitive old galoot, and at the further risk of alienating the 2 YL's who want to honor Rosie the Riveter on Memorial day, I must strenuously disagree.

There are a lot of well-deserved "days" to honor veterans and servicemen in general, and those others out of uniform who labored "in the cause", but Memorial Day is NOT that day.

Memorial Day (originally called "Decoration Day" because the main activity wasn't an extra Monday off for a barbeque in the back yard, but rather decorating grave sites) was established specifically to remember those honored comrades in arms who LAID DOWN THEIR LIVES for us. Let's never dilute that sacred honor by turning Memorial Day into another "feel good day" for every other patriotic group who wants to tag along on their glorious sacrifice.

The rest of us have Veterans Day/Armistice Day, Labor Day, Armed Forces Day, Navy Day, etc. to recognize our contributions. Can we be content with that?

Hello, Dan

Cutting aid to eduation, the V.A., and other programs is a function of the liberal mindset?

Meanwhile, a ton of cuts for the rich. BTW, they want to eliminate the deposit (5 cents) per can of soda (and other stuff such as beer) in NYS. They wish to replace it with a similar *tax*! Have you noticed that they wish to eliminate (or have they already) a deduction for energy efficient vehicles - yet retain a deduction for SUVs weighing over .... what is it, 3

tons?

The so-called liberals wanted the deposit to encourage folks to return the cans and not leave them all over the place. Pataki (our governor) and his gang (republicans) want to replace the deposit with a *tax*! They can't stand to see the money returned to the people.

The reality is that the Republicans want to kill the poor to save the rich.

Nice try.

Given a few years of our troups being killed in Iraq, I'll be interested in seeing how they will replace them. Duty *forever* in Iraq is not likely to work.

I had no problems with attacking Afganistan. Iraq, however, with its' weapons of mass destruction .... well, sooner or later the folks with the modest double-digit I.Q.s will wake up. How many weapons of mass destruction have they found? England is really upset with Tony Blair. They want him out. I offered to trade Bush for him, but, unfortunately, no one wants Bush.

Of course, the Democrats that get elected because of this will be blamed when they have to make changes. Changes will have to be made, whether we like it or not.

BTW, I didn't inhale :))

Best regards from Rochester, NY

> For me, Memorial Day is more than honoring those who have died.

At the risk of appearing to be an unsensitive old galoot, and at the further risk of alienating the 2 YL's who want to honor Rosie the Riveter on Memorial
day, I must strenuously disagree.

There are a lot of well-deserved "days" to honor veterans and servicemen in general, and those others out of uniform who labored "in the cause", but Memorial Day is NOT that day.

Memorial Day (originally called "Decoration Day" because the main activity wasn't an extra Monday off for a barbeque in the back yard, but rather decorating grave sites) was established specifically to remember those honored
comrades in arms who LAID DOWN THEIR LIVES for us. Let's never dilute that sacred honor by turning Memorial Day into another "feel good day" for every other patriotic group who wants to tag along on their glorious sacrifice.

The rest of us have Veterans Day/Armistice Day, Labor Day, Armed Forces Day, Navy Day, etc. to recognize our contributions. Can we be content with that?

de Hans

.

Point well made, Hans. Feel no qualms about alienating the 2 YL's. They meant well despite their lack of direction on the true purpose of this day.

You are not insensitive. You are correct.

Hello, Dan

Cutting aid to eduation, the V.A., and other programs is a function of the
liberal mindset?

>No. The liberals want to increase taxes to pay for these entitlements.
Trouble is the Liberal mindset is that there is never enough taxation.
Who pays these taxes?
Liberals brought us Medicare, a system fraught with fraud and theft. Dittos
for Food Stamps. Likewise for Govt. subsidized housing, now in the third and
fourth generations.

Meanwhile, a ton of cuts for the rich. BTW, they want to eliminate the
deposit (5 cents) per can of soda (and other stuff such as beer) in NYS.
They wish to replace it with a similar *tax*! Have you noticed that they
wish to eliminate (or have they already) a deduction for energy efficient
vehicles - yet retain a deduction for SUVs weighing over .... what is it, 3
tons?

>Look at the facts. The "rich" pay far more than the every day Joe Sixpack
worker.
http://www.rushlimbaugh.com/home/menu/top_50__of_wage_earners_pay_96_09__of_income_taxes.g
uest.html

The so-called liberals wanted the deposit to encourage folks to return the
cans and not leave them all over the place. Pataki (our governor) and his
gang (republicans) want to replace the deposit with a *tax*! They can't
stand to see the money returned to the people.

The reality is that the Republicans want to kill the poor to save the rich.

>Yet more Liberal invective based on emotion rather than facts. Why not do
what other states are doing. Eliminate the silly deposit requirement?
Typical Liberal mindset. More Goverment intervention into personal lives...

Nice try.

>Poor try.

Given a few years of our troups being killed in Iraq, I'll be interested in seeing how they will replace them. Duty *forever* in Iraq is not likely to work.

>Yet the morale of our troops is extremely high and despite the liberal press, they come home feeling as though they are doing a good thing. Dan Rather and you excluded.

I had no problems with attacking Afganistan. Iraq, however, with its' weapons of mass destruction .... well, sooner or later the folks with the modest double-digit I.Q.s will wake up. How many weapons of mass destruction have they found? England is really upset with Tony Blair. They want him out. I offered to trade Bush for him, but, unfortunately, no one wants Bush.

>That explains why he won a second term, hands down, despite rampant voter fraud in the blue states.

Of course, the Democrats that get elected because of this will be blamed when they have to make changes. Changes will have to be made, whether we like it or not.

>After 8 years of our troops, ships, and yes, the First Ever World Trade Center Bombing under Clinton's rule...changes indeed must be made. Terrorists were emboldened by Clinton's inaction and yes, cowardice.

BTW, I didn't inhale :))

>Not necessary. Your thought processes are already befuddled enough.

Best regards from Rochester, NY
Jim AA2QA

>Dittos.

>And while I have the podium, Jim, I agree with Dan on this one. The Liberal mindset has turned our schools inside out. Our kids cannot recite the Pledge of Allegiance because it has, GASP!, the God word in it. Yet the Muslim kids in New York are allowed to kneel toward Mecca several times a day and the Liberals say not one word about that. That is called "tolerance", while any mention of God has to be dealt with and eliminated quickly lest the Christians "indoctrinate" our kids.
Graduating eighth-graders have never heard of the Getteysburg Address, Antietam or Atlanta. I guess their liberal teachers were too busy teaching them to be "tolerant" of alternate lifestyles. Our sixth graders have no idea who Abe Lincoln was, that he enacted the Emancipatiion Proclamation, but they know all about Martin Luther King and Muhammed.
Our fifth graders know nothing of our Constitution, but they know that guns are bad and Rap Music is good.
Our fourth graders don't understand why their mommy and daddy got a divorce, but they know that it is OK for Little Johnny to have two Dads or two

Mommies.
Our third graders are fast learning that they cannot bring to school photos of their dads or moms who are serving in the military for Show and Tell. Allah forbid that the kids should be subjected to a photo of a proud Marine doing his or her duty for our country. The liberal teachers call that "zero tolerance".
Oh, the latest Liberal hoot? A couple of school systems are now being ever so gracious in allowing the kids to recite The Pledge, but they must now omit the Gasp!, God word and replace it with "your belief". How sickeningly politically correct.

The Liberals, accompanied by the likes of Chappaquiddic Ted are doing our country great harm. You could't pay me to be a Democrat, but obviously there are those who can be.

Dan is correct on this one. You lose.

1902. Time To Pay Attention, Brian.

> >
> > Sheeeeesh....
>
> You've been warned.

You've been warned too. You seem to think that your inane
"threats" and "warnings" in this forum cause me some ceoncern.

They don't.

> > Well, Brain...Today being the day it is and your posts being what
> > they are, you've proven once and for all that "stupid" doesn't take
> > holidays.
> >
> > Steve, K4YZ
>
> Indeed. You should know enough to stay away.

No...YOU should know enough to stop making assinine posts that are
so transparently stupid that they wil be challenged for their
stupidity.

And as for "warnings", here's one for you...You've called me a
liar about my MARS participation and some of my former USMC duties.
You've been given more than an adequate amount of details to validate
my claims. You continue to call me a liar and other similar
adjectives.

Your margin for maneuvering is narrowing rapidly, Brian. I
strongly suggest that you reconsider your present conduct and claims,
lest you care to discuss them in ANOTHER forum. And once they move to
that forum, your behaviour in THIS forum will be beyond your capacity
to hide from your family.

Pooh-pooh that away if you care to...But you do so at your
peril...

No, Len, that's not true.

I "assume "Arf! Arf!" is legitimate because there's no evidence
that he isn't.

Some time back an anonymous poster calling himself "Leo" appeared
here. Claimed he was a ham in Canada. You considered him "legitimate".

So what's the difference?

> The Pastor does give lip-service to all the PC phrases AS IF
> he "had been there, done that" when his real purpose is to
> level a personal attack on his newsgroup "opponents."

I know what "chairborne" means, Len. Doesn't matter if I was
part of anything or not. In fact, it's not about me at all.
>
> That is followed by:
>
> >> Len does not answer most questions. He says they're "loaded",

That's a plain, simple fact, Len. You don't answer most questions
posed to you here.

> "It is clear they are not" is one of the most hypocritical
> of the Pastor's statements. Jimmie LOADS questions in order
> to elicit a response he can then attack them as "mistaken."

OK, Len - then give us some examples of these "loaded" questions.
Show us what you mean.

> >> > What was your MOS and what did
> >> > you do in the service of our country?

> >> Now ya did it - he'll do a couple dozen kilobytes about ADA
> >> *again*...

> Poor Jimmie. NEVER was in the military,

So? I never claimed to be. It's not about me.

You've told us about your exploits at ADA many, many, many times,
Len. That's the point.

> NEVER worked any professional communications,

How do you know, Len? And why does it matter - it's not
about me.

> NEVER did much except play with
> his "homebuilt" hobby radios.

Now, that's not true at all. I've done lots of things -
including many things you haven't. That really seems
to bug you, Len.

> But, Jimmie will idolize and
> rhapsodize on the pioneers of radio doing their thing before

I don't claim to know all about it. Just some things.

You ever do any parachute jumps, Len?

Give disgruntled Len a two hour course during Jump Week at Benning, duct tape his Relys to his hips and let him fly.
I guarantee you that by the time old Lennie hits the silk he will have more than filled his Relys and will be well on his way to filling his reserve Rely.

By the time he lands he will have done Double Doodie.

I don't think you're the slightest bit interested in whether you are alienating me or not, Hans. So, your feeble attempt to reconcile the angst of your original response to mine is lost, since I'm sure you're more interested in the fact that Dee (someone who you are probably more inclined to want to pat on the head) aligned herself along the lines of what I was thinking.

In addition, no matter what the "original" Memorial Day was intended for. We've come a long way in this country. As you mention, there are days specifically angled at the military (Veterans Day, Armed Forces Day) wherein it may be more appropriate to remember "just" our military heroes.

However, I doubt "back in the day" a second thought was even raised or given to remember the "civilian" side of the military. A parallel might be something along the lines of completely disregarding that many amateur radio operators have been involved in the public safety efforts of our hometown heroes--and I've never yet seen a major display of recognition or thanks for that. It's true that our police forces and rescue forces, right down to the 911 call handlers and dispatchers locked away in the confines of the office, are all paid and are "in there" for our safety, and confronting dangerous situations. It's also true that there are many civilian aspects, amateur radio for one, that are "in there" for our safety, and confronting dangerous situations also.

You may wish to remember only those who are/were in the military--and of those, maybe only persons who have perished, Hans. And, I point out, I haven't jumped down your throat for a thing. I posted a wonderful article about a fantastic person and you came back with nothing but hate, contempt, and angst. You could have made the adult decision to allow someone else their belief. You did not, and you still haven't "changed my mind." Do you know why? Because my choice to remember another aspect of the defense and continuation of the United States of America on a day like Memorial Day is my personal choice. I'll point out here that there are many civilians who have died in the support of our military, home and abroad. And, I did not say I remember them at the absence of anything grand or proud about Memorial Day. I remember our civilian contribution *in addition* to the military one.

It is in the spirit of the times (the fact that we've "grown up" in this country--note that the female contribution to the military has always been there; but hardly has it always been celebrated and recognized as it is today) that I take pause every Memorial Day and remember the people who settled this land which, incidentally, were the North American Indians, the people who conquered this land (our forefathers), the people who shaped our nation (our ancestors), and the people whom have defended her since--our

military and others who "have served." And, I shall continue to do that, Hans, as you shall continue in your traditional way.

As and aside, I find it interesting that you chose to point out "Veterans Day/Armistice Day, Labor Day, Armed Forces Day, Navy Day, etc." (minus Labor Day, incidentally) as days "the rest of us" have to celebrate others' contributions. I would certainly not set aside Veterans Day to recognize and celebrate the contributions of civilians, nor for Armed Forces or Navy Day. For me (note the "for me," Hans?) those days are especially for those who have served...in the military.

And, you are an in[sic]sensitive old gloat and that appeared long ago, not because of this exchange.

Oh, so you *are* a lisping cocksucker. Your little girly voice
proves that you are less than manly, too.
Get that desperately needed Rogaine,yet?

> my 'children' are grown, much wiser and more decent than you
can ever hope to be.

At the very least, they have your molesting them to work through
with the many psychotherapy sessions they are forced to go to.
And because they didn't have much of a childhood, for you
weren't a good provider and just sexually and physically abused
them. They sure don't have anything else they want to remember
you by.

> Who's whining

You are, bitch boy! Now whine boy, whine. I command you to whine
in your followup! Just like one of Pavlov's dogs.

> about you wogie? We don't whine about you, we just laugh about
> you, two-test.

And your cocksucking lisp keeps us laughing about you, as well
as because you just make up words like "wogie" and "two-test."
That must be because you just have that obsolete license and are
bitter about it, and a "pilot's license" only in your tiny
little remaining brain cell.

> Laugh about how Riley made you retest for you to keep
> your ham license because he caught you red-handed violating
the FCC

> regulations.

Really? Funny that Roger's retest letter doesn't state that.
Poor thing, you are so fucking senile you can't read anymore?
Your reading comprehension wasn't the best to begin with, given
your mental retardation, but now you're really going downhill.
But you got a letter from Riley as well, didn't you?

>We laugh about how you brag about your welfare extra ticket

And we laugh that you are too stupid and lazy to even get that.

> Worked any DX with that *PERMIT*

You could, I suppose, but I prefer to work it on the sections of
the bands you can't go because you are too stupid and lazy to
even get the Extra. Maybe you can bang on that cheapassed Ten-
Tech equipment you have and get it to work for you. That sort of
junk is so unreliable, sort of like your wife.

Fly those model airplanes and pretend you have a pilot's license
lately, shit for brains?
BHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAH

> >
> So who is going to educate them?

The same sort of folks who educated me. Most of what I learned about
ham radio in my teens came from books and personal experience. Now

we have the internet too.

> How many ham stations have you
> seen at a school lately?

More than existed when I was in grade and high school.

> For that matter....when is your club going to put

> computer systems????? He was a ham....forgot his call.

You mean Kevin Mitnik (sp?) Yes, he was a ham - but he did not violate
Part 97,
nor any other radio service (that I know of).

His crimes were all about hacking into computer systems. Which cost him
his
ham license (just like the KV fella) because FCC considers all
violations,
particularly those of the Communications Act, when granting licenses.

Flippo and Gerritsen were convicted of *radio* violations. They're both
a long way from being teenagers.

> > Or you can look at the behavior of one "retired from

Agreed.

> You have to love Ham Radio to come and
> join us. If you
> don't.......(this will tick em off) WE DON'T NEED YA.
>
The trick is that if they don't love it, they won't stay anyway.

That's what I mean by "a means to an end". If someone got into ham
radio
as a means to local "honeydew" communication, they're likely to have
replaced their ham rig with a cell phone. But if they got into ham
radio
because of interest in "radio for its own sake"...the cell phone won't
change their interest any more than a wired phone.

??. . ya got me. What does THAT mean??

> 2) One of the Basis and Purposes of the ARS

No counter, that nonsense is a long-since worn out old bureaucratic relic/crutch which needs a serious update. Ham radio is a recreational pastime with some value in it's ability to provide emergency comms and not much if anything else.

> is education - which
> includes things like educating youth. Even if a young ham does
> not become an engineer or technical type, the technical background
> of ham radio is a good thing to have.

> 3) The ARS has the image of an "old white guy's hobby" in some
> circles.

In a *lot* of circles and they're basically right. This phenomenon is a result of evolutionary forces at work within the hobby. There are two choices here: Go with the obvious flow and accept where Mother Nature is leading us and take advantage of it -OR- fight Mother which is always a losing battle and try to keep applying the mores, values and expectations of the yesteryears when we came into the hobby 50, 30 even 20 years ago. So yeah, ham radio has been moving toward being an old white fart's RF spectrum playground for years. Once more I ask *so what?*

> While that's not an accurate picture, losing younger
> hams isn't going to help things

We can't lose what we don't have.

> 4) Young folks have a lot to offer the ARS.

Beats me, name a few of those. Besides kids being better tower monkeys
than us geezers are.

> > If it's a numbers game why not shift gears and recruit retirees instead of chasing
kids?
>
> That's been going on for a couple decades now.

Don't agree. Point out one example of a formal effort to consciously
recruit older folk. Which is like all the widely publicized (and
generally failed) programs which have been targeting kids over the
years.

> Look at the folks
> we did FD with a few years ago - most of the older folks in that
> crowd were licensed after age 55.

Exactly, you couldn't have made my point any better, thankew. If we're
playing a numbers game and/or if we're trying to find the most
promising market sector for recruiting puposes it's obvious to me that
the older crowd, particularly the retirees would be much more fertile
territory than the kids. Take a hypothetical example: The ARRL sets
aside $100k for a one-year recruiting campaign and brings in a
marketing firm to handle it. The firm gets up to speed on the
demographics of the hobby and reserches where new members are coming
from *today* and where they're not coming from. My bet is that they'd
spend the majority of the dollars on getting ads and articles into the
AARP magazine vs. spending any of it on demonstrably futile SOP ARRL
kiddie chasing expeditions.

> The thing to do is what Dee says - recruit anyone with an interest.

Of course but that has nothing to do with reaching out which is where
I'm coming from. .

> > The retirees are far more independent than kids,
>

Oh come on James, if there's a *thousand* of those twistoids and
miscreants in the hobby they'd represent a lousy 0.15% of the total
licensed population. The rest of society should be this free of
a-holes.

Well you strike out again wogie, but then what's new? Both of our well adjusted, mature and successful children live within a few blocks of the wife and I and we have 8 wonderful grandchildren. Sorry about your abusive childhood that led you into a life of bitterness, drugs and mental health problems. Too bad your marriage failed, you wife walked out on you and non of your children want anything to do with you. Could there be something about that we don't know wogie? Maybe you were the molester. I would wager that the local Child Protective Services keeps an eye on you wogie. You wouldn't even have a house if it weren't for Marie leaving you that hovel you live in down there by the creek.

>

But another letter did. Poor wogie, had to retest to keep his license
because the FCC caught him red-handed violating the FCC regulations. The
FCC doesn't make someone retest just for the fun of it. There is always
some violations of the rules involved.

So why do you keep talking as if you arent' wogie, wogie? Can't even
stand yourself I suppose.

Never had a letter from Riley wogie, again you don't have a clue.

Ten-Tech? Another strike out wogie, I don't use Ten-Tech equipment.
Poor wogie, doesn't have a clue.
>That sort of
> junk is so unreliable, sort of like your wife.
>
> Fly those model airplanes and pretend you have a pilot's license
> lately, shit for brains?
> BHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAH
> AHAHA!!!!!!

Poor wogie, best he can do is a welfare Extra-lite ticket he got at a
license give-away VE session, no technical knowledge required, and a
Restricted Radio Operator *Permit* that you just fill out an FCC form
for. What happened to that 2nd Class ticket you claimed to have wogie?
At least I do have a pilot's license and can prove it to anyone who
cares to come see it. Can you prove you have a 2nd Class ticket wogie?
Didn't think so.
Poor two-test, he can only hope Riley doesn't make him retest again.

Wogie, the laughing stock of the ham radio and the Internet.
HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA!!!!!!!!!!!!!!!!

I mean't to say....What kind of word is that?
Don't you say on your blog that your show is on 20 meters on Saturday's
at 4.00 pm?
Does this mean that you are lying on your blog? Get it right toad, you
can't have it both ways! Didn't you go off on a rampage and blame
KC8GWX , Rand Fuller of attempting to jam your show?
Do you know any other words besides B**** F***** A**H***
BTW the way toad, I'm not so little, so stop calling me little, I've
seen you and it wouldn't take me more then 10 seconds to slap you into
the little whining gay boy that you are!
I've got a copy of the tape, so you can pull all your antennas down,
heck you didn't have any antennas up last month when you were going to
get on the liberty net!
Name 1 person here that has had a QSO on hf with you, even just name,
QTH, RST. You've never been on HF idiot and before you insult my
intellect you better get some more "intelegents" your self.
Hey gayboy, schools out, you were fired last fall so you couldn't have
gotten through more then 1 semester, get a job, McDonalds maybe?

>thinking.
>
>...

Well said, Kim. There's a strong undertone (perhaps "undertow")
of unwanted machismo present in this group of "mighty warriors."

In the morning edition of the Los Angeles Times, 30 May 2005,
was the story of Marie Michell Robinson, a 20 year old WASP
(Womens Air force Service Pilots) who died in the October 1944
crash of a B-25 twin-engine bomber she was co-piloting in the
Mojave Desert region of California.

WASPs were not military members but neither were they exactly
ciivlians. They earned a base pay of $250 a month but had to
pay all of the meal and lodging costs out of that (even if
stationed at military bases) and had to pay for their own
uniforms. Marie had been married just two weeks to Major
Hampton Robinson, an Army medical doctor.

The crash site was re-found by a trio of amateur aviation
"archaeologists" in southern California who had (on their own
time) searched for over a year to relocate the crash site.
The trio found it in early May. While Marie's body had been
recovered over a half century before, the trio uncovered her
personal belongings: A wedding band, bracelet (with name and
wings emblem), a WASP pin, nail file, and a wristwatch whose
hands had stopped at 1:40 PM, the time of the crash. Personal
items of the other two crew members were recovered and all are
being returned to their surviving family members.

WASPs were not given veterans' status until 1979.

Source: LA Times, 30 May 2005, Valley Edition, Section B,
page 1, written by H. G. Resa, Times Staff Writer; includes
photos of personal articles and one of the amateur aviation
archaeologists.

>In addition, no matter what the "original" Memorial Day was intended for.
>We've come a long way in this country. As you mention, there are days

>specifically angled at the military (Veterans Day, Armed Forces Day) wherein
>it may be more appropriate to remember "just" our military heroes.

During World War II the WASPs weren't military, weren't civilian,
yet they served the nation by giving up their time to aid the
war effort. Some gave everything: 38 WASPs died in that service.
They were not acknowledged as "veterans" by the U.S.
government until 25 years later.

This country is a bit late on following-through about "coming a
long way" but it just barely manages to keep up. Three civilians,
on their own voluntary time and not members of the military or
government, relocated the crash site and uncovered personal
belongings, found and notified remaining family members. They
honored the true spirit of Memorial Day.

Several individuals in here do NOT keep up and they pervert the
meaning of Memorial Day to serve their own egos. Most of those
were not even born when World War II ended...yet they seem to
demand strict adherence to Their "Rules" of memorialism. Some
have rather insane definitions of honoring the fallen such as
remembrance and honor being classified as a "dishonor."

All that in a newgroup supposedly about policies in a HOBBY
radio activity. Tsk.

Oooooooohhhh! :-)

Sounds like the usual HATE group sloganeering. Do you have
that mighty macho morseman slogan on the white sheets you
wear at your "clubhouse?" Printed on old confederate flags?

Talk to the ARRL marketing folks...maybe they can make those
sheets (and presumably T-shirts for informal wear) available
by mail-order (shipping charges extra)?

Does your "ham club" have a regulation ring or do you have
your regular fight nights on bare dirt?

Sounds like "lots of fun" for a radio hobby...

>sure you were very enthusiastic in your duties.

IN aerospace industry doing specific space related work:

Electro-Optical Systems, Pasadena, CA (then a Division of Xerox,
now a Division of Loral) as spacecraft fabrication engineer.
Clean room environment, strict QC, microwelding of "cordwood"
and all soldering/inspection under 10x stereo microscopes.
Unmanned spacecraft packages included Mars Mariner 67,
Quadrupole Spectrometer, ALSEP (Apollo Lunar Surface
Experiment Pacakage) SWS (Solar Wind Spectrometer). 1960s.

Rocketdyne Division of Rockwell International, Canoga Park, CA
MTS II (Member of the Technical Staff), Instrumentation
Engineering Group, doing instrumentation design for laser
deformable mirror program (an initial part of the "Star Wars"
program under President Reagan), LOX flowmeter replacement
on the SSME (Space Shuttle Main Engine - there are three on
each Shuttle), classified work for Atomics International
(a spin-off of Rocketdyne, also owned by Rockwell then).
1980s. Boeing Aircraft Company bought Rocketdyne a few
years ago and sales are pending for Rocketdyne to be sold to
another corporation. Rocketdyne was originally a Division
of North American Aviation; Rockwell bought that with the
Division being part of the package. Shuttle was designed
and built by the main aviation group.

NO custodial services performed for any employer, any time.

I was enthused by nearly ALL projects.

So, what did Stebie do after being fired as a Purchasing
Agent of a small company after less than a half year of
employment? Go back into custodial services or continue
cleaning bed pans? :-)

Temper fry.

>> Gotta take some serious "cajones" to ENLIST voluntarily...or
>> even accept a draft notice (which Jimmie never did).
>
>Did you ever "accept a draft notice", Len?

Couldn't. Was already IN the U.S. Army. The Army Serial
Number I was given had the prefix "RA" on it...that denoted
a VOLUNTARY ENLISTMENT. Those who got draft notices and
went in that way got the "US" prefix.

What was YOUR prefix, Jimmie?

Oh, that's right, I almost forgot that the Army switched
from ASNs to the Social Security Number in 1969. Tsk, tsk,
YOU could NEVER have an ASN!

>> Jimmie "knows" all about parachute jumping in the military.
>
>I don't claim to know all about it. Just some things.

You are way too modest. You've read about so many things.

>You ever do any parachute jumps, Len?

One.

For personal experience. Wasn't a requirement in radio.

Maybe it's a new requirement in AMATEUR radio now? [I must
check with the FCC more often...they "revise the amateur
regulations so often" and everyone knows (in here) that
amateur radio is "a vital important service to the nation"
as I've been told by others]

No, parachute jumping is NOT a requirement for amateur
radio. Last change to U.S. amateur radio regulations was
in 2002...something about amateur antennas...

How many Jumps have YOU made, Jimmie? [other than through
those hoops]

Does everyone have to Jump when you command, Jimmie?

1940. Todd's Challenges...A Response (While Holding Back The Laughter)

Newsgroup: rec.radio.amateur.policy
Date: 2005-05-31 21:08:32 UTC
From: K4YZ <k4yz@aol.com>
Message-ID: <1117573712.328894.258140@o13g2000cwo.googlegroups.com>
Source record: 109273

Todd sent me a couple of challenges...thought you might get a
laugh from them:

Item First:

QUOTE

n9ogl has sent you a link to a weblog:
Are starting again at voice and giving everyone chance.
If you want I will let you write guest colum of other opinion.
Up to the chalenge, retard?

Todd

Blog: The Voice of Amateur Radio
Post: NEW WEBSITE
Link: http://n9oglvoice.blogspot.com/2005/05/new-website.html

UNQUOTE

The "chalenge", Todd, is getting through your "posts" and
"letters" without getting a headache from deciphering your
semi-literate grammar.

There is no way on God's Green Earth that I would "guest write" a
column on a blog of yours, thereby appearing to lend even the most
indirect or unintentional "legitimacy" to your "blog".

Item Second:

QUOTE

K9OGL has sent you a link to a weblog:
Are starting again at voice and giving everyone chance.
If you want I will let you write guest colum of other opinion.
Up to the chalenge, retard?

Todd

Blog: The Voice of Amateur Radio
Post: THE ARRL LIES!!!!!
Link: http://n9oglvoice.blogspot.com/2005/05/arrl-lies.html

UNQUOTE

Who is "K9OGL", Todd? Can't even get your own call right?

And Todd...

If you're going to call someone else a "retard", you really ought to not make the claim in a sentence that makes it appear as though the claim was MADE by a "retard"...(Although in this case we would be correct...)

And I repeat my previous assertion...There is no way on God's Green Earth that I would "guest write" on your blog, thereby lending, however unintentional, some "legitimacy" to your blog.

Steve, K4YZ

> employment?

"Stebie" wouldn't know. "Stebie" wasn't fired, and you continue
to get other bits of information wrong, Lennie.

This has been readdressed to you before. Why do you continue to
get it wrong? Just looking at past headers on messages proves that
much.

> Go back into custodial services or continue
> cleaning bed pans?

I don't do either. Benefit of being an ER Nurse.

You won't alienate me unless you stoop to the disgusting tactics of the likes of Todd. I seriously doubt that you would ever fall to such depths.

> There are a lot of well-deserved "days" to honor veterans and servicemen
> in general, and those others out of uniform who labored "in the cause",
> but Memorial Day is NOT that day.
>

There is no day to honor those not in uniform who gave all they could to support the soldiers. I've searched every holiday list I can find and there is nothing. It harms no one for me to choose to include those people in my thoughts.

> Memorial Day (originally called "Decoration Day" because the main activity

>

I do not believe it dilutes their sacred honor.

> The rest of us have Veterans Day/Armistice Day, Labor Day, Armed Forces
> Day, Navy Day, etc. to recognize our contributions. Can we be content
> with that?
>

None of these honor the civilian contributions to support the soldiers. Labor Day has nothing whatsoever to do with honor those who supported our soldiers. Instead it was proposed in the 1880s by the labor unions and adopted as a way to recognize the everyday worker for their contributions to the economy and society.

Who said they were?

You sound like a powerboater trying to ruin the fun of sailboaters.

> True enough. History - as far as some folks' attitudes -
> DOES repeat itself, again and again. :-)

Yep, we see your same old tired wornout attitudes here again
and again, Len...;-)

> The paradigms of yesterday just DON'T apply today.

Some of them do. Or do you insist on a continuous techno-cultural
revolution?

> Those
> reasons for being have been crowded out with a cornucopia
> of NEW, challenging avocations affordable by most. The
> world and technology has CHANGED. Some people haven't.

Is that a bad thing? Is all change somehow good?

>
> The inability to change, to accept change, may be a human
> survival trait? The "familiar" represents "security." It
> is known. To be good at something is comforting, reassuring.
> To individuals. But, the overall "tribe" has accepted
> change, accepted it, and is enjoying it.

Not all change is good, Len. The fact that the mob does something
does not make it better, or right.

Look at the contest between the text messagers and the Morse Code
operators. The "tribe" (the audience) was so sure the world-champion
text messagers would be faster than the Morse Code operators in their
historic costumes. Yet the Morse Code ops, going about 1/3 world
record speed, passed the message perfectly, without abbreviations,
and presented the result in written form before the text messagers
could even get the message inputted into the 'phone. (They had two
words to go - "car insurance").

And it's rather surreal to see you lecturing and posturing on
"young'uns in Ham Radio" when it was *you* who suggested to FCC that
no-one below the age of 14
years be allowed to obtain *any* class of amateur radio license. Yet
when asked
for examples of young people causing problems in amateur radio because
of their
youth, you could not give a single example.

You've never met the requirements for any amateur license, Len,
and some of your interpretations of Part 97 have been shown to
be in error.
>
> How many Jumps have YOU made, Jimmie?

What does it matter, Len?

Suppose I had 100 parachute jumps on record - would you behave any differently towards me?

I don't think so.

I see how you behave towards those with more service time than you - with more experience than you - with more education than you. Doesn't matter what their qualifications are, if they disagree with you, they are treated to your classic jackass behavior.

Please note that I described your *behavior*, Len, not you. I have not called anyone on usenet a jackass. Certainly not you, because I don't think you're a jackass.

If I were to call someone a jackass, it could be an insult to jackasses everywhere. Also, if a person really *is* a jackass, then they can hardly be blamed for *behaving* like a jackass.

But if a person is *not* a jackass, yet exhibits jackass behavior, they have only themselves to blame.

>And why should "Arf! Arf!" be treated any differently?

Perhaps you could enlighten us on that, Jim.....as I recall, you
yourself argued the other side of this point back in November, when I
was not agreeing with you (back in the 'Near Space Science'
thread).....your exact words were:

>> Didn't get past me. Leo sez he's a VE3. But no call, no last name, no
>> positive
>> ID, no website, no outside confirmation. Maybe he is, maybe he ain't.

Hmmm - let's see here....I wasn't agreeing with you, so perhaps I am
not legitimate. Yet here you make a case for Arf! Arf!'s existance
because he does agree with you.

That's a puzzle, alright - wish I could help you answer it! :)

73, Leo

Could you add the corresponding general population figures. Then we could
see if the number of hams is growing faster or slower than the general
popluation.

> activities.

Absolutely, the 40 and up sector is where I expect most new hams will
come from. By a wide margin. There's another factor out there to
consider. The Boomers are coming up fast on their late 50s/early 60s
and this bunch is a whole *lot* more tech-savvy than my generation is
and I'm only a few years older than they are. They're some serious
candidates for recruiting into ham radio.

> Personally I try to encourage everyone of all ages who shows even a hint of
> interest.

I believe we all have some responsibility to Elmer newbies into the hobby wherever they pop up. Which I call "passive recruiting". I'd like to see some "aggressive recruiting" aimed this time at the "over the hill gang". I don't think it's ever been tried before. Which is another good reason to take a whack at it.

>Hmmm - probably because I am! ..... :)

Nice to see you again, Leo! Of course, you have to realize
definitions in here are tangential to the Real World.

If you are FOR morse code testing by administrations, you are
"legitimate."

If you are against morse code testing then you are "illegitimate,"
"in error," "mistaken," "are a lying penis-head" and have
underarm odor.

Meanwhile, the anony-mousies may have gone back to their spam
letters of being some kind of "financial officer" of some
African country seeking "additional funds" to "get back"
millions in "held monies" and will freely "share some of that
"held money" if you cross their e-palms with more money. :-)

[anyone can be anything in this medium...and many are! :-)]

I'm not at all sure of what some of the cross-dressing anony-
mousies are in here. They may have been tossed off some porn
sites catering to "amateurs" and are confused as to content in
here... :-)

Ah.....the VN syndrom is still alive and well amongst the Liberals amongst
us. Hey Jim...didn't work then....won't work now. The Liberals EXTENDED
the VIETNAM WAR.....don't ya know?

> I had no problems with attacking Afganistan. Iraq, however, with its'
> weapons of mass destruction .... well, sooner or later the folks with the
> modest double-digit I.Q.s will wake up.

That's because you and apparantly a large proportion of the US public have
no concept at all of why we are in IRAQ. It's called divide and conquor,
it's called setting up a Democracy (or something close) right smack in the
middle of the Middle East. It's called ending this endless BS coming out of
the Jihad morons. I would rather fight them there then here. Wake
up....or would you prefere a bunch of ragheads in the streets of NJ killing
and raping your women and kids?

Far fetched? Burn a Quaron and see what the enlightened ones do. Oh,
sorry. We already saw a touch of that one.

How many weapons of mass
> destruction have they found?

They all went to Syria. They are next you know.

England is really upset with Tony Blair. They
> want him out. I offered to trade Bush for him, but, unfortunately, no one
> wants Bush.

Toad, once again, It's YOU'RE full of ****,
Why do you need to include Steve in every reply, if I learned about lying from anybody here, it's from you idiot. You forget that I've seen your ugly mug, pointy nose, gay stare. Do you really think typing in caps proves anything? You are like the idiot that thinks if he screams louder that he's right, that is until somebody shuts his mouth for him, like the FCC will be doing to you very soon! :)
Is Gaylorville anywhere near Gailsburg or Peoria? You lied about your ISP kicking you, you lied about your show being on, you lie about everything.
You know how to tell when the toad is lying? His lips are moving!
BTW, I saw your other gay page about you getting tied up by the 3 cowboys, I bet you got excited at the thought of that.
Sorry to hear that you have to goto summer school, are you taking your GED classes? Maybe when you graduate, you can get a managers job at Radio Shack!

Did you say "I think before you go around
accusing people of something that you make sure it was sent by that
person."
This from the idiot moron lying fool that has accused more then 1 person
of posting crap on his gay blog!
Toad, sue me fool, I have a tape! I'd send you a copy if you wouldn't
claim it was something else! Make sense of that!
>

Good old PCTA Extra Double Standard from Stebie. :-)

>So do you have documentation or don't you?

He doesn't but he's very busy thinking up new insults for those
that demand of him the same thing he demands of others. :-)

I give this loop about 30 more iterations. We ask, Stebie
insults. Stebie nebber comes up with documentation. Yawn.

>
>
>You really are an idiot, ain't ya Lennie?
>
>Are you not capable of reading headers?

Very capable. Been doing it for two decades now. :-)

Are YOU "Diana?" Tsk, I didn't accuse you of that, did I?

Do you have "friends" who post in your favor? I'm sure
you have lots of "friends."

> And I never have, nor will I ever use a fake ID, or address.

Riiiiiight. And the moon is made of green cheese.

Tsk, tsk. I've seen cases of some on subscription BBSs
(local networks) have two or MORE "identities," even to
calling from two different locations to try to outwit
the telephone company security folks. The Internet is
FULL of those fakes.

Some of those multiple personalities have been IN HERE.

"Quitefine" is still in here. :-)

>I say it the way it is.

Tsk, tsk, Dan/Whoever, You say it the way you PERCEIVE it.

So, are you going to go back to writing scam messages
about "recovering money from some African nation" or do
you have other "perfectly honest, noble, and absolutely
true" (also "unbiased"...BWAHAHAHA) statements to make?

You have a very low rating as a heckler, Dan. Take some
lessons from your PCTA peers on that. Those peers will
show you how to "peer" on those you hate. :-)

>
>Gee, Len, since you've never actually been a parent, it sounds
>like you're talking about something you've never actually done..

Gee, Quitefine, I HAVE. [too bad for you...]

Hello? You have failure to comprehend what I wrote? Of
course you've failed. Tsk, tsk, tsk, OTHERS have written
and said for decades that "those darn kids just don't
LISTEN to us!" OTHERS have written and said that. :-)

So, Jimmy/Quitefine, ARE YOU A PARENT?

And why is parenthood some kind of "essential" in radio?

Gosh, I've asked before in here..."does one now have to
present a medical doctor's statement of prospective
licensee's sperm count" to VEs? Does one?

I don't think so. The FCC didn't ask for that in 1956
when I got my first (commercial) radio operator license.

You are very wrought-up on this subject of "parenting."
Why? Why for discussion of amateur radio policy?

Oh, I see now...you want to REVIVE and old newsgroup
argument of 1998 and hope to "win" this go-around again!
Yes, you are still (apparently) nursing several severe
"wounds" suffered in newsgroup word "battle." Tsk. Get
medical help. Go see the Sturgeon General, Doc Stebie.

>Have you ever been a teacher of young people, Len?

An invited speaker at a couple of local "magnet" schools,
Jimmie. Went over rather well. You see, I've had some
experience speaking before groups and can "gauge" an
audience's attention while speaking. That comes from
practice. "Young people" (teen-agers to everyone else)
is just another group having different likes/dislikes
than adults.

>You don't seem to be able to do any teaching here, though, Len.

Tsk, tsk. Some groups remain UNABLE to learn, heads of incredible density bone, anchored in their brainwashed BELIEFS. NOBODY human can get through to them... :-)

>You get insulted by someone disagreeing with you, or pointing
>out your mistakes.

Why do you keep beating the mother of your children, parent Jimmie? :-)

>So? You've never been a radio amateur, either.

It's very difficult for me to step down to what YOU call "amateur radio." Been too long in grown-up commercial radio and electronics.

Tsk, tsk. A radio does NOT operate by different laws of physics because some government agency designates it as "amateur." Didn't you learn that in Ivy school?

>And they don't require any license by the user. They're almost
>totally automatic in operation, too. Is that what
>you think amateur radio should be?

Tsk, tsk. You are "loading' a question again. :-) You keep saying something like it is "improper" (or whatever you have in mind) for me to tell any radio amateur what to do or "what amateur radio should be. If I say anything remotely associated with such an act, you mount your figurative high horse and gallop off in another (misdirection) to do some kind of figurative battle! Remarkable desire to "do battle" by someone who never did any military service.

My argument in here is simply to eliminate the morse code test for a radio license. I have NO desire to "tell you what to do," and such a thing you would never obey anyway...NO ONE can tell Jimmie what to do! :-)

Jimmie boy, what YOU want in automatons is for every ham to emulate a modem so that they can automatically decode morse code. You are very, very (almost unnaturally) firm on that, giving all sorts of specious "reasons" for that "entrance exam" into narrow amateur bands below 30 MHz.

>> Using cell phones as a "hobby" is wrong.
>
>Says who?
>
> Semi-private communications is a social group act, not a hobby.
>
>What in the world does that mean?

Tsk, Tsk, TSK! Jimmie implies he has "parenting skills" and
yet he is BLIND to what modern-day teeners DO in their peer
group activities? :-)

"TXT-ing" is a modern FAD amongst teeners, the ability to send
little notes to another, hardly any restrictions, and much
easier to do than the old way with actual paper. It is a FUN
social act for them, a minor rebelliousness against old strict
rules of behavior in class, in assemblies, in any area where
they were not allowed to pass paper notes back and forth. They
can "TXT" with one hand, less observable by teachers or other
adults. It is NOT a "hobby" Jimmie, it is just a thing they DO.

>You sound like a powerboater trying to ruin the fun of sailboaters.

Why are you trying to be Admiral-in-Charge of water traffic?

Jimmie, this is a newsgroup for amateur radio policy. Sailing
and power-boat driving is quite another newsgroup.

>Yep, we see your same old tired wornout attitudes here again
>and again, Len...;-)

I'm not the one bringing up my 6-year-old comment on amateur
radio minimum age. YOU are. You've done that several times,
twice now after I've said I had not pursued the matter since
1999.

>> The paradigms of yesterday just DON'T apply today.
>
>Some of them do. Or do you insist on a continuous techno-cultural
>revolution?

Are you still beating your wife? :-)

>Look at the contest between the text messagers and the Morse Code
>operators. The "tribe" (the audience) was so sure the world-champion
>text messagers would be faster than the Morse Code operators in their
>historic costumes. Yet the Morse Code ops, going about 1/3 world
>record speed, passed the message perfectly, without abbreviations,
>and presented the result in written form before the text messagers
>could even get the message inputted into the 'phone. (They had two
>words to go - "car insurance").

Jimmie, TRY to realize that the real "tribe" is the entire
world of radio communications, and has been ever since 1896.
That "tribe" has DROPPED morse code in favor of other, better,
faster, more reliable communications modes for decades. Even
the international maritime distress and safety frequency of
500 KHz was supplanted by GMDSS by the REAL mariners themselves.
There's no need for morsemanship on 500 KHz to avoid a repeat of
the Titanic disaster. Air traffic has dropped morse on long,
over-water flights; sea traffic now uses HF SSB voice and TORs
for data; the military long since dropped morse code for

communications purposes. In the USA all you have left is some AUTOMATIC ID machines at VORs and VORTACs and a few LF beacons that few pilots actually use over land. AUTOMATIC machines, Jimmie, which can endlessly generate the ID in morse code.

NOBODY is considering "TXT-ing" as any sort of replacement for modern data modes for written communications. That "test" on an Entertainment show was deliberately staged to poke fun at this relatively recent FAD of "TXT-ing." People in the Staff of the Tonight Show on NBC at Burbank, CA, have informed me of the intent of that short bit.

Drop the discussion, Jimmie. You haven't "won" any sort of argument...rather you've helped FABRICATE a non-issue.

>And it's rather surreal to see you lecturing and posturing on
>"young'uns in Ham Radio" when it was *you* who suggested to FCC that
>*no-one* below the age of 14
>years be allowed to obtain *any* class of amateur radio license.

Jimmie boy, STOP bringing up that six-year-old argument which (I perceive) you tried to use as some kind of "character flaw." Hans Brakob floated the first argument on that in here, we argued on it, but YOU have to keep bringing it up, bringing it up, bringing it up. It's like you have intellectual bullemia. If you must vomit so much please do it someplace else.

YOU are NOT going to "win" OLD arguments that you didn't "win" some time ago. Quit acting the age of that old Comment of mine on FCC 98-143. Two little tykes of 6 years got their amateur radio licenses (Novice and Technician) plus got their pictures taken with a kindly, grandfatherly-looking VE who "administered" their tests. It was on the ARRL web page news some time ago. LET IT GO.

UNQUOTE

I'll tell your what, Todd. I'll give you until 3PM central June
1st to figure out who it was before I call the Taylorville Police and
file a criminal complaint.

If need be, I'll drive to Taylorville and sign it myself, and I
will bring copies of the posts, headers and all, including this threat.

Get busy.

Again with the misuse of the Tomb of the Unknowns.

Yes, I saw the "Solder", but it's still inappropriate.

I guess the Tomb takes on a different meaning for those of us who actually SERVED with others while IN combat. Monuments to American war dead take on a different meaning when you actually KNOW men who died and where there when it happened...not just read about it in a report somewhere.

But you go right on ahead expressing your "free speech" and your "right" to parody such things...and I'll go on calling you for what I think you are for doing it...

Putz.

> SUE THE FCC FOR BELIEVING YOUR SORRY ###ES, AND HEY YOU CAN QUOTE ME ON
> THAT...#####!

We will.

And if the FCC "believes" the tape, it will only be after they run
it through electronic forensics to determine that it IS a legitimate
tape...so then you'll be up against the wall, Todd.

Go ahead..."sue"...! ! ! ! ! !

"...speaking before groups..."

An invited speaker to an organized class presentation is NOT child
rearing.

> >So? You've never been a radio amateur, either.
>
> It's very difficult for me to step down to what YOU call
> "amateur radio." Been too long in grown-up commercial
> radio and electronics.

Oh! It's a "step down" now...

In many other posts you've 'expressed" alleged admiration for
Amateur Radio...especially for your ham buddy best man and Gene in NJ.

Were you lying then, or lying now?

> Tsk, tsk. A radio does NOT operate by different laws of
> physics because some government agency designates it as
> "amateur." Didn't you learn that in Ivy school?

Who, Lennie, other than you, has ever suggested otherwise in this
forum?

> My argument in here is simply to eliminate the morse code test
> for a radio license. I have NO desire to "tell you what to do,"
> and such a thing you would never obey anyway...

WHAT AN ABSOLUTE AND AUDACIOUS LIE!

> adults. It is NOT a "hobby" Jimmie, it is just a thing they DO.

Ahhhhhhhhhhhhhhhhhhh...I see!

So...teenaagers sending messages by Morse Code is a
hobby...Teenagers sending messages by text message is "...just a thing
they do..."

> Are you still beating your wife?

Are you still lying to yours?

> Jimmie, TRY to realize that the real "tribe" is the entire
> world of radio communications, and has been ever since 1896.
> That "tribe" has DROPPED morse code in favor of other, better,

There's no "tribes" on the electromagnetic spectrum save for
licenses issued to recognized Tribal agencies by the FCC.

> Even the international maritime distress and safety frequency of
> 500 KHz was supplanted by GMDSS by the REAL mariners themselves.

Ahem...How is this pertinent to Amateur radio?

> Drop the discussion, Jimmie. You haven't "won" any sort of
> argument...rather you've helped FABRICATE a non-issue.

Hey Jim...

This is Lennie's way of saying "Shut up...I'm embarraased enough
already..."

> >And it's rather surreal to see you lecturing and posturing on
> >"young'uns in Ham Radio" when it was *you* who suggested to FCC that

You have been a parent, Len? That's news - you've told us
all about your life and never mentioned that.

> Hello? You have failure to comprehend what I wrote?

No, I understood it well.

> Of
> course you've failed. Tsk, tsk, tsk, OTHERS have written
> and said for decades that "those darn kids just don't
> LISTEN to us!" OTHERS have written and said that. :-)

And you agree with them - even though you have no experience
as a parent. You're lecturing others on things you have no
real experience with.

> So, Jimmy/Quitefine, ARE YOU A PARENT?

Suppose I am, Len - would that cause your behavior to change in a
positive way? Or would you simply use that information to make fun of
me?

I suspect the latter.

> And why is parenthood some kind of "essential" in radio?

It's not. But when you lecture the newsgroup on "young'uns in ham
radio", your lack of experience is relevant, don't you think?

You make a big deal about others' lack of military service or
other experience - now the shoe is on the other foot.

>
> Gosh, I've asked before in here..."does one now have to

When you were 24 years old....
>
> You are very wrought-up on this subject of "parenting."
> Why? Why for discussion of amateur radio policy?

Look at the subject line.
>
> Oh, I see now...you want to REVIVE and old newsgroup
> argument of 1998 and hope to "win" this go-around again!

I won before and I'll win again. But it goes back farther than
1998 and continues into the present.

For example, back in 1996 you wrote:

"I've always had trouble with integrating "youngsters" in what is a
primarily _adult_ skill/technique recreational activity."

http://groups-beta.google.com/group/rec.radio.amateur.policy/msg/913159af9e8f2526?output=g
plain

That pretty much says it all - *you* have a problem including young
people. The surreal part is that you're neither a parent nor a radio
amateur.

> Yes, you are still (apparently) nursing several severe
> "wounds" suffered in newsgroup word "battle."

Not me. I'm not the one shouting, tsking and calling people names.

> >Have you ever been a teacher of young people, Len?
>
> An invited speaker at a couple of local "magnet" schools,

In other words, no. You gave some talks (subject unknown)
but as far as actually teaching a course, where the results
could be measured (testing results), you're again talking
without experience.
>
> >You don't seem to be able to do any teaching here, though, Len.

>
> It's very difficult for me to step down to what YOU call
> "amateur radio."

Ah, there you are. Talking down to the audience.

> Been too long in grown-up commercial
> radio and electronics.

Yet you seek to ban young people from amateur radio - of
which you are not a part.

Your answer indicates what many have long suspected: that you
expect to be instantly recognized as an expert without having
to meet the requirements for a license.

> Tsk, tsk. A radio does NOT operate by different laws of
> physics because some government agency designates it as
> "amateur."

So what? "Physics" isn't the only consideration.

Do you think the rules for the amateur radio service should be the same
as for other radio services?

> >And they don't require any license by the user. They're almost
> >totally automatic in operation, too. Is that what
> >you think amateur radio should be?
>
> Tsk, tsk. You are "loading' a question again. :-)

How? You brought up cell phones, not me.

> You keep
> saying something like it is "improper" (or whatever you
> have in
> mind) for me to tell any radio amateur what to do or "what
> amateur radio should be.

That's simply not true, Len.

I say it's "surreal".

You can lecture and posture all you want. I've never told you
to shut up, either directly or indirectly. But you have told
me and others to do so. Like your classic "feldwebel post"
to K8MN...

> If I say anything remotely associated
> with such an act, you mount your figurative high horse and
> gallop off in another (misdirection) to do some kind of
> figurative battle! Remarkable desire to "do battle" by
> someone who never did any military service.

See? There you go..

>
> My argument in here is simply to eliminate the morse
> code test for a radio license.

Then why do you go off on so many tangents? Like the age-
requirement thing?

> I have NO desire to "tell you what to do,"

HAW! That's a good one!

You've told me "what to do" many times here. Even in this very
post.

> and such a thing you would never obey anyway...NO
> ONE can tell Jimmie what to do! :-)

> Jimmie boy,

Why do you call me that, Len?

Do you want to be addressed in similar manner?

Or is it just your desire to insult and demean?

> what YOU want in automatons is for every ham to
> emulate a modem so that they can automatically decode morse
> code.

A modem cannot understand Morse Code, Len.

> You are very, very (almost unnaturally) firm on that,
> giving all sorts of specious "reasons" for that "entrance
> exam" into narrow amateur bands below 30 MHz.

Why is a basic test of Morse Code skill such a problem for
you, Len?

> >> Using cell phones as a "hobby" is wrong.
> >
> >Says who?
> >
> > Semi-private communications is a social group act,

> group activities? :-)

Your writing is simply unclear, Len.
>
> "TXT-ing" is a modern FAD amongst teeners, the ability
> to send
> little notes to another, hardly any restrictions, and much
> easier to do than the old way with actual paper.

Guess what, Len - people of all ages do text messaging. It's
not just teenagers. For example, if I know a coworker is in a meeting,
and needs some piece of information, I'll send a text message rather
than call. Much less intrusive and the information is already in text
form. Been doing that for *years*.

> It is a FUN
> social act for them, a minor rebelliousness against old
> strict
> rules of behavior in class, in assemblies, in any area where
> they were not allowed to pass paper notes back and forth.

It's not acceptable behavior in class. Not in the schools I know,
anyway.

> They
> can "TXT" with one hand, less observable by teachers or other
> adults.

Do you think that's a good way to spend class time, Len? Did the kids
text message when you were giving your lecture?

> It is NOT a "hobby" Jimmie,

Of course it's a hobby - they do it for fun, it's not required, and
they don't get paid for it. Isn't that the definition?

What's your defintion of "hobby", Len?

> it is just a thing they DO.

You wrote:

"Using cell phones as a "hobby" is wrong."

But you don't say why.
>
> >You sound like a powerboater trying to ruin the fun of
> >sailboaters.
>

> Jimmie, this is a newsgroup for amateur radio policy.
> Sailing
> and power-boat driving is quite another newsgroup.
>
It's an analogy, Len. Sailboats used to be the dominant way
of water transport. Navies used sail, cargo ships used sail,
fishing vessels, explorers, etc. Just like Morse Code.

Now sail has all but disappeared, except in a few special applications
and in "hobby" (pleasure) boating.

Just like Morse Code.

See the analogy?

> >Yep, we see your same old tired wornout attitudes here again
> >and again, Len...;-)
>
> I'm not the one bringing up my 6-year-old comment on amateur
> radio minimum age. YOU are. You've done that several times,
> twice now after I've said I had not pursued the matter since
> 1999.

It's more than your comments to FCC in 1999, Len. There's also your
charges of fraud against ARRL and some VEs in the licensing of young
children. There's your posts against those of us who were licensed at
young ages (13 in my case). There's your
post where you wrote:

"I've always had trouble with integrating "youngsters" in what is a
primarily _adult_ skill/technique recreational activity."

http://groups-beta.google.com/group/rec.radio.amateur.policy/msg/913159af9e8f2526?output=g
plain

And there's the fact that you don't have a single example of *any*
problems caused by the licensing of young people, yet
you would deny a license to *anyone* under the age of 14.

Why?

> >> The paradigms of yesterday just DON'T apply today.

So?

> That "tribe" has DROPPED morse code in favor of other,
> better,
> faster, more reliable communications modes for decades.

Not true, Len. The maritime services were still using Morse
Code extensively as recently as 1997. Less than a decade
ago.

Besides - *hams* still use Morse Code extensively.

> Even
> the international maritime distress and safety frequency of
> 500 KHz was supplanted by GMDSS by the REAL mariners
> themselves.

No. It was replaced by the ship owners who wanted to save money on crew
costs.

> There's no need for morsemanship on 500 KHz to avoid a
> repeat of the Titanic disaster.

So what? Amateurs don't use 500 kHz.

> Air traffic has dropped morse on long,
> over-water flights; sea traffic now uses HF SSB voice and
> TORs
> for data; the military long since dropped morse code for
> communications purposes. In the USA all you have left is
> some
> AUTOMATIC ID machines at VORs and VORTACs and a few LF
> beacons
> that few pilots actually use over land. AUTOMATIC machines,
> Jimmie, which can endlessly generate the ID in morse code.

Just like the way sailboats have been mostly replaced by power boats.

> NOBODY is considering "TXT-ing" as any sort of replacement
> for
> modern data modes for written communications.

So? That's not the point.

> That "test" on
> an Entertainment show was deliberately staged to poke fun at
> this relatively recent FAD of "TXT-ing." People in the Staff
> of the Tonight Show on NBC at Burbank, CA, have informed me > of the intent of that short bit.

The fact is that the Morse Code operators proved the "tribe" to be wrong.

> Drop the discussion, Jimmie.

You previously wrote:

"I have NO desire to "tell you what to do,""

but now you're doing just that!

You're telling me to shut up, Len.

> You haven't "won" any sort of
> argument...rather you've helped FABRICATE a non-issue.

Wasn't me that told FCC to deny licenses to anyone under 13. It isn't me that has "trouble with integrating "youngsters" in what is a primarily _adult_ skill/technique recreational activity."

It isn't me accusing VEs of fraud.

It's *you*, Len.

> >And it's rather surreal to see you lecturing and posturing on
> >"young'uns in Ham Radio" when it was *you* who suggested to
> > FCC that
> >*no-one* below the age of 14
> >years be allowed to obtain *any* class of amateur radio
> >license.
>
> Jimmie boy,

There you go again. Why do you call names like that, Len? Is there a reason you can't just call me "Jim", the way I call you "Len"?

> STOP bringing up that six-year-old argument which
> (I perceive) you tried to use as some kind of "character
> flaw."

There you go, telling me to shut up. Again.

I bring up the issue because it shows your true attitude about "young'uns in ham radio". (see the subject line). It's right on the subject.

> Hans Brakob floated the first argument on that in here, we
> argued on it, but YOU have to keep bringing it up, bringing > it up, bringing it up.

Why not? You haven't admitted that you were wrong in the first
place about age limits.

Besides, you bring up the same stuff over and over again. Much
more than I. Like your experience at ADA....

> It's like you have intellectual bullemia.
> If you must vomit so much please do it someplace else.

In other words, you want me to shut up.

> YOU are NOT going to "win" OLD arguments that you
> didn't "win" some time ago.

So you think age limits for a ham license are a good idea?

Why?

> Quit acting the age of that old Comment of mine
> on FCC 98-143.

> Two little tykes of 6 years got their amateur
> radio licenses (Novice and Technician) plus got
> their pictures
> taken with a kindly, grandfatherly-looking VE
> who "administered"
> their tests. It was on the ARRL web page news some time ago.

And you said there must have been fraud involved. You accused ARRL and
the VEs involved of dishonesty. Right here. That's a fact. Shall I
repost those claims?

> LET IT GO.

Why? So the truth is ignored?

Fun fact, Len: Recently, a six-year-old earned her *General* class
license. Code test and all. It was on the ARRL webpage.

I've done a couple of pitches to Boy Scouts touring our Emergency Management Office in a quest of merit badges. As part of the pitch we give them a tour of the ham radio area, HF, VHF, UHF, packet, scanners, 3 computers networked together. We simulate a weather drill with check in's from 20 - 30 miles away. We make HF contacts to show them long distance comms.

I'd say about one quarter to one fifth of the audience seems truely interested in ham radio. The rest could care less.Just something they sit thru to get a merit badge.

Thinking about the hams in our local club and ARES groups I come up with the following of why people become hams or ARES members.

They are into the technology.
They do some level of it as a career.
They use it as a means to keep in touch with far flung friends and family who are also hams.
They want to help their community and see ham radio as a way to make that happen, sometimes becuase no other option exsists due to health concerns.
They see it as a challenge that they want to conquer.
Mom and / or Dad are hams and they got pushed into it.

I know, my words strike at your oh so fragile ego, too bad your
kids will be in years of psychotherapy because you molested them.

> But another letter did.

But you were referring to the retest letter. Loser! Or are you
too goddamned senile to follow along?

He still passed his retest, you can't even get the Extra. That
morse code requirement too hard for you?

>(more whining)

> Never had a letter from Riley

Yes, you have.
Poor Butt Cornholer, your kids and grandkids who are always in
trouble with the law have to stay close to you to sponge off of
you. Not that your SSI for your mental illness brings in that
much, huh? Or could it be because they have "power of attorney"
over your affairs because you are a senile old dumbfuck?
BTW, Marie didn't leave Roger any house by the creek, since the
house was Roger's, dumbass!

>
> Ten-Tech? (whining and sniveling flushed)

Poor Butt cornholer, has that Ten-Tech equipment. Can't afford
the good equipment, but then he always held "unskilled labor"
type of employment.
He only flies model airplanes and thinks that gives hima real
pilot's license instead of one out of a crackerjack box.

> > Fly those model airplanes and pretend you have a pilot's
license
> > lately, shit for brains?
> >
BHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAH
> > AHAHA!!!!!!
>
> Poor wogie,

Poor butt cornholer, has an obsolete ham license and an
imaginary pilot's license. I know you don't have a pilot's
license, liar! Caught you in another lie again. Nice to see you
still have your cocksucking lisp,though.
BWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA!!
!!!
Poor Butt Cornholer, when Riley makes him retest he'll be
downgraded to General, since they made the Advanced an obsolete
license. But Butt Cornholer couldn't even pass the no code
technician license exam if he was retested today.

Well...that's not completely true, Jim...

Brian and Lennie have both shared warm and fuzzy comments with
him. Not really "back(ing) (him) up", but certainly encouraging to an
otherwise clueless loser.

But then you have to consider what Lennie/Brian represent. Not
much of it good.

You are going to charge somebody with libel? Wasn't it you who keeps
saying the I d/l kiddy porn. You libeled me as well as accused me of a
felony!
You, the illiterate idiot has the nerve to call somebody a retard?
Somebody that's retarded is handicapped, you on the other hand are a
moronic idiot.
So toad, I have the tape, have your lawyer call!

2022. An idea for the toad show

Newsgroup: rec.radio.amateur.policy
Date: 2005-06-01 16:13:46 UTC
From: KC8GXW <KC8GXW@centurytel.net>
Message-ID: <89OdnadirJggQwDfRVn-gQ@centurytel.net>
Source record: 109155

I don't know the rules but if it's legal, why not put your show on ATV on 220 mhz? You just might create some interest in 220 as well as amateur radio and Amateur Television.

You just couldn't bring yourself to answer the question, could you
Leonard? Jim didn't ask if you'd been a public speaker.

>>You don't seem to be able to do any teaching here, though, Len.
>
>
> Tsk, tsk. Some groups remain UNABLE to learn, heads of
> incredible density bone, anchored in their brainwashed
> BELIEFS. NOBODY human can get through to them... :-)

...and some people are simply unable to become good teachers. They
simply have no knack for it. You seem to fall into that category.
Alienating the students doesn't make for an attentive class.

>>So? You've never been a radio amateur, either.
>
>
> It's very difficult for me to step down to what YOU call
> "amateur radio." Been too long in grown-up commercial
> radio and electronics.

There's part of your problem, Len. The condescension isn't going to win
you many points. Many of us here have been professionally involved in
radio and electronics *and* we're also hams. You're a stuffed shirt and
a non-ham.

> Tsk, tsk. A radio does NOT operate by different laws of
> physics because some government agency designates it as
> "amateur." Didn't you learn that in Ivy school?

You might have a point if all there was to amateur radio was sitting
around discussing radio theory.

>>And they don't require any license by the user. They're almost
>>totally automatic in operation, too. Is that what
>>you think amateur radio should be?
>

> My argument in here is simply to eliminate the morse code test
> for a radio license. I have NO desire to "tell you what to do,"
> and such a thing you would never obey anyway...NO ONE can tell
> Jimmie what to do! :-)

1. You want to eliminate morse testing in an endeavor in which you are
not a participant.

2. You don't want to tell anyone what to do.

Those two things look to be mutually exclusive.

> I'm not the one bringing up my 6-year-old comment on amateur
> radio minimum age. YOU are. You've done that several times,
> twice now after I've said I had not pursued the matter since
> 1999.

Neither have you disavowed your comment. You've not followed up to the
FCC with an "I was wrong about a minimum age for entry into amateur
radio". Not pursuing something further isn't the same as reversing your
views.

>>> The paradigms of yesterday just DON'T apply today.
>>
>>Some of them do. Or do you insist on a continuous techno-cultural
>>revolution?

I'm immediately suspicious of anyone who ever uses the term "paradigm".

>

I'm sure the Tonight Show staff check in with you from time to time,
just to make certain that they've got their ducks in a row.

> Drop the discussion, Jimmie. You haven't "won" any sort of
> argument...rather you've helped FABRICATE a non-issue.

Actually, Leonard, I think Jim has gotten your goat on the issue.

>>And it's rather surreal to see you lecturing and posturing on
>>"young'uns in Ham Radio" when it was *you* who suggested to FCC that
>>*no-one* below the age of 14
>>years be allowed to obtain *any* class of amateur radio license.
>

>
> Jimmie boy, STOP bringing up that six-year-old argument which

Izzat one of your "Go away" lines, Leonard? I'm sure you'd like folks to stop bringing up things you've written which appear to have been boneheaded moves.

> YOU are NOT going to "win" OLD arguments that you didn't "win"

> LET IT GO.

You intimated at the time that they must have cheated in order to obtain their licenses. You stated that you didn't believe that "CHILDREN" should be permitted to operate amateur radio stations without supervision. You commented to the FCC that their should be a minimum entry age for amateur radio even though 1) there is no record of a problem with adolescent licensees and 2) you have nothing whatever to do with amateur radio.

Why don't you know the rules? Didn't you study for your give away Tech
ticket? Apparantly you missed the part that ATV is only authorized in the
440 band and above. You see it is 6 Mhz wide, and their ain't enough to
play on 222Mhz.

I don't know the rules for ATV for my free tech license, which by the
way was General theory, But I guess he can play ATV on 440.
If I was going to do RTTY, packet, ATV, or any mode, I'll look up the
rules before I do it! Heck, I have a small brain amd I don't need to
know rules for stuff I'm not doing!

Gee, Quitefine, I HAVE. [too bad for you...]

Hello? You have failure to comprehend what I wrote? Of
course you've failed. Tsk, tsk, tsk, OTHERS have written
and said for decades that "those darn kids just don't
LISTEN to us!" OTHERS have written and said that. :-)

So, Jimmy/Quitefine, ARE YOU A PARENT?

And why is parenthood some kind of "essential" in radio?

Gosh, I've asked before in here..."does one now have to
present a medical doctor's statement of prospective
licensee's sperm count" to VEs? Does one?

I don't think so. The FCC didn't ask for that in 1956
when I got my first (commercial) radio operator license.

You are very wrought-up on this subject of "parenting."
Why? Why for discussion of amateur radio policy?

Oh, I see now...you want to REVIVE and old newsgroup
argument of 1998 and hope to "win" this go-around again!
Yes, you are still (apparently) nursing several severe
"wounds" suffered in newsgroup word "battle." Tsk. Get
medical help. Go see the Sturgeon General, Doc Stebie.

>Have you ever been a teacher of young people, Len?

An invited speaker at a couple of local "magnet" schools,
Jimmie. Went over rather well. You see, I've had some
experience speaking before groups and can "gauge" an
audience's attention while speaking. That comes from
practice. "Young people" (teen-agers to everyone else)

is just another group having different likes/dislikes
than adults.

>You don't seem to be able to do any teaching here, though, Len.

Tsk, tsk. Some groups remain UNABLE to learn, heads of
incredible density bone, anchored in their brainwashed
BELIEFS. NOBODY human can get through to them... :-)

>You get insulted by someone disagreeing with you, or pointing
>out your mistakes.

Why do you keep beating the mother of your children,
parent Jimmie? :-)

>So? You've never been a radio amateur, either.

It's very difficult for me to step down to what YOU call
"amateur radio." Been too long in grown-up commercial
radio and electronics.

Tsk, tsk. A radio does NOT operate by different laws of
physics because some government agency designates it as
"amateur." Didn't you learn that in Ivy school?

>And they don't require any license by the user. They're almost
>totally automatic in operation, too. Is that what
>you think amateur radio should be?

Tsk, tsk. You are "loading' a question again. :-) You keep
saying something like it is "improper" (or whatever you have in
mind) for me to tell any radio amateur what to do or "what
amateur radio should be. If I say anything remotely associated
with such an act, you mount your figurative high horse and
gallop off in another (misdirection) to do some kind of
figurative battle! Remarkable desire to "do battle" by someone
who never did any military service.

My argument in here is simply to eliminate the morse code test
for a radio license. I have NO desire to "tell you what to do,"
and such a thing you would never obey anyway...NO ONE can tell
Jimmie what to do! :-)

Jimmie boy, what YOU want in automatons is for every ham to
emulate a modem so that they can automatically decode morse
code. You are very, very (almost unnaturally) firm on that,
giving all sorts of specious "reasons" for that "entrance exam"
into narrow amateur bands below 30 MHz.

>> Using cell phones as a "hobby" is wrong.
>
>Says who?
>
> Semi-private communications is a social group act, not a hobby.

>
>What in the world does that mean?

Tsk, Tsk, TSK! Jimmie implies he has "parenting skills" and
yet he is BLIND to what modern-day teeners DO in their peer
group activities? :-)

"TXT-ing" is a modern FAD amongst teeners, the ability to send
little notes to another, hardly any restrictions, and much
easier to do than the old way with actual paper. It is a FUN
social act for them, a minor rebelliousness against old strict
rules of behavior in class, in assemblies, in any area where
they were not allowed to pass paper notes back and forth. They
can "TXT" with one hand, less observable by teachers or other
adults. It is NOT a "hobby" Jimmie, it is just a thing they DO.

>You sound like a powerboater trying to ruin the fun of sailboaters.

Why are you trying to be Admiral-in-Charge of water traffic?

Jimmie, this is a newsgroup for amateur radio policy. Sailing
and power-boat driving is quite another newsgroup.

>Yep, we see your same old tired wornout attitudes here again
>and again, Len...;-)

I'm not the one bringing up my 6-year-old comment on amateur
radio minimum age. YOU are. You've done that several times,
twice now after I've said I had not pursued the matter since
1999.

>> The paradigms of yesterday just DON'T apply today.
>
>Some of them do. Or do you insist on a continuous techno-cultural
>revolution?

Are you still beating your wife? :-)

>Look at the contest between the text messagers and the Morse Code
>operators. The "tribe" (the audience) was so sure the world-champion
>text messagers would be faster than the Morse Code operators in their
>historic costumes. Yet the Morse Code ops, going about 1/3 world
>record speed, passed the message perfectly, without abbreviations,
>and presented the result in written form before the text messagers
>could even get the message inputted into the 'phone. (They had two
>words to go - "car insurance").

Jimmie, TRY to realize that the real "tribe" is the entire
world of radio communications, and has been ever since 1896.
That "tribe" has DROPPED morse code in favor of other, better,
faster, more reliable communications modes for decades. Even
the international maritime distress and safety frequency of
500 KHz was supplanted by GMDSS by the REAL mariners themselves.
There's no need for morsemanship on 500 KHz to avoid a repeat of

the Titanic disaster. Air traffic has dropped morse on long,
over-water flights; sea traffic now uses HF SSB voice and TORs
for data; the military long since dropped morse code for
communications purposes. In the USA all you have left is some
AUTOMATIC ID machines at VORs and VORTACs and a few LF beacons
that few pilots actually use over land. AUTOMATIC machines,
Jimmie, which can endlessly generate the ID in morse code.

NOBODY is considering "TXT-ing" as any sort of replacement for
modern data modes for written communications. That "test" on
an Entertainment show was deliberately staged to poke fun at
this relatively recent FAD of "TXT-ing." People in the Staff
of the Tonight Show on NBC at Burbank, CA, have informed me of
the intent of that short bit.

Drop the discussion, Jimmie. You haven't "won" any sort of
argument...rather you've helped FABRICATE a non-issue.

>And it's rather surreal to see you lecturing and posturing on
>"young'uns in Ham Radio" when it was *you* who suggested to FCC that
>*no-one* below the age of 14
>years be allowed to obtain *any* class of amateur radio license.

Jimmie boy, STOP bringing up that six-year-old argument which
(I perceive) you tried to use as some kind of "character flaw."
Hans Brakob floated the first argument on that in here, we
argued on it, but YOU have to keep bringing it up, bringing it
up, bringing it up. It's like you have intellectual bullemia.
If you must vomit so much please do it someplace else.

YOU are NOT going to "win" OLD arguments that you didn't "win"
some time ago. Quit acting the age of that old Comment of mine
on FCC 98-143. Two little tykes of 6 years got their amateur
radio licenses (Novice and Technician) plus got their pictures
taken with a kindly, grandfatherly-looking VE who "administered"
their tests. It was on the ARRL web page news some time ago.
LET IT GO.

What part of that is not accurate, Leo? Maybe you are who you
say you are, and maybe you aren't. Maybe "Arf!" is who he says
he is - or maybe he ain't.
>
> Hmmm - let's see here....I wasn't agreeing with you, so perhaps > I am not legitimate.

Not at all. Your lack of verifiable ID means there's room for
doubt. Same for "Arf" or any other anonymous poster.

> Yet here you make a case for Arf! Arf!'s existance
> because he does agree with you.

There's as much reason to doubt his claims as there is to doubt
yours, Leo. And as little!

Please note that Len insists on calling "Arf!" names and comparing
him to Nigerian bank scammers, but does not do the same for
those who agree with him.

In addition, Len has posted here under a variety of screen names
(like "averyfine" and "averyfineman") often without any real ID.

If you want to remain anonymous, that's fine with me.

Actually, Dave, I'm not trying to get anyone's goat. The subject is about "young'uns in ham radio", and it's obvious that things like parenting, teaching, and age limits for a license are right on-subject.

> >>And it's rather surreal to see you lecturing and posturing on

The USA has never had such an age limit. Some other countries, like Canada, had them at one time but got rid of them.

> > Jimmie boy, STOP bringing up that six-year-old

It's a "shut up" line, Dave. Not as obvious as the classic "feldwebel post", but that's what it means nonetheless.

> I'm sure you'd like folks

> You intimated at the time that they must have cheated
> in order to obtain their licenses.

IIRC, Dave, the claim was that the children could not
have obtained their licenses honestly - that they
must have gotten some "help" from the VEs. Len
claimed "very mild fraud" in the whole process.

Of course Len wasn't there, doesn't know the people
involved, and bases his opinion on what some teacher
told him about the reading skills of a six-year-old.
That the children might have passed the tests honestly
was dismissed by Len.

btw, a six-year-old earned her General a year or so ago.

How the example of the six-year-olds translates into an
age limit of 14 has never been explained.

The fact is that if someone gets enough right answers on
the written test, they get the credit.

> You stated that you didn't believe that "CHILDREN"
> should be permitted to operate amateur radio stations without
> supervision.

That would include folks like me as a Novice. With my homebrew
transmitter.

Why would Len want to keep young folks out of ham radio?

Here's one possibility:

Back in 1996, ARRL had Readex conduct a survey of 1500 amateurs.
One results display showed the support for code testing in
relation to the age of the amateur responding to the survey.

The group that showed the most positive support for code testing
(85%!) was the *youngest* age group.

2041. Re: ARS License Numbers

Newsgroup: rec.radio.amateur.policy
Date: 2005-06-02 01:15:48 UTC
From: N2EY@AOL.COM
Message-ID: <1117674948.514536.73260@f14g2000cwb.googlegroups.com>
Source record: 109174

These are the numbers of current, unexpired amateur licenses held
by individuals on the stated dates:

As of May 14, 2000:

Novice - 49,329
Technician - 205,394
Technician Plus - 128,860
General - 112,677
Advanced - 99,782
Extra - 78,750

Total Tech/TechPlus - 334,254

Total all classes - 674,792

As of May 31, 2005:

Novice - 28,370 (decrease of 20,959)
Technician - 268,575 (increase of 63,181)
Technician Plus - 49,098 (decrease of 79,762)
General - 136,581 (increase of 23,904)
Advanced - 76,119 (decrease of 23,663)
Extra - 106,707 (increase of 27,957)

Total Tech/TechPlus - 317,673 (decrease of 16,581)

Total all classes - 665,450 (decrease of 9,342)

Note that these totals do not include licenses that
have expired but are in the grace period. They also
do not include club, military, RACES or other
station-only licenses.

Note also that effective April 15, 2000, new Novice, Technician Plus or
Advanced licenses are no longer issued, and that all existing
Technician Plus licenses are being renewed as Technician.

> too goddamned senile to follow along?

Read it and weep wogie, if you can't read it, get the six year old next door to read it to you and be sure and don't molest him as you would like to do.

< GLENDALE, WV: The FCC sent a Warning Notice November 9, 1999, to General licensee Roger L. Wiseman, KC8JBO, citing evidence that the licensee had been "deliberately and maliciously interfering with the radio operations of other licensed amateurs" on 20 meters. "This interference has occurred at various times in the last several months and includes broadcasting music and other unidentified transmissions," said a letter from FCC Special Counsel for Amateur Radio Enforcement Riley Hollingsworth. Hollingsworth warned that continued operation of the type described could result in a fine or license revocation proceeding, and he requested that the licensee contact him to discuss the allegations. >

You were caught redhanded by Riley and the boys causing malicious interference on 20 meters.
Poor fatboy two-test wogie, had to retake the test because the best he can do on ham radio is jam others signals.
HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAH!!!! What a pathetic POS loser.

>
> He still passed his retest, you can't even get the Extra.

He, he, he, you keep talking as if you weren't wogie? Can't even stand yourself I suppose. We all know who you are wogie. Tell us why you have to use anon remailers to post to Internet wogie.

So fatboy you got a wellfare extra light ticket. Took it at one of those license give-away VE sessions. No tech knowledge necessary, just memorize a few answers to some questions, kinda like that *restricted* radio operator *permit* you got wogie, no knowledge necessary, just fill out the FCC form. Want to tell us what happened to that 2nd class ticket you claimed to have? Have you figured out how to use the push-to-talk button on the mike so you can use that *restricted permit* wogie, or is that too technical for you. LOLOLOLOLOL!!!

> That
> morse code requirement too hard for you?

Want to meet me on the air sometime for a little code practice wogie.
Can you do 2 wpm yet?

>>Never had a letter from Riley
>
>
> Yes, you have.

So post some proof of this letter two-test fatboy. Either put up or shut up. I have posted proof of your malicious interference letter.

> BTW, Marie didn't leave Roger any house by the creek, since the
> house was Roger's, dumbass!

You wouldn't have anything wogie if Marie hadn't left it to you. Death was probably a relief to her just to be rid of a fat little dysfunctional turd like you.
>

Never ran any Ten Tech equipment wogie. I run Collins gear, far beyond your technical capabilities. You don't even have a clue wogie.

>
> Poor butt cornholer, has an obsolete ham license and an
> imaginary pilot's license. I know you don't have a pilot's
> license, liar!

Ok so prove it little turd head. Tell us what name you search under on the FAA web site that you claim shows I have no pilot certificate. You don't have a clue wogie, but then you never did. Don't you have another appointment with the mental health services again soon?

> Caught you in another lie again.

Caught you in your usual lies again fatboy two-test.

> !!!
> Poor Butt Cornholer, when Riley makes him retest he'll be
> downgraded to General, since they made the Advanced an obsolete
> license. But Butt Cornholer couldn't even pass the no code
> technician license exam if he was retested today.
>

Riley doesn't have and will not have a reason to make me retest wogie, because I don't get on the air and cause malicious interference, broadcast music (maybe you and toddie boy could get together and do a show) and make unidentified transmissions like you do wogie. You see the FCC dosen't make someone retest just for the fun of it, unlike you who

was caught causing malicious interference on 20 meters.

Poor jammer two-test, caught redhanded and spanked really good by the
FCC and had to retest to keep his license. Spank, spank, spank.
HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA!!!!!!!!!!!!!

Boo!!!! Now run and hid behind the curtains again, two-test curtians fatboy.

LOLOLOLOLOLOLOLOLOLOLOLOLOLOLOL!!!!!!!

Several years ago I compared some of the attitudes in here
to old "Twilight Zone" and "Outer Limits" TV shows. Must
have their antennae out too far from their scalps... :-)

>> If you are FOR morse code testing by administrations, you are
>> "legitimate."
>
>> If you are against morse code testing then you are "illegitimate,"
>> "in error," "mistaken," "are a lying penis-head" and have
>> underarm odor.
>
>Heh! or worse..... :)

Tsk, ain't it awful? :-)

Poor Jimmie is all upset by "my name-calling." He is sorely
wounded. I've called him names like James, Jimmy, Jimmie
and he is all a-twitter over those "insults." Tsk, tsk,
he must have thought those are equivalent to "gutless lying
coward", a term used often by another PCTA Extra in
addition to "PUTZ." Maybe I'll just refer to James as
"Your Exhalted Highness" and he will immediately understand
that it does mean His High (and Mighty) Holiness! :-)

Yup, yup, there's a very REAL PCTA Double Standard in here.

These "radio experts" (all through an ability at rapid
morse code) seem to have NO experience with the new
lead-free "solder" which is starting to give electronics
production lines some very real problems with tin dendrites
or "whiskers." [dendrites form out of lead-free solder long
after assembly and can grow to short out traces on PCBs]
Apparently not one of the morsemen (might and macho though
they may be) KNOW about this as part of RoHS.

So, a master super chief calls a play on words nasty things.
TOMB OF THE UNKNOWN SOLDER is a many-level little diatribe.
First, on this lead-free solder according to RoHS rules.
Second, on our beloved "critic" and self-appointed, self-
styled Raddio Kopp - the Avenging Angle of Dearth. Third,
on all the emotion-only image dwellers who get too
overwrought by "approved" stylized patriotic phrases and
Want To KILL (or otherwise do nasty to) all those who do
not knee-jerk to THEIR "approved" patriotism.

Actually, those in the third group are hypocrites, taking
advantage of the medium to be much more than they really
are. Their "patriotism" is primarily for themselves, as
they can "be all that they (wish to) be" in a terrible
parody-travesty of the U.S. Army recruiting phrase.

On entering the U.S. military, recruits are sworn in and
promise to "defend the Constitution of the United States."
Too many in here have substituted ARRL for the United
States. Defending the Constitution of the ARRL (probably
with their lives, if needs be) is NOT national patriotism,
no matter how they rage.

Ask "Quitefine," the nom de pheume of James Miccolis.

"Pheume" is an aliteration, another play on words, a
mixture of 'plume' and 'fume' and 'phew.' :-)

Screum.

A disgraceful parody is a disgraceful parody.

Period.

You dishonor their sacrifice...

But then it's not the first time you've done it...And highly
unlikely that it will be the last.

> Actually, those in the third group are hypocrites, taking
> advantage of the medium to be much more than they really
> are. Their "patriotism" is primarily for themselves, as
> they can "be all that they (wish to) be" in a terrible

No...>>MY<< Patrotism is for the United States, and those who died
in it's defense.

YOUR "patriotism" is about what suits Lennie at that particular
moment.

And it's very ironic to see YOU suuggesting "hypocr(acy)" of
others, Lennie...You wear it like a crown.

> On entering the U.S. military, recruits are sworn in and
> promise to "defend the Constitution of the United States."

And there are those who think that having served the Constitution
means they should be allowed to abuse it. Like you.

> Too many in here have substituted ARRL for the United
> States. Defending the Constitution of the ARRL (probably
> with their lives, if needs be) is NOT national patriotism,

Lennie's not a parent, if we follow his own logic.

Lennie has repeatedly insisted that if I did certain things in the
Armed Forces, then I would be quick to brag about them and discuss them
readily. Since HE does it, EVERYONE must do it too.....

That's not the truth, but that's what Lennie has insisted.

Therefore, that being the case, and Lennie having failed to
discuss his successful procreation and subsequent rearing of offspring,
we can conclude that it never happened.

> > You are very wrought-up on this subject of "parenting."
> > Why? Why for discussion of amateur radio policy?
>
> Look at the subject line.

Lennie claims to be an engineer, but can't seem to make notes of
the "details"...

Lennie doesn't let little things like "no practical experience"
keep him from expressing an "expert" opinion on a great many range of
issues.

> Your answer indicates what many have long suspected: that you
> expect to be instantly recognized as an expert without having
> to meet the requirements for a license.

It was suggested to Lennie that he take some of this energy and
submit a proposal to the FCC to allow "engineers" either a free pass
or some sort of a "bridge" exam to get licensure.

Never did it.

> > Tsk, tsk. A radio does NOT operate by different laws of
> > physics because some government agency designates it as
> > "amateur."
>
> So what? "Physics" isn't the only consideration.

And Lennie's been asked to please show where ANYone, other than
him, has made said issue of it...

No answers.

> Your writing is simply unclear, Len.

It's also assinine.

Would Lennie suggest that because people drive cars and trucks for
"business" that no one may then drive, maintain or collect them for a
"hobby"...?!?!

Lennie has AOL...Just put the word "cell phone" into the "hobbies"
search criteria of the "Members Directory" and watch the hits flow in.

> > "TXT-ing" is a modern FAD amongst teeners, the ability

So Lennie can quit getting his nose rubbed in yet another of his
fallicies.

> Fun fact, Len: Recently, a six-year-old earned her *General* class
> license. Code test and all. It was on the ARRL webpage.

Our local club recently added two new licensees...both 9....No
record, but yet more evidence that there ARE "young 'uns" entering
Amateur Radio.

That's 100% correct.

The subplot here is that the RSGB (now known by many of us as the RSCB)
originally got the idea that deregulation meant that they could take over
licensing and make loads of money. Instead, Ofcom are introducing a free
lifetime licence, and so the Soceity are trying to talk us all out of
saving the 15 pounds a year (US Dollars 27.29 at today's exchange rate
according to XE.com) because they want the money for themselves! I've never
been a member, and it isn't likely that I'll join anytime soon.

Do you mean me, Len?

I'm not "all upset". I just wonder why you do it.

> He is sorely wounded.

Not me.

> I've called him names like James, Jimmy, Jimmie

And a lot more. Always as an insult. Why?

> and he is all a-twitter over those "insults."

I'm just asking *why* you do that, when I call you "Len" or
"Mr. Anderson" or "Anderson" - and nothing else.

> Tsk, tsk,
> he must have thought those are equivalent to "gutless lying
> coward", a term used often by another PCTA Extra in
> addition to "PUTZ."

Let's see....

Steve, K4YZ, calls you those names. I don't, and never have, yet
you somehow think that since he calls you those names, it's
all right for you to call me names.

That doesn't make any sense at all, Len.

> Maybe I'll just refer to James as
> "Your Exhalted Highness" and he will immediately understand
> that it does mean His High (and Mighty) Holiness! :-)

Why not just "Jim" or "N2EY"? Is there some reason you cannot
do that?

> Yup, yup, there's a very REAL PCTA Double Standard in here.

Not really.

What you're saying is that if one "PCTA Extra" calls you a name, you
are somehow justified in calling all "PCTA Extras" names.

That just doesn't make sense.

It's not funny, Len. It's an insult to the honor of the Unknowns.
Your little parody is, as Hans, K0HB describes, revolting and in
very poor taste. I would add disgusting, poorly written, and a
waste of bandwidth.

Most of all, you dishonor *yourself* by writing it and posting it
repeatedly.

Had I written something like that, you'd have a major tantrum.
Heck, you have a tantrum just for a minor disagreement.

> same test you took, dumbass!

So wogie memorized some answers to some test questions, big deal. There was no pool of questions with the answers when I passed my advanced test, just a study guide. I had to know the material, unlike you wogie. And I did it all in front of an FCC examiner, not at some license give-away VE session like you wogie. You get a give-away ticket and now you think you have really accomplished something. You used that *restricted permit* yet wogie? You know, the one you just fill out an FCC form for. Is that the best you can do? What happened to that 2nd class ticket you claimed to have fatboy? Come on curtains boy, fess up. You never had a 2nd class ticket now did you? Just more of your habititual lying. Too dumb to ever pass such a technical exam. HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA!!!!!!!!!!!!!!!!!!!!!!!!!!!!

First you talk as if you aren't wogie, now you say "I can". Make up your drugged shattered mind curtians boy. You don't even know who you are who you are posting to. What a stupid little POS turd.

Same code test I passed for the Advanced. So once again, want to get on the air for some code practice wogie?

>>>>Never had a letter from Riley
>>>
>>>
>>>Yes, you have.
>>

>>So post some proo (whines)

So where is your proof of this letter, two-test curtains fatboy? You can't produce it because it is just another of your lies, chubby. But we have both letters you received from the FCC, the one about your malicious interference on 20 meters that eventutally resulted in your having to retake the test.
LOLOLOLOLOLOLOLOLOLOLOLOLOLOLOLOLOLOL!!!!!!!!!!!!!
>
> No, you haven't. You only posted the ARRL press release about
> it. You fucked up again.
> And it alleged "malicious interference". Of course, one could
> presume with equal validity, the "evidence" was fabricated and
> thus improperly presented. You lose.

Nothing was fabricated, you were caught red-handed by Riley, you are the loser fatboy. Had to retest to keep your license.
HAHAHAHAHAHAHAHAHAHAHA!!!!!!!!!

>
> Oh, yes he does, for you have been jamming Toad's braodcasts.
> It's all on tape.

Sure sure wogie. I haven't even heard the little twerps broadcasts. Glad you also think he is 'broadcasting' which is agianst the rules, but you enjoy violating the rules don't you curtains boy. Is toddieboy your son by any chance? You two are sure a lot alike, both completely stupid and like to violate FCC regulations. At least toddieboy hasn't had to retest to keep his license like you fatboy...yet.

> I know you are too chickenshit to go see Roger in person.
> BWHAHAHAHAHAHAHAHAHAHAHA!!!!!!!!!!!!!!!!!!!!
>

So you can hide behind the curtains like when you were visited once before, two-test wogie? HAHAHAHAHAHAHAHAHAHAHAHAHAHA!!!!!!!!!!.

So when is your next appointment with the mental health services?

> >
> > But you were referring to the retest letter. Loser! Or are
you
> > too goddamned senile to follow along?
>
> Read it (as usual, Cornholer fucks that up)

That's not Roger's retest letter, dumbass. That's the ARRL press
release. Thanks for proving you can't think or read.

Here is the real retest letter, from Google, since it was posted
to the newsgroups (probably by you) before:

July 11, 2000

CERTIFIED MAIL--RETURN RECEIPT REQUESTED

Mr. Roger L. Wiseman

610 Glen Haven Avenue

Glendale, WV 26038-1302

SUBJECT: Amateur Radio license KC8JBO

Dear Mr. Wiseman:

Pursuant to Section 97.519(d)(2) of the Commission's Rules, 47
C.F.R.
Section 97.519(d)(2), the Commission has the authority to re-
administer any
examination element previously administered by Volunteer
Examiners (VE's).
The Commission may either administer the examination itself, or
under the
supervision of a Volunteer Examiner Coordinator (VEC) or VE

designated by
the Commission.

Accordingly, we are requiring you to re-take the General Class Amateur
Examination, (Elements 2, 3(A) and 3(B)) under the supervision of an
American Radio Relay League Volunteer Examiner Coordinator. This examination
must be completed on or before September 11, 2000. The required code speed
that you must demonstrate is 5 words per minute.

Please be prepared to verify your current address and to present a photo
identification. Pursuant to Commission rules, your license will be cancelled
if you do not appear for re-examination. You will be granted an Amateur
Radio license consistent with the elements you pass upon re-examination.

Sincerely,

W. Riley Hollingsworth

Special Counsel, Amateur Radio

Enforcement Bureau

Now, where in the letter does it say "interference" was the reason for the retest?
In fact, the only reason is as follows:

"Pursuant to Section 97.519(d)(2) of the Commission's Rules, 47 C.F.R.
Section 97.519(d)(2), the Commission has the authority to re-administer any
examination element previously administered by Volunteer Examiners (VE's).
The Commission may either administer the examination itself, or under the
supervision of a Volunteer Examiner Coordinator (VEC) or VE designated by
the Commission."

Looks like you lose, as usual.

Oh, and the required code speed at the time of retest was 5 wpm, initially, Roger got his General with
the 13 wpm code speed in 1999.
Such a request is part of the Volunteer Examining program. It

could have been made for any number of
reasons that may have had nothing to do with any of the
addressee's actions. An investigation into the VE group that
gave the test, would be a good example.

Oh, and it isn't a "spank", dumbass. Learn what words mean
before you attempt to use them.
If Roger had his ticket pulled, that would be a "spank", DUMBASS!

> >
> > He still passed his retest, you can't even get the Extra.
>
> He, (more whiny excuses)

Hahahahahaha..keep pretending you aren't too stupid and lazy to
get the Extra. Keep flying those model airplanes and thinking
you have a "pilot's license", too!!!! BWHAHAHAHAHAHAHAHA!!!!!!!!!

>
> So fatboy you got a wellfare

"Wellfare" Dumbass Cornholer makes good spell!
You should know how "welfare"is spelled, you senile old bastard,
since you get it from the government.

>(more whining by Cornholer)

Yet, you can't even pass it, that's why you are depserately
holding onto your obsolete Advanced.
Dumbass, the new Extra pool took the questions and materials
from the old Advanced exams, so in other words, Roger passed the
same test you took, dumbass!

>
> > That
> > morse code requirement too hard for you?
>
> Want to (incompetent Cornholer's postering)

Hehe..I can and did pass a 13 wpm code test when I initialy got
my General, dumbass! Still can't get that 5 wpm, eh, obsolete
license boy?
I see, once you got that obsolete license, you applied yourself
like you do in other things, you never improve.

>
> >>Never had a letter from Riley
> >
> >
> > Yes, you have.
>
> So post some proo (whines)

When you post the proof that Roger wouldn't have anything except what Marie left him.

> Either put up or shut up.

Aww, poor Butt Cornholer, on the rag again?

> I have posted proof of your malicious interference letter.

No, you haven't. You only posted the ARRL press release about it. You fucked up again.
And it alleged "malicious interference". Of course, one could presume with equal validity, the "evidence" was fabricated and thus improperly presented. You lose.

Even what warning letters represent is put in each FCC Enforcement Logs on the ARRL web site:

"NOTE: Issuance by the FCC of a Warning Notice indicates that the FCC has what it believes to be reliable evidence of possible rules infractions and not necessarily that the recipient has violated FCC rules."

http://www.arrl.org/news/enforcement_logs/2005/0521.html?nc=1 for example.

>
> > BTW, Marie didn't leave Roger any house by the creek, since the
> > house was Roger's, dumbass!
>
> You wouldn't have (unsubstantiated blatherings)

Proof???? No, you don't have any.

> Never ran any (whiny excuses)

Oh, so you can't even afford Ten-Tech equipment, oblsolete license boy? I guess when your children have power of attorney over you like yours do, they control the financial purse strings. WHat's the matter you senile old fuck, can't you remember even your own children's names????

> >
> > Poor butt cornholer, has an obsolete ham license and an
> > imaginary pilot's license. I know you don't have a pilot's
> > license, liar!
>
> Ok so prove it l (whines)

BWHAHAHAHAHAHA..my, that's quite the temper tantrum, obsolete license and imaginary pilots license boy.
There is nobody listed under "Buzz Corey" dumbass. That is the only name you give on here, unless you are hiding behind some "curtains"? BWHAHAHAHAHAHAHAHAHA!!!!!!

>
> > Caught you in another lie again.
>
> Caught you (IKYABWAI)

You couldn't catch a fucking clue if you did the clue mating
dance and plastered clue hormones all over your wrinkled obese
body.

>
> > !!!
> > Poor Butt Cornholer, when Riley makes him retest he'll be
> > downgraded to General, since they made the Advanced an
obsolete
> > license. But Butt Cornholer couldn't even pass the no code
> > technician license exam if he was retested today.
> >
>
>
> Riley doesn't (more whines and backpedals)

Oh, yes he does, for you have been jamming Toad's braodcasts.
It's all on tape.

Now tell us all about your imaginary pilot's license, obsolete
license boy.
I know you are too chickenshit to go see Roger in person.
BWHAHAHAHAHAHAHAHAHAHAHA!!!!!!!!!!!!!!!!!!!

--
Illiterate and senile Butt Cornholer proves he has imgainary
spelling skills as well as an imaginary pilot's license in

Poor Jimmie? Is it a sad thing because someone was never in the
military? Do you know that Jim has never worked in professional
communications? How would you know if Jim "NEVER did much"?

>>>Gotta take some serious cajones to jump out of an aircraft that

It does? And one who chooses not to do so doesn't have any? Is that
your claim?

> ...or
> even accept a draft notice (which Jimmie never did).

That would have been pretty tough for him to do since the draft no
longer existed. You never quite get the facts right, do you?

> That's not the truth, but that's what Lennie has insisted.

That's simply untrue, Stebie.

Stebie NEVER worked HF communications in the USMC. Indeed, he was NEVER in any sort of radio communications tasks as a helicopter ground maintenance crew.

Stebie still hasn't verified his CLAIM of being "Assistant" NCOIC at a USMC MARS station.

The United States military used NON-morse HF communications for the major tactical/strategic radio communications since 1948. [Stebie wasn't even conceived until much later...]

Thousands of men (and a few women) have worked in HF communications in the military. I was one of those thousands IN the military working on HF communications, "getting the messages through" and on a 24/7 basis. Stebie, the Avenging Angle of Dearth, has NOT. Stebie is jealous, poor thing.

> Therefore, that being the case, and Lennie having failed to
>discuss his successful procreation and subsequent rearing of offspring,
>we can conclude that it never happened.

Stebie, in his RAGE and ANGER, has lost his bearings on what
this newsgroup is about. Hint: It is about radio amateur
policy matters. Pediatrics is NOT the subject.

Stebie has expressed an inordinate desire to talk about others'
families, especially WIVES. This newsgroup is NOT about
Stebie's fantasies about others' marital relationships nor is
it about SEX. Yet, Stebie keeps on mentioning his "enemies"
(in the newsgroup and probably everywhere) as "penis head,"
using a Yiddish pejorative (even when he is unfamiliar with
Judaism nor its Central European ethnic group of Yiddish.

>> > You are very wrought-up on this subject of "parenting."
>> > Why? Why for discussion of amateur radio policy?
>>
>> Look at the subject line.
>
> Lennie claims to be an engineer, but can't seem to make notes of
>the "details"...

Tsk, tsk, tsk. Both "Quitefine" and Stebie (Assistant NCOIC
of Rage and Anger among the PCTA) don't understand that
"young ones" are not necessarily just their "own" offspring.

Stebie, the self-appointed "ethnic puritan" of this newsgroup,
couldn't make it on his own as a Purchasing Agent of a small
electronics company, yet claims/postures/implies that he
"knows" all about radio-electronics engineering, what the
engineers know, what the engineers do, etc., etc., etc.
CLAIMS. Brags. Posturing. Stebie's forte' as a mighty
macho morseman.

I make no "claim" of engineering. I AM one and have been for
many years. My professional occupation.

Stebie is a NURSE. "Quitefine" (James Miccolis) will NOT
reveal what HE works on or for...other than letting slip once
that he "works in vehicular technology" (in one of his
comments on one of the 18 Petitions for amateur radio
restructuring. "Quitefine" is NOT a member of the worldwide
Institute of Electrical and Electronic Engineers (IEEE), a
professional association.

>> That pretty much says it all - *you* have a problem including young
>> people. The surreal part is that you're neither a parent nor a radio
>> amateur.
>
> Lennie doesn't let little things like "no practical experience"
>keep him from expressing an "expert" opinion on a great many range of
>issues.

The "surreal" part of Miccolis and Robeson's diatribes is that:

1. No pediatrician is required to be a "parent." There is NO such "requirement" in any academic organization to "be a parent" in ANY degreed/titled work involving children OR procreation of children.

2. "Quitefine" (Miccolis) seems to disregard laws of physics in that ALL radios work by the SAME physical laws, regardless of human designations as to their application. [inconceivable that a claimed double-degree individual would insist that ONLY licensed radio amateurs (who have obtained a federal merit badge only in amateurism) can express any opinion at all.

3. In the United States of America, ANY citizen has the RIGHT to comment to their government on ANY law or regulation REGARDLESS of whether or not they have any "license" or other "authorization" to "operate" under some rules or regulations.

4. Neither Miccolis ("Quitefine") nor Robeson have ANY "authority" to RULE on U.S. amateur radio regulations, yet the seek to bar, to subjugate, to eliminate ANYONE BUT licensed radio amateurs from even talking about it. Apparently those two control freaks do not understand that NO FCC Commissioner or staff member is "required" to possess an amateur radio license in order to offcially regulate U.S. amateur radio.

5. Miccolis-"Quitefine" has NOT YET stated how many offspring HE has parented. He implies he has but the number, gender, are all big unknowns. Robeson has only mentioned his "offspring" from his second marriage...neglecting any mention of "offspring" from his first, failed marriage. Regardless of the NON-applicability of "offspring" as the ONLY "authoritative experience" in discussing young people, they implore (if not directly order) "offspring" as a "prime requirement" to talk about young people.

>> Your answer indicates what many have long suspected: that you
>> expect to be instantly recognized as an expert without having
>> to meet the requirements for a license.
>
> It was suggested to Lennie that he take some of this energy and
>submit a proposal to the FCC to allow "engineers" either a free pass
>or some sort of a "bridge" exam to get licensure.
>
> Never did it.

Tsk, tsk, tsk. A NON-applicable "request" NOT required.

That so-called "request" was simply a MISDIRECTION to try to stop any further talk on ELIMINATION OF THE MORSE CODE TEST for an amateur radio license.

As is quite obvious under any U.S. citizens' RIGHTS under the Constitution (of the United States, NOT the ARRL), "licensure" in amateur radio is NOT REQUIRED to talk about GETTING INTO amateur radio. To reiterate, NO FCC Commissioner or Staffer is required to possess any amateur radio license in order to lawfully regulate U.S. amateur radio.

Both of these control freaks have been invited to take their "authority" and "shove it up their I/O ports."

They never did it. However, they might have...and enjoyed it.

>> > Tsk, tsk. A radio does NOT operate by different laws of
>> > physics because some government agency designates it as
>> > "amateur."
>>
>> So what? "Physics" isn't the only consideration.
>
> And Lennie's been asked to please show where ANYone, other than
>him, has made said issue of it...
>
> No answers.

TSK, TSK, TSK. MANY ANSWERS. Apparently these two control freaks do not have sufficient reading comprehension...or have a psychological inability to separate their fantasies from reality. They are continuously "making issues" of such "clubhouse rules" where only THEY can "rule" yet neither one has legal/lawful/actual authority to rule.

>> Your writing is simply unclear, Len.
>
> It's also assinine.

Stebie, the Avenging Angle of Dearth, the newsgroup's counterpart to Elfren Saldivar, can only "reply" with a series of Personal Insults...which is little more than his RAGE and ANGER and personal frustration showing clearly.

> Would Lennie suggest that because people drive cars and trucks for
>"business" that no one may then drive, maintain or collect them for a
>"hobby"...?!?!

Stebie is still unable to focus on the newsgroup subject. Matters of vehicular transportation do NOT belong here.

> Once upon a time the idea that "teeners" using spark gaps and old
>Model T ignition coils for "communications" would be nothing more than
>a fad...

"SPARK," technically damped impulse oscillation, is FORBIDDEN by law.

Neither "Quitefine" nor Stebie were alive in the early days of radio when "Spark" was all that was available to amateur

radio. They've only READ about it, could NOT have used it
LEGALLY.

>> See the analogy?
>
> He can't see his an...uh...nose. How can he see an
>"analogy"...?!?!

Stebie is overly concerned with anal-genital areas of the
body. Stebie is overly concerned with other people's
wives, including desires to talk about their sexual or
marital practices.

This is NOT the newsgroup to talk about those things.

>> > Jimmie boy,
>>
>> There you go again. Why do you call names like that, Len?
>> Is there a reason you can't just call me "Jim", the way I
>> call you "Len"?
>
> That might make you his "peer", Jim...
>
> Can't have that!

PCTA Extra Double Standard. "Quitefine" and Stebie both
"allow" name-calling such as "PUTZ" and "gutless coward"
to others, yet object to their aliases or diminutive forms
of their given names.

Miccolis is NOT my "peer." He has not identified his actual
place of employment, has not identified his own "parenthood"
(which he REQUIRES of others), and has claimed to be a
"radio manufacturer." Tsk, he is not even a member of any
professional association. Stebie is a NURSE, has not even
worked IN any electronics engineering position...nor has he
done HF communications while in the military.

>> And you said there must have been fraud involved. You accused ARRL and
>> the VEs involved of dishonesty. Right here. That's a fact. Shall I
>> repost those claims?

Tsk, tsk. I wrote, some time ago, that the ARRL "sins by omission."
They do so often, especially in their publications on the history
of radio. The ARRL over-emphasizes (from omitting other workers
in radio) the "role" that radio amateurs have played in the
evolution of radio communications.

The first use of Single Sideband techniques was in long-distance
wired telephony. The first consistent use of SSB in HF
communications was by commercial and government organizations
beginning in the 1930s...and continues to this day. The ARRL
seems to have lost touch with the activities of commercial and

government users of SSB and imply that "SSB pioneering" was done by radio amateurs in the 1950s, two decades after the fact. One case of intellectual fraud...but it serves the purpose of making hobbyist hams feel "important." They (and many self-important hams) point to the Strategic Air Command about SSB and forget that such was SINGLE-CHANNEL SSB, something already done prior to WW2, dropped before WW2 due to lack of frequency stability techniques to keep costs low.

The ARRL has implied that quartz crystal frequency stability owes its existance (especially after WW2) to "efforts by hams" (in more pioneering). They neglect an overall electronics industry need for stable frequency control. They neglect the tremendous effort on wartime production of quartz crystal units by the electronics industry - A million quartz units a month in the last three years of WW2 and a national priority second only to the Manhattan Project. By not mentioning what has been known in the electronics industry they imply that hams are responsible for the pioneering...which tells ham hobbyists nice emotional things that make them feel important.

The first use of VHF FM in mobile communications was pioneered by commercial companies (Link and Motorola) and a few police departments prior to WW2. That was vastly increased by the U.S. military during WW2. The EM spectrum from VHF and up was opened by the whole radio world just before and certainly after WW2. Real history. The ARRL in QST magazine still refers to that huge part of the EM spectrum as "the world above 50 MHz" as if it is a sort of ghetto.

Where the HF part of the EM spectrum was once a major carrier of long-distance communications (especially over water), that is now greatly reduced, supplanted by geostationary sattelite radio relay, under-water digital fiber cable (using optically-"pumped" non-electronic amplifiers) carrying thousands of comm channels, troposcatter low microwave multi-channel beyond the line of sight distance. Users on HF have gone to single-channel SSB voice and TORs (Teleprinter Over Radio) data instead of manual morse code modes. The U.S. military no longer requires morsemanship for any communications occupation specialties. Still, the ARRL features HF communications, especially by "CW" as a "prime" communications spectrum...and the consign the "world above 50 MHz" to a sort of ghetto for those of lesser "ability." The ARRL loves to emphasize morsemanship as the epitome of amateur radio "excellence" to satisfy the old men at the League and the membership who want to feel good and "important in radio."

The ARRL still want to ignore the obvious fact of the overwhelmingly-most-increasing class in amateur radio being Technicians. They want to gloss over the fact that most of

those are NO-CODE-TEST Technicians. That pleases the old man hams who still think that morsemanship is "important" in radio. Those old men (chronologically or in mindset) want to fantasize their dreams of "being somebody." They like the words that feed their fantasies...and that lets the League hang onto them and keep them members.

There are several more subjects on radio history that can be shown, but the fantasizers and imaginers and those who want to posture about their "importance" will object and call names. Their "intellectual" response is to bring out idolated cases that are supposed to "refute" challenges of the actual sinning by omission by the mighty League.

> Our local club recently added two new licensees...both 9....No
>record, but yet more evidence that there ARE "young 'uns" entering
>Amateur Radio.

Irrelevant, relatively isolated case. Apparently neither one is the offspring of Stebie - who once touted the "ability" and "dedication" of his own 9-year-old.

So, all you mental nine-year-olds, feel good about your sub-teen intellectual prowess on passing the TEST. Continue to scamper about your "private clubhouse" and generally behave emotionally like kiddies about your "superiorities." Sooner or later your kinder-kind MIGHT grow up. [I'm losing my optimism on that]

The rest of us IN the radio-electronics industry will continue doing our adult things. We will pat you on the head when you are nice and spank you when you misbehave. Go to your room.

>No, it's not a diatribe, Len; it's an insult to the "Tomb of the Unknown".

Kiss my yes, Hans.

You've had a week to run off at the mouth on that repeated
bit of text...except your newsgroup ox was gored by Kim's
message. You are rather the high-strung "I'm in charge here"
person whenever someone comes up with ANY story "opposite"
your own cut-and-pastes from OTHER authors.

>It was an ill-considered attempt to make a cutesy
>7th-grade-clever-play-on-words?, and it dishonors the national shrine which it
>attempts to use in parody.

Pizz off, master super jeffe. You are NOT Chief of the Boat here.

> That you now try to rationalize your gaffe as just
>another episode in the ongoing Len-vs-Steve snit-contest speaks volumes.

Awwww...your newsgroup ox that got gored is still in pain?

I didn't see where you objected to that emotionally-unstable
good-buddy Extra's comments on "PUTZ" or "gutless coward" and
other Personal Insults about "dishonor" of men in my military
unit. Ah, but that's "okay" because Stebie da Wunder Marine
and this newsgroup's counterpart to Elfren Saldivar, is an
Amateur Extra!

PCTA Extra Double Standard flies again...above the flag of
our (at least MY) country.

Come to think of it, master super jeffe, I didn't see YOU at
the big federal cemetary on Monday. I was there as were
hundreds of others, honoring the souls of military veterans.
Too bad. A nice day. We could honor veterans with simple
prayers and ceremonies, and we did.

Now, great big "patriotic" master super el jefe, I'm going to
use my little bit of text anywhichway I want and still it
won't "dishonor" any members of my old military unit or the
entire United States Army. Feel free to contact the
Attorney General of the United States and have me arrested on

federal grounds of Treason and/or Sedition if that so ill suits your pristine salt-sea-washed self. Call the Department of Homeland Security if that suits you...and be sure to say a citizen of the United States of America, a veteran of the United States Army (Honorable), is "dishonoring" YOUR IDEA of what "patriotism" is supposed to be.

Oh, yes, and above all, NEVER let ANYONE post any story in here RIGHT AFTER YOU DID. Nobody but nobody can try to trump YOUR "literary efforts" of cutting-and-pasting OTHER people's textual works! Those folks "dishonor" your patriotism, don't they? :-(

Oh, and polish up that ham shield. There's a spot of dirt on it and that detracts from the blinding light of "federal authority" it's supposed to have whenever you yank it out of your pocket prior to "arresting a suspect."

You're out of the closet and into the ranks of the PCTA Extra Double Standard bearers. Keep your little clubhouse CLOSED from the "evil" influences of those "unpatriotic" no-coders!

>
>Not at all. Your lack of verifiable ID means there's room for
>doubt. Same for "Arf" or any other anonymous poster.

You seem to place a great deal of value on 'verifiability', Jim.

Heh. Just because someone's callbook ID is verifiable doesn't mean
that much else is. Take you, for example - other than what's in the
QRZ database, how much do we know about you? Just what you have
stated in your posts - that's all. Is what you say true ? Maybe -
maybe not. Unless someone is willing to put in the effort, time and
expense to research an individual's claims, they can be neither proven
nor disproven.

I suggest that, in a public forum such as this, an individual's
behaviour is a far better indicator of who they are than something as
silly as a callbook listing. Forget claims of education, heroic feats
and braggodocio - just read what the individual writes, and you'll see
the real person shine through. (for example, what were you doing when
you questioned my 'legitimacy' in this thread, Jim - picking yet
another fight with Len? Hmmm - that happens a lot, doesn't it??)

Whether "Arf!" or anyone else here is 'legitimate' or not is quite
immaterial! Why people are here, and how they behave while in here,

is of much greater importance.

And, of course, whether you believe that another poster is
'legitimate' or not is of no importance at all.

>
>> Yet here you make a case for Arf! Arf!'s existance

>those who agree with him.

Not necessarily. I have not always agreed with Len's points either -
nor he with mine - neither do I belittle his (considerable)
accomplishments and experience or deliberately pick fights with him to
bolster my own ego. (ahem).

Maybe that's why civil discourse is possible between us? Duh.....

Some on the group seem to have a pathological need to pick fights with
others, though - are you suggesting that the target of these attacks
should not return fire? (That wouldn't be much fun, would it?)

>
>In addition, Len has posted here under a variety of screen names

Several years ago I compared some of the attitudes in here
to old "Twilight Zone" and "Outer Limits" TV shows. Must
have their antennae out too far from their scalps... :-)

>> If you are FOR morse code testing by administrations, you are
>> "legitimate."
>
>> If you are against morse code testing then you are "illegitimate,"
>> "in error," "mistaken," "are a lying penis-head" and have
>> underarm odor.
>
>Heh! or worse..... :)

Tsk, ain't it awful? :-)

Poor Jimmie is all upset by "my name-calling." He is sorely
wounded. I've called him names like James, Jimmy, Jimmie
and he is all a-twitter over those "insults." Tsk, tsk,
he must have thought those are equivalent to "gutless lying
coward", a term used often by another PCTA Extra in
addition to "PUTZ." Maybe I'll just refer to James as
"Your Exhalted Highness" and he will immediately understand
that it does mean His High (and Mighty) Holiness! :-)

Yup, yup, there's a very REAL PCTA Double Standard in here.

These "radio experts" (all through an ability at rapid
morse code) seem to have NO experience with the new
lead-free "solder" which is starting to give electronics
production lines some very real problems with tin dendrites
or "whiskers." [dendrites form out of lead-free solder long
after assembly and can grow to short out traces on PCBs]
Apparently not one of the morsemen (might and macho though
they may be) KNOW about this as part of RoHS.

So, a master super chief calls a play on words nasty things.
TOMB OF THE UNKNOWN SOLDER is a many-level little diatribe.
First, on this lead-free solder according to RoHS rules.
Second, on our beloved "critic" and self-appointed, self-
styled Raddio Kopp - the Avenging Angle of Dearth. Third,
on all the emotion-only image dwellers who get too
overwrought by "approved" stylized patriotic phrases and
Want To KILL (or otherwise do nasty to) all those who do
not knee-jerk to THEIR "approved" patriotism.

Actually, those in the third group are hypocrites, taking
advantage of the medium to be much more than they really
are. Their "patriotism" is primarily for themselves, as
they can "be all that they (wish to) be" in a terrible
parody-travesty of the U.S. Army recruiting phrase.

On entering the U.S. military, recruits are sworn in and
promise to "defend the Constitution of the United States."
Too many in here have substituted ARRL for the United
States. Defending the Constitution of the ARRL (probably
with their lives, if needs be) is NOT national patriotism,
no matter how they rage.

>> [anyone can be anything in this medium...and many are! :-)]

Ask "Quitefine," the nom de pheume of James Miccolis.

"Pheume" is an aliteration, another play on words, a
mixture of 'plume' and 'fume' and 'phew.' :-)

Screum.

LenAnderson@ieee.org

>
> That's not the truth, but that's what Lennie has insisted.

That's simply untrue, Stebie.

Stebie NEVER worked HF communications in the USMC. Indeed, he
was NEVER in any sort of radio communications tasks as a
helicopter ground maintenance crew.

Stebie still hasn't verified his CLAIM of being "Assistant"
NCOIC at a USMC MARS station.

The United States military used NON-morse HF communications
for the major tactical/strategic radio communications since
1948. [Stebie wasn't even conceived until much later...]

Thousands of men (and a few women) have worked in HF
communications in the military. I was one of those thousands
IN the military working on HF communications, "getting the
messages through" and on a 24/7 basis. Stebie, the Avenging
Angle of Dearth, has NOT. Stebie is jealous, poor thing.

> Therefore, that being the case, and Lennie having failed to
>discuss his successful procreation and subsequent rearing of offspring,
>we can conclude that it never happened.

Stebie, in his RAGE and ANGER, has lost his bearings on what
this newsgroup is about. Hint: It is about radio amateur
policy matters. Pediatrics is NOT the subject.

Stebie has expressed an inordinate desire to talk about others'
families, especially WIVES. This newsgroup is NOT about
Stebie's fantasies about others' marital relationships nor is
it about SEX. Yet, Stebie keeps on mentioning his "enemies"
(in the newsgroup and probably everywhere) as "penis head,"
using a Yiddish pejorative (even when he is unfamiliar with
Judaism nor its Central European ethnic group of Yiddish.

>> > You are very wrought-up on this subject of "parenting."
>> > Why? Why for discussion of amateur radio policy?
>>
>> Look at the subject line.
>
> Lennie claims to be an engineer, but can't seem to make notes of
>the "details"...

Tsk, tsk, tsk. Both "Quitefine" and Stebie (Assistant NCOIC
of Rage and Anger among the PCTA) don't understand that
"young ones" are not necessarily just their "own" offspring.

Stebie, the self-appointed "ethnic puritan" of this newsgroup,
couldn't make it on his own as a Purchasing Agent of a small
electronics company, yet claims/postures/implies that he
"knows" all about radio-electronics engineering, what the
engineers know, what the engineers do, etc., etc., etc.
CLAIMS. Brags. Posturing. Stebie's forte' as a mighty
macho morseman.

I make no "claim" of engineering. I AM one and have been for
many years. My professional occupation.

Stebie is a NURSE. "Quitefine" (James Miccolis) will NOT
reveal what HE works on or for...other than letting slip once
that he "works in vehicular technology" (in one of his
comments on one of the 18 Petitions for amateur radio
restructuring. "Quitefine" is NOT a member of the worldwide
Institute of Electrical and Electronic Engineers (IEEE), a
professional association.

>> That pretty much says it all - *you* have a problem including young
>> people. The surreal part is that you're neither a parent nor a radio
>> amateur.
>
> Lennie doesn't let little things like "no practical experience"
>keep him from expressing an "expert" opinion on a great many range of
>issues.

The "surreal" part of Miccolis and Robeson's diatribes is that:

1. No pediatrician is required to be a "parent." There is NO such "requirement" in any academic organization to "be a parent" in ANY degreed/titled work involving children OR procreation of children.

2. "Quitefine" (Miccolis) seems to disregard laws of physics in that ALL radios work by the SAME physical laws, regardless of human designations as to their application. [inconceivable that a claimed double-degree individual would insist that ONLY licensed radio amateurs (who have obtained a federal merit badge only in amateurism) can express any opinion at all.

3. In the United States of America, ANY citizen has the RIGHT to comment to their government on ANY law or regulation REGARDLESS of whether or not they have any "license" or other "authorization" to "operate" under some rules or regulations.

4. Neither Miccolis ("Quitefine") nor Robeson have ANY "authority" to RULE on U.S. amateur radio regulations, yet the seek to bar, to subjugate, to eliminate ANYONE BUT licensed radio amateurs from even talking about it. Apparently those two control freaks do not understand that NO FCC Commissioner or staff member is "required" to possess an amateur radio license in order to offcially regulate U.S. amateur radio.

5. Miccolis-"Quitefine" has NOT YET stated how many offspring HE has parented. He implies he has but the number, gender, are all big unknowns. Robeson has only mentioned his "offspring" from his second marriage...neglecting any mention of "offspring" from his first, failed marriage. Regardless of the NON-applicability of "offspring" as the ONLY "authoritative experience" in discussing young people, they implore (if not directly order) "offspring" as a "prime requirement" to talk about young people.

>> Your answer indicates what many have long suspected: that you
>> expect to be instantly recognized as an expert without having
>> to meet the requirements for a license.
>
> It was suggested to Lennie that he take some of this energy and
>submit a proposal to the FCC to allow "engineers" either a free pass
>or some sort of a "bridge" exam to get licensure.
>
> Never did it.

Tsk, tsk, tsk. A NON-applicable "request" NOT required.

That so-called "request" was simply a MISDIRECTION to try to stop any further talk on ELIMINATION OF THE MORSE CODE TEST for an amateur radio license.

As is quite obvious under any U.S. citizens' RIGHTS under the Constitution (of the United States, NOT the ARRL), "licensure" in amateur radio is NOT REQUIRED to talk about GETTING INTO amateur radio. To reiterate, NO FCC Commissioner or Staffer is required to possess any amateur radio license in order to lawfully regulate U.S. amateur radio.

Both of these control freaks have been invited to take their "authority" and "shove it up their I/O ports."

They never did it. However, they might have...and enjoyed it.

>> > Tsk, tsk. A radio does NOT operate by different laws of
>> > physics because some government agency designates it as
>> > "amateur."
>>
>> So what? "Physics" isn't the only consideration.
>
> And Lennie's been asked to please show where ANYone, other than
>him, has made said issue of it...
>
> No answers.

TSK, TSK, TSK. MANY ANSWERS. Apparently these two control freaks do not have sufficient reading comprehension...or have a psychological inability to separate their fantasies from reality. They are continuously "making issues" of such "clubhouse rules" where only THEY can "rule" yet neither one has legal/lawful/actual authority to rule.

>> Your writing is simply unclear, Len.
>
> It's also assinine.

Stebie, the Avenging Angle of Dearth, the newsgroup's counterpart to Elfren Saldivar, can only "reply" with a series of Personal Insults...which is little more than his RAGE and ANGER and personal frustration showing clearly.

> Would Lennie suggest that because people drive cars and trucks for
>"business" that no one may then drive, maintain or collect them for a
>"hobby"...?!?!

Stebie is still unable to focus on the newsgroup subject. Matters of vehicular transportation do NOT belong here.

> Once upon a time the idea that "teeners" using spark gaps and old
>Model T ignition coils for "communications" would be nothing more than
>a fad...

"SPARK," technically damped impulse oscillation, is FORBIDDEN by law.

Neither "Quitefine" nor Stebie were alive in the early days of radio when "Spark" was all that was available to amateur

radio. They've only READ about it, could NOT have used it
LEGALLY.

>> See the analogy?
>
> He can't see his an...uh...nose. How can he see an
>"analogy"...?!?!

Stebie is overly concerned with anal-genital areas of the
body. Stebie is overly concerned with other people's
wives, including desires to talk about their sexual or
marital practices.

This is NOT the newsgroup to talk about those things.

>> > Jimmie boy,
>>
>> There you go again. Why do you call names like that, Len?
>> Is there a reason you can't just call me "Jim", the way I
>> call you "Len"?
>
> That might make you his "peer", Jim...
>
> Can't have that!

PCTA Extra Double Standard. "Quitefine" and Stebie both
"allow" name-calling such as "PUTZ" and "gutless coward"
to others, yet object to their aliases or diminutive forms
of their given names.

Miccolis is NOT my "peer." He has not identified his actual
place of employment, has not identified his own "parenthood"
(which he REQUIRES of others), and has claimed to be a
"radio manufacturer." Tsk, he is not even a member of any
professional association. Stebie is a NURSE, has not even
worked IN any electronics engineering position...nor has he
done HF communications while in the military.

>> And you said there must have been fraud involved. You accused ARRL and
>> the VEs involved of dishonesty. Right here. That's a fact. Shall I
>> repost those claims?

Tsk, tsk. I wrote, some time ago, that the ARRL "sins by omission."
They do so often, especially in their publications on the history
of radio. The ARRL over-emphasizes (from omitting other workers
in radio) the "role" that radio amateurs have played in the
evolution of radio communications.

The first use of Single Sideband techniques was in long-distance
wired telephony. The first consistent use of SSB in HF
communications was by commercial and government organizations
beginning in the 1930s...and continues to this day. The ARRL
seems to have lost touch with the activities of commercial and

government users of SSB and imply that "SSB pioneering" was done by radio amateurs in the 1950s, two decades after the fact. One case of intellectual fraud...but it serves the purpose of making hobbyist hams feel "important." They (and many self-important hams) point to the Strategic Air Command about SSB and forget that such was SINGLE-CHANNEL SSB, something already done prior to WW2, dropped before WW2 due to lack of frequency stability techniques to keep costs low.

The ARRL has implied that quartz crystal frequency stability owes its existance (especially after WW2) to "efforts by hams" (in more pioneering). They neglect an overall electronics industry need for stable frequency control. They neglect the tremendous effort on wartime production of quartz crystal units by the electronics industry - A million quartz units a month in the last three years of WW2 and a national priority second only to the Manhattan Project. By not mentioning what has been known in the electronics industry they imply that hams are responsible for the pioneering...which tells ham hobbyists nice emotional things that make them feel important.

The first use of VHF FM in mobile communications was pioneered by commercial companies (Link and Motorola) and a few police departments prior to WW2. That was vastly increased by the U.S. military during WW2. The EM spectrum from VHF and up was opened by the whole radio world just before and certainly after WW2. Real history. The ARRL in QST magazine still refers to that huge part of the EM spectrum as "the world above 50 MHz" as if it is a sort of ghetto.

Where the HF part of the EM spectrum was once a major carrier of long-distance communications (especially over water), that is now greatly reduced, supplanted by geostationary sattelite radio relay, under-water digital fiber cable (using optically-"pumped" non-electronic amplifiers) carrying thousands of comm channels, troposcatter low microwave multi-channel beyond the line of sight distance. Users on HF have gone to single-channel SSB voice and TORs (Teleprinter Over Radio) data instead of manual morse code modes. The U.S. military no longer requires morsemanship for any communications occupation specialties. Still, the ARRL features HF communications, especially by "CW" as a "prime" communications spectrum...and the consign the "world above 50 MHz" to a sort of ghetto for those of lesser "ability." The ARRL loves to emphasize morsemanship as the epitome of amateur radio "excellence" to satisfy the old men at the League and the membership who want to feel good and "important in radio."

The ARRL still want to ignore the obvious fact of the overwhelmingly-most-increasing class in amateur radio being Technicians. They want to gloss over the fact that most of

those are NO-CODE-TEST Technicians. That pleases the old
man hams who still think that morsemanship is "important" in
radio. Those old men (chronologically or in mindset) want to
fantasize their dreams of "being somebody." They like the
words that feed their fantasies...and that lets the League
hang onto them and keep them members.

There are several more subjects on radio history that can be
shown, but the fantasizers and imaginers and those who want
to posture about their "importance" will object and call names.
Their "intellectual" response is to bring out idolated cases
that are supposed to "refute" challenges of the actual
sinning by omission by the mighty League.

> Our local club recently added two new licensees...both 9....No
>record, but yet more evidence that there ARE "young 'uns" entering
>Amateur Radio.

Irrelevant, relatively isolated case. Apparently neither one
is the offspring of Stebie - who once touted the "ability" and
"dedication" of his own 9-year-old.

So, all you mental nine-year-olds, feel good about your sub-
teen intellectual prowess on passing the TEST. Continue to
scamper about your "private clubhouse" and generally behave
emotionally like kiddies about your "superiorities." Sooner
or later your kinder-kind MIGHT grow up. [I'm losing my
optimism on that]

The rest of us IN the radio-electronics industry will continue
doing our adult things. We will pat you on the head when you
are nice and spank you when you misbehave. Go to your room.

LenAnderson@ieee.org

This newsgroup is not about Pediatrics. Nor is it about a weak bladder, and
you sure seem to be "pissing" an awful lot of late, Lennie.

It's not about permission, Leo.

It's about the idea that I'm not going to make a big deal about
your "real"identity. Nor am I going to judge the content of
your posts by whether or not you reveal that identity, or whether or
not you agree with me.

I put some value on it.

If a person really believes in what they say, why shouldn't they
give their "real" identity?

> Heh. Just because someone's callbook ID is verifiable doesn't > mean that much else is.
Take you, for example - other than
> what's in the QRZ database, how much do we know about you?
> Just what you have
> stated in your posts - that's all.

Actually some people here know a lot more. There's private email,
my website (which you found), and articles I've written in amateur
radio magazines. I've also met at least one other rrapper in person,

and had QSOs with several others on the ham bands. In
fact, I had QSOs with at least two other regulars here long before
I ever heard of rrap.

> Is what you say true ?

Yes.

> Maybe -
> maybe not. Unless someone is willing to put in the effort,
> time and
> expense to research an individual's claims, they can be neither
> proven nor disproven.

Some claims are easily disproven, though. For example, here in
the USA, amateur radio licenses have a normal term of 10 years.
If a license is not renewed before the end of its term, the
amateur loses all operating privileges. However, there is a two-year
grace period during which a ham can apply for renewal without
retesting.

This is all explained clearly in Part 97 (FCC rules for the ARS.

Len Anderson claimed that the FCC does not use the word "expired"
to describe licenses that are in the grace period. Part 97 clearly
shows that FCC does indeed use the words "expire" and "expired" for
that purpose. So Len's claim is easily disproven.
>
> I suggest that, in a public forum such as this, an individual's

Why is a callbook listing "silly"?

I agree with you that someone's behaviour is a better indicator,
though.

> Forget claims of education, heroic feats
> and braggodocio - just read what the individual writes,
> and you'll see
> the real person shine through. (for example, what were you
> doing when
> you questioned my 'legitimacy' in this thread, Jim - picking yet
> another fight with Len?

No.

Look back at the actual discussion, and you'll see it was about
the possibility that you and Len were one and the same person.
W3RV said it was not possible and I said it was.

How is that trying to pick a fight?

> Hmmm - that happens a lot, doesn't it??)

Actually, Len seems to want to pick fights with anyone who
disagrees with him on Morse Code testing - or a variety of
other subjects.
>
> Whether "Arf!" or anyone else here is 'legitimate' or not is
> quite immaterial!

I agree! Tell it to Len, though.

ego. (ahem).

You mean like the way he makes fun of my name, education, age,
license class, homebrew equipment, radio operating skills....
>
> Maybe that's why civil discourse is possible between us?
> Duh.....

Or maybe it's because you haven't disagreed with him on any
of his trigger issues.

Or maybe you and he are one and the same. Or maybe you're a
friend of his, doing a version good cop/bad cop.

Some of your phrases sound a lot like Len. That doesn't prove
a thing, of course.

> Some on the group seem to have a pathological need to pick
> fights with
> others, though - are you suggesting that the target of these
> attacks
> should not return fire? (That wouldn't be much fun, would it?)

Let's see... Len calls me names even though I don't call him
anyhting except "Len" or "Mr. Anderson" or "Len Anderson".

Len tells me and others here to shut up and/or go away - but I don't
tell anyone to do either.

Who is picking a fight with whom?
>

At first. But that's not the point.

> Get the humor? Avery Fineman...A Very Fine Man...heh heh.

Doesn't seem funny to me.

Here's a simple, direct question:

Do you think Len's little piece on the "Tomb of the Unknown Solder" is
funny? Or is it an insult to the Unknowns? Or is
it something else?

What makes a person a real ham?
Is it doing more then 5 wpm code?
Is it being accepted by certain other hams?
Could it be the date they were first licensed, or maybe the class of
license they hold now?
Can a person climb to Extra with today's test and be considered a real ham?
Is yodoc aka K3LT a real ham, or the one to determine who is a real ham?
Can somebody who gets into amateur radio today with the "give away
license" ever be considered a real ham?
Does getting a vanity license that is an older call such as K8*** or
WD8*** make you a real ham?
I didn't take the free upgrade to general, so would this make me a cb'er
or no coder as the toad says?
I'm not being a troll, I would really like to know the answers to this!

The FCC says this:

&#65533;97.3 Definitions.

(a) (1) Amateur operator. A person named in an amateur
operator/primary station grant on the ULS consolidated
licensee database

If your name is on an unexpired license grant, you're a real ham.

Next question?

Thanks Hans, I knew that part. I was wondering what people here think a real ham is. In the past 10 years I've heard so much belittling about lower class licenses, I was just curious what others thought was on this subject? I understand that there is no real answer and most of it is just an opinion.
Some people here wouldn't consider anybody a real ham unless they could quote all the FCC rules and regs. by heart! :)

A "Real Ham" is proficient in all forms and modes of communications. One of the primary purposes of Amateur Radio is to provide a pool of qualified radio operators in the event of emergency. Thus being able to use Morse Code at anything but training wheel speed is a big plus.

> Is it being accepted by certain other hams?

No, not entirely. But being able to assimilate with minimum friction is a big help. In otherwords don't show up with a "I know it all attitude" and have a bit of respect for those that have been there before you.

> Could it be the date they were first licensed, or maybe the class of
> license they hold now?

That does have a bearing on things. Don't come on with the above attitute holding a Technician ticket for 6 months, and expect to be treating with respect. Respect is earned me boy.

> Can a person climb to Extra with today's test and be considered a real
> ham?

No, not really. Must I elaborate on the obvious?

If one does that wonderous dead and then EARNS the respect of those other hams. A lot of what I said above is bypassed. Respect, Earned those are the key words here.

> Is yodoc aka K3LT a real ham, or the one to determine who is a real ham?

Don't know the man.

> Can somebody who gets into amateur radio today with the "give away
> license" ever be considered a real ham?

Sure...see above.

> Does getting a vanity license that is an older call such as K8*** or
> WD8*** make you a real ham?

A WD8? a joke right? Try W or K ...one by two or three, non vanity of course. Thats an old timer.

As a matter of fact the FCC once considered the W/K prefix "prefered calls". And at one time the FCC required you to change your call if you permanetly moved to another district. And in deference to the W/K....if you had one

they would issue another from the prefered block.

Which is how I got my present call (W4NTI) because I used to have K8BHH.
Course that all went to crap with the alphabet soup system of today.

> I didn't take the free upgrade to general, so would this make me a cb'er
> or no coder as the toad says?

No, just a no coder. Unless of course you did pass a 5wpm test. Then you
would be a Technician. Hi hi.

> I'm not being a troll, I would really like to know the answers to this!
>

Hope that helps a bit.

> macho morseman.

More lies.

Why does Leonard H Anderson continue to lie?

Where are these alleged "claims" of "know(ing) all about
radio-engineering..."

You've beena sked before. You never substantiate your claim.

YOU prove MY claim that you are a liar.

Again.

> I make no "claim" of engineering. I AM one and have been for
> many years. My professional occupation.

You claim to be an engineer. You refuse to produce any
references, other than a few by-lines in a failed Amateur magazine, to
show such work.

> Stebie is a NURSE.

That's not quite correct.

I am GOOD Nurse.

> The "surreal" part of Miccolis and Robeson's diatribes is that:
>
> 1. No pediatrician is required to be a "parent." There is NO
> such "requirement" in any academic organization to "be a
> parent" in ANY degreed/titled work involving children OR
> procreation of children.

There's nothing "surreal" about it at all.

What's "surreal" is an unlicensed, childless old man petitioning
the FCC to enact an age limit where one is not called for.

> 2. "Quitefine" (Miccolis) seems to disregard laws of physics

Leonard H. Anderson perpetrates yet ANOTHER lie.

NEVER ONCE has Jim Miccolis, myself, or any other licensed
participant in this fourm suggested anything of the like.

> 3. In the United States of America, ANY citizen has the RIGHT
> to comment to their government on ANY law or regulation
> REGARDLESS of whether or not they have any "license" or
> other "authorization" to "operate" under some rules or
> regulations.

Sure they do.

And it's also glaring apparent when the "petitioner" has absolutely
no idea what they are talking about.

That usually comes from not having any practical experience in the
subject matter they are commenting on. IE: Lennie and Amateur Radio
or Child Rearing.

> 4. Neither Miccolis ("Quitefine") nor Robeson have ANY

> to possess an amateur radio license in order to offcially
> regulate U.S. amateur radio.

You continue THIS misrepresentation despite there being absolutely
no evidence of ANYone except YOU trying to "enforce" some kind of
censorship...As a matter of fact, within the last 5 days alone you've
made no fewer than four direct demands to "shut up", "drop it", and
"LEAVE IT ALONE" and "just forget it"...

> 5. Miccolis-"Quitefine" has NOT YET stated how many offspring

> as a "prime requirement" to talk about young people.

Lies, lies and more lies.

I've mentioned all of my kids at one time or another, Lennie.

> >> > Tsk, tsk. A radio does NOT operate by different laws of

> >
> > No answers.
>
> TSK, TSK, TSK. MANY ANSWERS.

A blatant lie.

Provide JUST ONE quote rom ANY of us wherein we state that the
physics of radiowave propagation are any different for Amateur Radio
than any other service.

> Apparently these two control
> freaks do not have sufficient reading comprehension...or have
> a psychological inability to separate their fantasies from
> reality. They are continuously "making issues" of such

> "SPARK," technically damped impulse oscillation, is FORBIDDEN
> by law.

Sure it is.

But that doesn't negate my (factual) notation that early radio was
once deemed nothing mroe than a "fad", just like text messaging is for
kids today.

> >> > Jimmie boy,

> in radio) the "role" that radio amateurs have played in the
> evolution of radio communications.

Big snip of irrelevent historical diversion...

You point-blank called the League, in general, and the BoD in
particular, "dishonest".

You've been challenged over and over to provide SOME sort of
verifiable reference that at least corroborates a CLAIM of dishonesty,
let alone any facts to substantiate it.

> The first use of Single Sideband techniques...(SNIP)

13 lines of non-pertinet diversion.

> The ARRL has implied that quartz crystal frequency stability
> owes its existance (especially after WW2) to "efforts by hams"
> (in more pioneering). They neglect an overall electronics
> industry need for stable frequency control. They neglect the

> only to the Manhattan Project. By not mentioning what has

> been known in the electronics industry they imply that hams
> are responsible for the pioneering...which tells ham hobbyists
> nice emotional things that make them feel important.

The FACTS are that this crystanl control WAS pioneered by Amateurs
and implemented by them.

> The first use of VHF FM in mobile communications was pioneered
> by commercial companies (Link and Motorola) and a few police
> departments prior to WW2. That was vastly increased by the U.S.
> military during WW2. The EM spectrum from VHF and up was opened

> Real history. The ARRL in QST magazine still refers to that
> huge part of the EM spectrum as "the world above 50 MHz" as if
> it is a sort of ghetto.

No...

The characteristics of radio wave propagation ARE different above
50Mhz. Perhaps if you were actually PRACTICED in the radio arts you'd
know this.

> Where the HF part...(SNIP)

Seventeen lines of diversion.

> The ARRL still want to ignore the obvious fact of the
> overwhelmingly-most-increasing class in amateur radio being
> Technicians. They want to gloss over the fact that most of
> those are NO-CODE-TEST Technicians. That pleases the old

> words that feed their fantasies...and that lets the League
> hang onto them and keep them members.

More absolutley dishonest and deceitful rhetoric.

WHY does Leonard H Anderson continue to lie in the face of
overwhelming evidence to the contrary...?!?!

> There are several more subjects on radio history that can be
> shown, but the fantasizers and imaginers and those who want
> to posture about their "importance" will object and call names.
> Their "intellectual" response is to bring out idolated cases
> that are supposed to "refute" challenges of the actual
> sinning by omission by the mighty League.

Even a casual perusal of ARRL publications will show Lennie's
tales to be exactly that...tales...

> > Our local club recently added two new licensees...both 9....No
> >record, but yet more evidence that there ARE "young 'uns" entering
> >Amateur Radio.

>
> Irrelevant, relatively isolated case. Apparently neither one
> is the offspring of Stebie - who once touted the "ability" and
> "dedication" of his own 9-year-old.

Not irrelevent. Factual. It's happening all over the United
States.

Even in Southern California.

> The rest of us IN the radio-electronics industry will continue
> doing our adult things.

Like what?

You've not done a single "adult" thing here. You lie...you
insult...you deceive...

> We will pat you on the head when you
> are nice and spank you when you misbehave.

No you won't.

> Go to your room.

Yet another Lennieism for "shut up"

> understand that there is no real answer and most of it is just an opinion.

I think that there >>IS<< a real answer. If you have any class of drivers license you're a "real" licensed driver. The same holds true for hams.

The opinion of those who "belittle" others who haven't attained some arbitrary class of license or demonstrated an ability to beep at some arbitrary speed is, in my opinion, really nothing more than a mask for their own insecurity.

The "hands-down-best-ham-I-ever-knew" is Gene Schwarz, W0VDI. Gene was an original 1953 Technician, and the last beep he ever copied was at his 5WPM examination session 52 years ago. A great Elmer, club "sparkplug"/volunteer, tinkerer-cum-laude (several RF-related patents in his name --- never went to engineering school), expert public service traffic handler, and all-around-good-guy. Sadly, Gene is now SK (victim of the "Big C"). Based on the class of his license, he'd not be "real" in some opinions around here, so you can guess how much weight I think "opinion" carries.

I hold little regard for, and give no credence to the opinion of any ham who judges other hams based on the class of their license.

73, de Hans, K0HB

> or no coder as the toad says?

Study the extra written test, bring your oldest license, and
(if you pass it) get your extra. Then you'd be the same
as me.

As for being a "real" ham, do one or more of the following:
Elmering, contesting, building equipment and experimenting,
public service, and such. And NOT QRMing, repeater kerchunking
excessively, ignoring accepted formal or informal band plans,
tuning up on top of other QSOs, bad language, and such.

>nor disproven.

I disagree in part, as far as this newsgroup is concerned:
Certain individuals in here (curiously coincidental on
their attitudes favoring morse code testing!) are allowed
free rein on whatever they CLAIM. Others, challenging that
attitude are rained on...lately insofar as national
patriotism is concerned.

That is the manifest of the PCTA Extra Double Standard
bearers.

>I suggest that, in a public forum such as this, an individual's
>behaviour is a far better indicator of who they are than something as
>silly as a callbook listing. Forget claims of education, heroic feats

I can almost read the responses to that before he writes
them... :-)

>Whether "Arf!" or anyone else here is 'legitimate' or not is quite
>immaterial! Why people are here, and how they behave while in here,
>is of much greater importance.

Ahem...this is NOT allowed in the PCTA Extra Double
Standard handbook. :-)

>And, of course, whether you believe that another poster is
>'legitimate' or not is of no importance at all.

Oy gevalt! That will raise the Hue and Cry! :-)

>>Please note that Len insists on calling "Arf!" names and comparing
>>him to Nigerian bank scammers, but does not do the same for
>>those who agree with him.

"Nigerian?" Did I say specifically "Nigerian?" :-)

>Not necessarily. I have not always agreed with Len's points either -
>nor he with mine - neither do I belittle his (considerable)
>accomplishments and experience or deliberately pick fights with him to
>bolster my own ego. (ahem).
>
>Maybe that's why civil discourse is possible between us? Duh.....

Another U.S. Extra used to pull out some phrase about
"gentlemen" and discourse in here. That Extra seems
to have dropped such phraseology when others have posted
items about national patriotism in here...after he has
repeat-posted old works written by others. <sigh>

>Some on the group seem to have a pathological need to pick fights with
>others, though - are you suggesting that the target of these attacks
>should not return fire? (That wouldn't be much fun, would it?)

Bill Cosby used to have a comedy routine many years ago
about the Revolutionary War. It started out with a
"Referee" explaining to the "player captains" what the
"game rules" were. [naturally one-sided, the Redcoats
had to march in straight lines in the open while the
Revolutionaries could hide behind trees and rocks, firing
at will] If one was an American, that was very funny.

That was definitely NOT funny to a nationalistic Britisher
at a social gathering in the Hollywood Hills. I could see
the Brit's point of view, but others seemed not to. The

hostess sensed nastiness brewing and intervened by changing
the subject to a party activity, etc. Crisis averted.

Bill Cosby went on to become a beloved comedian in American
TV. Yet the subject matter [our Revolutionary War] was not
a trivial thing when it was fought; England never really
forgave the upstart Colonies for that and the War of 1812
had to repeat the whole process nearly 4 decades later.
England didn't win that war either.

A very remote parallel sort-of exists in here, the PCTA
bravely "fighting" to keep their royal RULE alive, yet are
slowly losing. The much-touted near-Byzantine CLASS
structure of U.S. amateur radio has not been decimated, it
has been cut in HALF. [Roman Legions were never that
severe with their "disciplinary" measures of decimation]
Further, to add insult to their "injury," the beloved
Title/Rank/Status of "20 WPM Tested" was reduced to a
"mere" 5 WPM. [their cold, dead reasoning refuses to
let their mental fingers release their code keys...tsk]
Their "Empire" is falling and they curse the evil "sloth"
in revenge; George Lucas couldn't make a film on this
epic due to too many "Annakin" manmiquins abounding.
[see "Revenge of the Sloth" who want only the "easy way
to get a license...etc, etc, ad nauseum]

>>In addition, Len has posted here under a variety of screen names
>>(like "averyfine" and "averyfineman") often without any real ID.
>
>I had no problem figuring out who the author of those posts were - did
>you? Get the humor? Avery Fineman...A Very Fine Man...heh heh.

Anal-retentive morsemen have a "sense of humor" limited to
laughing at those they try to humiliate. Tsk.

My REAL Identity has never changed. It is still the same as
my byline in Ham Radio Magazine, as is my postal address.
A "screen name" or "handle" on a computer-modem provider site
is dependent on the standards that provider establishes. There
is NO "real ID" possible through nearly all computer-modem
service providers. The exception is the "forwarding alias"
provided by some sites such as the IEEE and ARRL both have
for their members. As an IEEE member since 1973, my real
identity is definitely known to them and has been for 35 years.
I could not fake any "forwarding alias" through them due to
their own controls to insure honesty; I could only choose what
to use as an "alias" name. I had that capability since over
three years ago but never got around to using it.

"Avery Fineman," "LenOver21" were all handles I used in BBS
computer-modem communications 20 years ago. "No CW Test"
was a new one chosen just for this newsgroup 5 years ago.

That was dropped due to the late (?) W0EX perverting that to "No CW Testicles" in his replies. Strangely, there was NO objection to that rather obvious male anatomy term but there was much ado about breasts and the alleged "pornographic" callsign of Kim, W5TIT.

When I first joined AOL, their rules permitted screen names of a maximum of 8 characters. Since AOL membership is a few millions and that they do not allow identical names, having a set of common real names makes it difficult to choose a desired screen name without possessing a personal, federally-authorized, official merit badge callsign of the U.S. amateur radio corps. Since my life is NOT ruled by any hobby, the choice was either to use an old handle or improvise with a bit of humor. [humor is hard to come by in this oh-so-very serious gathering of beagles] AOL rules were relaxed later to all members' relief...and also increased to a maximum of SEVEN screen names per subscription! [all the same subscriber and billed to the subscriber] His Most Honorable Royal Highness of Morseman Hall has that same option.

Leo, if you happen to chance upon an AOL screen name of "Juan Mortime" in the future, that will be me. [pronounce it to get the pun - mightier than the sword] No doubt that is, somewhere, already OUTRAGING and INSULTING (!) Spanish speakers for "unpatriotically defacing Latin customs" everywhere. Sigh. I have more names plus another Internet provider. Everywhere one goes we find the anal-retentive with figurative USB connectors jammed up their I/O ports.

If someone wants to actually discuss something with me, fine. I've done that for 20 years without insulting anyone... except those USB-in-the-I/O-port folks. Others who think they can shoot verbal nasties at me with impugnity will get much more "return fire" than they expected. Screum.

Best of springtime to you up in the north lands, Leo.

I wish that all of them would get the heck back
to 14.313 and 75 Meters. There ain't been a
really funny ham radio freq since RH busted up
the original 14.313 and 3.894.5 some Years ago.

Ham radio needs a DEDICATED HF COMEDY CHANNEL
on 20 and 75 Meters once again, to provide us all (ham and SWL
alike) with some good quality LIVE ENTERTAINMENT once again.

Heck...some of the keyclowns in rec.radio.amateur.policy would make
for great on-the-air personalities and "Dayton Celebrities" just like ole
Herbie, Porkbutt, Polly and the rest of em were Years ago if they'd
just get off Usenet and back on live radio once again!

Shoot, I can recall when Herb showed up at Dayton one year with
a few of the other Original 14.313 Clowns and hams were actually
lining up to get his autograph (!!). Now that's Ham Celebrity Status!

How about it boys? The stage is empty and you're just a PTT switch away
from ham radio stardom, unless you want to sit here and whack-off
to usenet postings like a couple of nerds !!

Only people who were licensed on February 15th, 1955 are real hams. All
others are a sham.

> Can a person climb to Extra with today's test and be considered a real ham?

You have to take the tests administered in 1932.

> Is yodoc aka K3LT a real ham, or the one to determine who is a real ham?

Good lord, he hasn't posted here in a long time, why bring Larry into
the mix?

> Can somebody who gets into amateur radio today with the "give away
> license" ever be considered a real ham?

You don't know the half of it! I was forced at gunpoint to take the
ridiculously easy tests available today. I wanted to take an older test,
but the bleary eyed VE, cocked the trigger on his 45, and I knew it was
to either become a nickel extra, or die!

What makes a person a real ham?

KOHB says
The FCC says this:
§97.3 Definitions.
(a) (1) Amateur operator. A person named in an amateur
operator/primary station grant on the ULS consolidated
licensee database
If your name is on an unexpired license grant, you're a real ham.

The definition you quoted says"Amateur Operator". There is no mention
of the word "ham"
in the definition.

"Ham" is a label given to certain people with a certain belief system.
"Hams" are a subset of the group of Amateur operators. Not all amateur
operators are "hams".

What makes a person a Ham? There are too many characteristics to list.

Hams like antennas, and Morse code. They usually don't like the
technical aspect of the hobby (except for antennas).

They are often older, and male. They like to use the terminology. They
like to discuss ham politics.

There are other characteristics of a ham, which I will not list.

Is it doing more then 5 wpm code?
Yes, this is absolutely required to be accepted as a ham.

Is it being accepted by certain other hams?
Hams share certain beliefs and characteristics.
Without acceptance, one cannot be a "true" ham.

Could it be the date they were first licensed, or maybe the class of
license they hold now?

Sorry, I do not know or understand the question. As for the class of
licence they hold right now, Morse code is required above the
Technician class. Those in the Technician class can still be hams, as
long as they agree with ham beliefs. One of those beliefs, of course,
is that they will eventually learn Morse code.

Can a person climb to Extra with today's test and be considered a real
ham?
Yes, of course.

Is yodoc aka K3LT a real ham, or the one to determine who is a real ham?
I don't know.

Can somebody who gets into amateur radio today with the "give away license" ever be considered a real ham?

The license is a "give away" - no disputing that.

I answered this question above. You are still a ham if you believe, and will eventually learn Morse code.

Does getting a vanity license that is an older call such as K8*** or WD8*** make you a real ham?

I don't know.

I didn't take the free upgrade to general, so would this make me a cb'er
or no coder as the toad says?

I'm not being a troll, I would really like to know the answers to this!

How did you know about the vanity license?

2092. Re: What makes a real ham?

Newsgroup: rec.radio.amateur.policy

What makes a real amateur radio operator is a current and valid station and operator license issued by the FCC.

What makes a real ham is the ability to kindly and gently assist another radio operator to understand something about the art and science of electronics that they do not understand.

>know this.

Stebie now think he be James Clerk Maxwell 2nd? Stebie nuts.

...the sun sets on the Tomb of the Unknown Solder as a solitary
figure in a patch-adorned flight suit slowly paces out his lonely
path of anger, J-38 in one hand, bayonetted USMC soldering iron
in the other. Pre-recorded marine marches softly fill the air,
interspersed with dits and dahs of a few PCTA morsebirds not yet
extinct. The Tomb of the Unknown Solder is a lonely place, deep
in the valley of neuroses, anger, and frustration. The single
sentinel counts cadennce to himself, muttering "flux you, flux
you" between the slow steps. His fists are clenched, eager to do
bottle but only sipping a cup of unkindness. It is sad but the
sentinel at the Tomb of the Unknown Solder keeps going. He does
not know why and that is the tragedy. The sun slowly sets on the

Tomb of the Unknown Solder leaving only the red light of fire in the eyes of the muttering sentinel. Those glow in the dark like LED pilot lights. Hatred lives on in his twilight of despair.

Temper fry.

Yep. and not a bit of good for transmitting on ANY band. No
STATION license to transmit with.

> Len he got California driver's license.

So do a million illegal aliens. Your point?

> Len he got poetic license.

Unfortunatley he never uses that one.

> Len NOT "petition FCC."

That's my point. You allege an impropriety in licensing. You
have been encouraged to do something about it. You haven't. No guts.

> Len make Comment on 22 NPRMs and Petitions.

You mean you spammed the FCC with the same diatribe and personal
insults you accuse others of.

> Stebie be perfect, nebber lie, say allatime odder pipples LIE!

You need help, Lennie.

> ...the sun sets on the Tomb of the Unknown Solder...(SNIP)

And once again Leonard H Anderson demonsrates his absolute lack of
respect and reverence for American soldiers who made the ultimate
sacrifice for their country.

Leonard H Anderson is a disgrace to all Veterans of the Armed Forces of the United States, living or deceased.

Again.

> "Ham" is a label given to certain people with a certain belief system.

What "belief systems", Vipul...?!?!

"Belief systems" is a catch-phrase you usurped from Lennie
Anderson. Lennie is NOT a good role model to scam lines from.

> Hams like antennas, and Morse code. They usually don't like the
> technical aspect of the hobby (except for antennas).

(Here we go again....)

Who says so, Vipul...?!?! What organization, rule or entity made
this "rule"...?!?! I've asked you this before and you've never
explained yourself.

> They are often older, and male.

So...Shall we implement euthansia and castration if a licensee
dares to get older or have the wrong chromosomes...?!?!

> They like to use the terminology.

Uhhhhh...yyyeahhhh...It's called "communication"...In order to
effectively express and exchange ideas there has to be some agreed upon
language and terms relating to the intended topic, Vipul.

Please name me ANY sport, science, avocation, passtime or other
human pursuit that DOESN'T have 'terminology', Vipul.

> They like to discuss ham politics.

As opposed to roast beef politics...?!?!

> There are other characteristics of a ham, which I will not list.

Of course not.

>> Is it doing more then 5 wpm code?
>

> Yes, this is absolutely required to be accepted as a ham.

Who says? Where is this stated? In what FCC rule or ARRL by-law
is it established? Is it in invisible ink on my FCC Form 660?

>> Is it being accepted by certain other hams?
>
> Hams share certain beliefs and characteristics.

Baptists share certain beliefs and characteristics. So do
dentists. Police, Fire and EMS personnel have their own beliefs. So
do Hindus, NASCAR drivers and cat lovers.

What was YOUR point?

> Without acceptance, one cannot be a "true" ham.

Sure you can.

Lennie doesn't accept ANY of us...Does that mean we don't exist?

Once and for all, Vipul...

There is no one person, group, organization, entity or "belief
system" that dictates what makes a "good ham".

> Could it be the date they were first licensed, or maybe the class of
> license they hold now?
>
> Sorry, I do not know or understand the question.

Did you need it in another language? Seemed pretty straight
forward to me.

> As for the class of
> licence they hold right now, Morse code is required above the
> Technician class. Those in the Technician class can still be hams, as
> long as they agree with ham beliefs. One of those beliefs, of course,
> is that they will eventually learn Morse code.

You keep saying this but you never explain yourself.

>> Can somebody who gets into amateur radio today with the "give away
>> license" ever be considered a real ham?
>
> The license is a "give away" - no disputing that.

Sure there is.

To the best of my knowledge no one is "given" a license. Everyone
is required to take one of several written exams. If they opt to
operate on HF, they must take a Morse Code exam.

And despite the fact that the license IS markedly easier to get
these days, people still manage to fail the exams. Ergo it's NOT a
"giveaway"...

> How did you know about the vanity license?

Uhhhhhhhhhhh...read about it?

Maybe it was in some of that "terminology" you seem to think is so bad...

No. The longer the rebuttal attempt, the more likely it is that the
original opinion was correct. Hence the direct proportionality.

2102. Re: Why not more young'uns in Ham radio

Newsgroup: rec.radio.amateur.policy
Date: 2005-06-03 11:49:29 UTC
From: John Smith <assemblywizard@gmail.com>
Message-ID: <htXne.1$pJ.314480@news.sisna.com>
Source record: 109335

If ever in doubt why the ham numbers are driving, drive over to a
college, ask students in the electronics engineering and technology
classes why they are not interested in getting a ham license. Many will
really not even know much about--however, when they hear the part about
code, and how for all privileges you must take the code test--you lose
them...
I am sure now there will be a lot who disagree with this--they will ALL
be over 30 and they will never ask the people who would get the
licenses--why they DON'T get the licenses...
Nero fiddles--Rome burns...

Warmest regards,
John

WOW !!!!

A Freeband REPEATER :)

Now this looks like a great DX catch for SWL and Ham alike!

Does it operate 24/7 ?

deal.

To over 600 or so questions? You claim Roger is a dumb
hillbilly....are you contradicting yourself, lisping cocksucking
faggot? And since there is no way of knowing which exact
questions are on the test, tell me how he could just memorize
the questions and answers and pass it. Guess he'd have to know
the material inside out, right?

> There was no pool of questions with the answers when I passed
my advanced
> test, just a study guide. (lies)

More lies from the imaginary pilot's license twat Butt
Cornholer. There probably was a "study guide" for the Extra,
too, so why didn't you get it?

>I had to know the material, unlike you wogie.

You must've been out the day English punctuation was reviewed,
too, obloslete license boy!
Roger had to know the material,idiot, since there is no idea
until the test is administered which questions are on the test.
And how could Roger possibly remember all of the over 600 or so
questions? That is, if he is a "hillbilly" like you claim.

> And I

More lies, just like your imaginary pilot's license.
Why didn't you remember that you upgraded from that Conditional
class license to Advanced?

> You get a give-away ticket and now

But, you still can't pass it, no matter how much you delude yourself. "Give away" ticket (which is the no code tech in reality) or not. If it's so easy and you are such a electronics expert, why don't you have one?
What's the matter, you're not afraid your obvious lack of reading skills would prevent you from getting it, are you?
You can use the excuse that it is for "elitists" all you want to, but you know deep down inside you just don't have what it takes to get it.

>(more excuses)

BWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!!
>
> First

First you claim I am not Roger, now you claim I am. Can't you make up your senile mind, you senile fuck?
Oh,and wipe your chin, you senile old fucking useless piece of shit. And change your colostomy bag, you're dripping again.

>
> Same code test I passed for the Advanced. So once again, want to get on
> the air for some code practice wogie?

No, you couldn't find that imaginary pilot's lcense, you probvably couldn't find your key.

Besides, you send like a fucking lame elephant......

And do keep thinking I am Roger, dumbass! It shows how owned you are.

> So where is your proof of this (whines,post edits and backpedals,oh,my! Butt Cornholer doing something dishonest! Oh,my!)

So where is your proof that Roger was made to retest because of "interference"??????

You are long on accusations and short on proof, sort of like how your wife finds you in the bedroom, shorty.

If you have both letters, don't forget the one YOU got from Riley, Gopher face, that would make three letters.

Here's what you snipped out because it proved you are a liar:

Here is the real retest letter, from Google, since it was posted to the newsgroups (probably by you) before:

July 11, 2000

CERTIFIED MAIL--RETURN RECEIPT REQUESTED

Mr. Roger L. Wiseman

610 Glen Haven Avenue

Glendale, WV 26038-1302

SUBJECT: Amateur Radio license KC8JBO

Dear Mr. Wiseman:

Pursuant to Section 97.519(d)(2) of the Commission's Rules, 47 C.F.R.
Section 97.519(d)(2), the Commission has the authority to re-administer any
examination element previously administered by Volunteer Examiners (VE's).
The Commission may either administer the examination itself, or under the
supervision of a Volunteer Examiner Coordinator (VEC) or VE designated by
the Commission.

Accordingly, we are requiring you to re-take the General Class Amateur
Examination, (Elements 2, 3(A) and 3(B)) under the supervision of an
American Radio Relay League Volunteer Examiner Coordinator. This examination
must be completed on or before September 11, 2000. The required code speed
that you must demonstrate is 5 words per minute.

Please be prepared to verify your current address and to present a photo
identification. Pursuant to Commission rules, your license will be cancelled
if you do not appear for re-examination. You will be granted an Amateur
Radio license consistent with the elements you pass upon re-examination.

Sincerely,

W. Riley Hollingsworth

Special Counsel, Amateur Radio

Enforcement Bureau

Now, where in the letter does it say "interference" was the
reason for the retest?
In fact, the only reason is as follows:

"Pursuant to Section 97.519(d)(2) of the Commission's Rules, 47
C.F.R.
Section 97.519(d)(2), the Commission has the authority to re-
administer any
examination element previously administered by Volunteer
Examiners (VE's).
The Commission may either administer the examination itself, or
under the
supervision of a Volunteer Examiner Coordinator (VEC) or VE
designated by
the Commission."

Looks like you lose, as usual.

Oh, and the required code speed at the time of retest was 5 wpm,
initially, Roger got his General with
the 13 wpm code speed in 1999.
Such a request is part of the Volunteer Examining program. It
could have been made for any number of
reasons that may have had nothing to do with any of the
addressee's actions. An investigation into the VE group that
gave the test, would be a good example.

Oh, and it isn't a "spank", dumbass. Learn what words mean
before you attempt to use them.
If Roger had his ticket pulled, that would be a "spank", DUMBASS!

[end restore]

But of course, you'll say it got chopped out in an accident with
one of your light planes.....you know one of those model planes
you fly and delude yourself into thinking you are a real pilot.

> >
> > No, you haven't. You only posted the ARRL press release about
> > it. You fucked up again.
> > And it alleged "malicious interference". Of course, one could
> > presume with equal validity, the "evidence" was fabricated
and
> > thus improperly presented. You lose.
>
> Nothing was (lies)

And your proof is????????? How do YOU personally know that
nothing was fabricated? Talking out of your fat ass again? No,
you don't have any proof, do you, DUMBASSED senile old fuck with
an obsolete license and an imaginary pilot's license.
All you can do is post a press release that doesn't give all the
facts.
"Caught red handed by Riley?" Hardly. In fact, here is the

letter (I know you'll snip it out, because you hate the truth):

November 09, 1999

CERTIFIED MAIL RETURN RECEIPT REQUESTED

Roger L. Wiseman

610 Glen Haven Avenue

Glendale, WV 26038-1302

Subject: Warning Notice: Amateur Radio License: KC8JBO

Dear Mr. Wiseman:

The Commission has monitoring evidence that you have been deliberately
and maliciously interfering with the radio operations of other licensed Amateurs on the 14 MHz Amateur band. This interference has
occurred at various times in the last several months and includes broadcasting music and other unidentified transmissions.

The Commission generally relies upon the Amateur Radio Service to be
self-policing. Operation of the type described above is contrary to
the basis and purpose of Amateur Radio and degrades the service for
legitimate users. This serves as a Warning Notice that such operation
will not be tolerated. Additional incidents of operation of the type
described above will result in a monetary fine being levied against
you and in revocation proceedings before an Administrative Law Judge.

You are requested to contact me at 717-338-2502 to discuss this matter.

Sincerely,

W. Riley Hollingsworth

Special Counsel, Amateur Radio Service

Enforcement Bureau

I notice too, he could not give any specific times or
frequencies this was supposed to have occured, which means when
you faked the tape you forgot to include them, dumbass!

It said "monitoring evidence (i.e. submitted tape)",which is a long way from being caught "red-handed". And tapes can be editied, and you should know, huh, that wasn't the first time you've sent in doctored tapes.

Which still goes back to the statement on the ARRL webpage about the FCC enforcement logs:

"NOTE: Issuance by the FCC of a Warning Notice indicates that the FCC has what it believes to be reliable evidence of possible rules infractions and not necessarily that the recipient has violated FCC rules."

http://www.arrl.org/news/enforcement_logs/2005/0521.html?nc=1 for example.

"Possible" rule infractions. Not Probable. Do list all the times and frquencies you've personally hear Roger interfere!
(I bet you snip this part out, too!)

> Sure (whiens and backpedals)

More excuses and backpedals, obsolete license boy?
It's all on tape, imaginary pilot's license boy. You really shouldn't jam Toadie's braodcast, no matter if they are in competition with your idiotic broadcasts. Sort of the lesser of two idiotic broadcasts.

>
> > I know you are too chickenshit to go see Roger in person.
> > BWHAHAHAHAHAHAHAHAHAHAHA!!!!!!!!!!!!!!!!!!!!
> >
>
> So you (whines, lies, etc)

Nope, Gopher face Tunder was too chickenshit to get out of his truck, he sat in it while it idled and called Roger on a cell phone. Too chickenshit to come knock on the door. And, he even pointed his truck for a quick getaway, poor thing. He really should have painted the bondo holding that piece of shit truck better,he rust spots showed through. He really could talk tough over the internet and even said he'd be back by for a second visit, but gopher face has yet to show his rat-boy face.
BWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA!!!!!!!!!!!!!

>
> So when is your next appointment with the mental health services?

Never had any to begin with.
So, when is your next court date about your molesting your own grandkids, imaginary pilot's license boy??

--
Illiterate and senile Butt Cornholer proves he has imaginary
spelling skills as well as an imaginary pilot's license in

Like I said, I never claimed you were a 'hillbilly', you said that. If I
said it prove it, but it must be true.

>
>
> First you claim I am not Roger, now you claim I am. Can't you
> make up your senile mind, you senile fuck?

Never claimed you weren't wogie, always knew you were two-test wogie,
you are the one who seems confused, curtains fatboy.

>
>>Same code test I passed for the Advanced. So once again, want
>
> to get on
>
>>the air for some code practice wogie?

> probvably couldn't find your key.

I see, in other words you can't copy code. LOLOLOLOLOLOL!!!! The key and my pilots license are right here, so want to get on for some code practice wogie? Name the time and frequency. Bet you can't even copy your own call. LOLOLOLOLOLOLOLOLOLOL!!!!!!!!!
>
> Besides, you send like a fucking lame elephant......

If I can't find my key as you claim, then how do you know? Make up you crack damaged mind curtains boy.

>
> backpedals,oh,my! Butt Cornholer doing something dishonest!
> Oh,my!)

I haven't backpeddled about anything, I have show proof of your letters from the FCC. So where is proof of what you claim about me, curtains boy? Show proof of this letter you calim I received from the FCC. And I ask you again to show proof of how you claim I don't have a pilot certificate. Just what name do you search the FAA database with to make this wild claim wogie? Put up or shut up fatboy.
>
> So where is your proof that Roger was made to retest because of
> "interference"??????
>
> You are long on accusations and short on proof, sort of like how
> your wife finds you in the bedroom, shorty.

Where is your proof of your claims about me, you are long on accusations but never have proved a single thing, two-test wogie.
>
> If you have both letters, don't forget the one YOU got from
> Riley, Gopher face, that would make three letters.

So show proof of this letter you claim I received, two-test curtains fatboy. Post it here fatboy so we can see it. Put up or shut up.

>
> Here's what you snipped out because it proved you are a liar:
>
> Here is the real retest letter, from Google, since it was posted
> to the newsgroups (probably by you) before:

Same old yada yade by wogie deleted.

So wogie, you deny you were sent a letter about your malicious interference on 20 meters?

>>>thus improperly presented. You lose.

You lose for violating the FCC regulations with malicious intereference two-test curtains boy. The FCC made you retest to keep your license. HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA!!!!!!!!
Did you remember to send Riley a Christmas present this year wogie for being you pen pal. Seems he like to write letters to you a lot.

HAAHAHAHAHAHAHAHAHAHAHAHA!!!!!!!!!!!!!!!!!!

>
>
> And your proof is????????? How do YOU personally know that
> nothing was fabricated?

So where is your proof of this fabrication two-test. The FCC caught you
red handed. LOLOLOLOLOLOLOLOLOLOLOLOLOLOL!!!!!!!!!!!!

Ahhh, my typos grow more numerous with age... declining is the word I meant to type...
As I said, this argument will go on, numbers decline, and always fixes for a non-existent problem will be applied, I have watched this for decades now--code is dead and no one will accept that--they won't even ask the people who WOULD get the licenses if that is true--and it is... I have asked...

As I look at it, hams are all a bunch which want to destroy the hobby and watch it die as freqs are stripped away and their numbers become too small to be of interest to anyone, let alone the FCC... they would ONLY do this if they wanted the hobby to die--but for some strange reason--wish to claim otherwise!!! ... go figure...

Warmest regards,
John

-- THE LAST HAM --

It was a warm sunny day, with just a slight breeze. Joe squinted at the top of his tower, admiring the five-element 20 meter monobander he had built the previous winter. It was an imposing sight, yet had never been used. Joe was the last ham.

Joe never intended to be the last ham, but it worked out that way. He thought back to how it had all started in the 80's when the FCC created the no-code Tech license. Joe considered that action the biggest blunder any government agency had ever perpetrated on the citizens of the United States of America.

"Just think of it," Joe had remarked, "an amateur radio license with no Morse code requirements! It will mean ruin for us all!" Joe ignored the fact that the no-code license brought new blood into the hobby after the amateur ranks had been shrinking for many years. He refused to notice that after the FCC created this new license category, the number of active hams increased at a dizzying rate.

Joe hated no-code hams. He wouldn't accept the no-code license as just another way of entering Amateur ranks, and refused to acknowledge that many no-coders upgrade to higher-class licenses. No explanation was good enough for Joe.

Joe and some like-minded cronies hung out on the local repeater, where they expounded at length their belief that the new hams are somehow less than human. They even suggested that the way to clean up the ham bands was to get rid of all 2-by-3 calls. They joked that everyone ought to own a no-code Tech. When new operators dared talk to Joe or his buddies, they found themselves humbled, scolded, and scorned.

In his zeal to control "his" airwaves, Joe monitored the local repeater with a stop-watch, to make sure interlopers "ID'ed" on time. If they went a little over, he gave them a tongue-lashing. He even harassed them when they operated perfectly, just to make sure they knew they weren't welcome.

Of course, Joe never gave his callsign when he did this. He regarded himself not as a jammer, but as a radio cop -- keeping the ham bands pure. Soon others joined Joe's cause. After all, "The new no-coders made two meters sound like CB!"

Slowly at first, then at a faster and faster rate, newcomers dropped out of the local clubs, then off the air completely. Joe was ecstatic. It was working; he was saving the airwaves.

The number of active hams dropped to far fewer than when he started. He figured only the "real hams" were left, so he didn't mind when the Callbook shrunk to the size of a comic book. But with so few hams, the political power of Amateur Radio diminished. Soon ham spectrum shrunk, too.

That didn't bother Joe; he cared only about 2 and 20 meters. He thought it was funny when the FCC auctioned many VHF and UHF bands, "those no-coder hangouts," to commercial interests.

Finally, citing "no further need for an Amateur license category," the FCC stopped issuing new licenses. Before long, Joe and his buddies were the only hams left. But that was fine. After all, they all got their licenses back when hams took tests at FCC offices, and not at one of those VEC jokes that allowed an applicant to take a test here or there.

Joe and his cronies spent long hours ragchewing on 20, bragging about how good things were. Occasionally they paused, but only to note when one of their clan became a "silent key."

Then, one day, Joe called CQ on twenty meters and got no reply. He tried again the next day with the same result. He kept trying for a week, but no one ever came back to him. Finally, he called one of his friends on the twisted pair, to set up a contact. But, an elderly-sounding lady informed him that his friend was no longer among the living.

Joe paged through his old, dog-eared Callbook. But he couldn't find a single listing of anyone he had worked recently. That's when he realized he was the only one left.

Joe had just started back toward the house when he suddenly tired. He at down to rest on the grass. He felt a squeezing pain in his chest, and his left arm ached. He lay back.

His antenna, and clouds drifting by above it, were the last things he saw. But Joe and his like-minded friends had lived long enough to accomplish their goal;

THEY HAD CLEANED UP THE AIRWAVES!

> I retort and call Lennie a BIG idiot.

Stebie forget "PUTZ," "gutless coward," etc. :-)

> He comes back with 12 paragraphs. Proves Christy's Law that my
>original assertion (he's an idiot) was correct.
>
> Christy's Law. It works

Who "Christy?" Musical group? New holiday? Stebie change
gender and be "Christy?"

Stebie not say. Stebie need "sked?" Good name be "Rosebud"
for snow sked. Fits.

>> Len has long replies. Sometimes really, really long replies. Do you
>> want to argue that, too?
>
> What's to argue? Lennie uses his verbostiy to hide his failings
>and inadequacies. It's legend.

Stebie have legend. Stebie be legend. Stebie is legend in his
own mind.

Stebie have myth? Wifie#2 find out, bye-bye Mithter Stebie.

...the sun sets on the Tomb of the Unknown Solder as a solitary
figure in a patch-adorned flight suit slowly paces out his lonely
path of anger, J-38 in one hand, bayonetted USMC soldering iron
in the other. Pre-recorded marine marches softly fill the air,
interspersed with dits and dahs of a few PCTA morsebirds not yet
extinct. The Tomb of the Unknown Solder is a lonely place, deep

in the valley of neuroses, anger, and frustration. The single sentinel counts cadennce to himself, muttering "flux you, flux you" between the slow steps. His fists are clenched, eager to do bottle but only sipping a cup of unkindness. It is sad but the sentinel at the Tomb of the Unknown Solder keeps going. He does not know why and that is the tragedy. The sun slowly sets on the Tomb of the Unknown Solder leaving only the red light of fire in the eyes of the muttering sentinel. Those glow in the dark like LED pilot lights. Hatred lives on in his twilight of despair.

Temper fry.

Yep... that is pretty much the mantra... you hear it around 60+ year old guys who don't realize they already are at the end of the line when it comes of being of importance to the hobby--so, being a vindictive lot, and in denial, now attempt to block the younger innovative hams with a current knowledge and education which they feel are a threat.... I all ready know all that, although my words don't spell it out so a person deep in the disease of Alzheimer's can understand, I have chalked the wall...

... somehow when you say "cleaned up the airwaves", I hear more "created a good ole buddies club of senior citizens".... <grin>

I know...:-) But, we have the solitary tomb sentinel busy
"guarding" the territory for ANY opinions other than his own.

We are stuck with the Avenging Angle of Dearth. Ho hum.

Eventually the "pop" will be an artery and he will become
the usual vegetable garden typical to stroke victims. We
will be able to see that while we are still alive. :-)

That is going to put a damper on his Class A behavior and
incessant machismo attitude of always "being right" (in his
own mind). His stress is building. Tsk.

Understand fully. They aren't ever going to be role models
of anything they way they act and posture in here.

Many years ago at a division of a national corporation there
was a long-time Amateur Extra near retirement age. He was a
good sort, knew his stuff, never tried to put his hobby into
the forefront as a Lifestyle. He also had a mischevious

sense of humor and was quite tolerant of younger staff getting way too overworked over their hobby discussions. When he found a couple of radio amateurs engaged in a heated argument he would listen a minute or so, then casually interrupt with "Say, did you know that ham is the butchered meat of swine?"

The arguers would be momentarily stunned. He would grin slightly and amble away, the grin growing. He had the right balance of priorities. He retired and showed up at some L.A. Council meetings since. Lost track of him. I've never forgotten that (correct) statement he made more than once. :-)

LOL...

That sound isn't the sky falling, it is the old guys falling out and leaving this world for a better place... this decade begins the big drop in number of old hams... what is 15% to 25% loss before 2010 expected... depends on whose numbers you go by, and ARRL isn't saying--I'd say that is one indication they are in denial and hiding from the problem... and much must be guessed, as there is that all burning question on people in the knows mind--after a ham passes how long is the avg time before his license will be in expired status? Figures are getting as bad as where you see dead people have been voting at the polls!!!!

Warmest regards,
John

Personally, I saw it for the humorous parody that it was intended to
be - not 'laugh out loud' funny, but humourous (and rather witty!)
nevertheless.

I understand that some may find that particular subject to be one that
should not be parodied - but, considering the obvious pride that the
author has in both his own military service and the service of others,
I would strongly doubt that any disrespect whatsoever was intended to
those whose ultimate sacrifice is honoured by the Tomb of the Unknown
Soldier.

My $.02 .

A good ham is one who strives to follow all rules and regulations pertaining
to amateur radio.
A good ham is one who strives to use good operating practices at all times.
A good ham is one who strives to learn and develop within the hobby.
A good ham is one who strives to help his fellow hams learn and develop
within the hobby.
A good ham is one who strives to give to the community via the use of his
hobby.

Look up the "Amateur's Code". I'm sure there's a copy floating around the
internet somewhere. That pretty well defines a good ham. It doesn't
include anything like code speed, date licensed, license class, types of
test available to take or any of that sort of thing.

There might not be so much frustration if they could understand enough
English to understand your problem. I delt with a help desk in India
over a credit card issue...never could get it across what my problem was
no matter how many ways I attempted to expalin it, when I asked to speak
to a manager, she hung up.
Maybe these companies will finally get the message that customers are
getting tired of dealing with people who can't understand enough English
to be of any help and bring the support centers back to the U.S. Don't
hold your breath.

Hello, Dan

A 1X2 call starting with "W" or "K"? How many of these folks do you think are around that are *not* in possession of a vanity call? C'mon! Give us a break! The original holders of 1X2 calls are mostly, if not entirely, sk. A dear friend of mine, W2ZS (almost the end of the 1X2 calls) has been sk for decades. Like about 3 decades.

My original call, issued in 1962, was WN2CJV. That would have made me WB2CJV had I passed the 13 word per minute code test. Unfortunately, it took me another year to get to 13 and I obtained WB2OSP in 1964.

With the issuance of vanity call signs, most of the 1X3 calls are gone - mostly vanity call signs. Depending upon the call district, some of the states were as far as a WD prefix.

Since I doubt many folks would spend money to get a call sign beginning with WA, WB, etc., those are the folks that you can be certain have been licensed since the early 60s. I did obtain WA3RJX in 1970, however, when I moved to Pennsylvania. Still, had I kept that call, it would be 35 years old! Moving back then might also require a call sign change - along with a "newbie" type call sign.

When the FCC allowed extra class licensees to choose their own call sign in the early 70s, I obtained N2JH. At that point, I'm not sure if they would allow you to grab an old expired call.

Once the gates were opened for vanity call signs, all bets are off as to how long an amateur has been licensed. My bet would be that the WA and WB type prefixes would be the only ones that would *almost* guarantee the individual has been licensed long enough to qualify for the quarter century club. It won't be long (and may have already happened) that there are some 5 word per minute folks with a 1X2 call (which means fairly new hams).

I have to ask what the heck you were thinking with your response that a 1X2 or 1X3 call indicates an old timer?

???
:)

I know a few with N8*** that are/were 5 wpm and were licensed in 1983 or
earlier, I don't think that would make them fairly new hams. A few more
years and they will qualify for the quarter century club.

Nope, Gopher face Tunder was too chickenshit to get out of his truck, he sat in it while it idled and called Roger on a cell phone. Too chickenshit to come knock on the door. And, he even pointed his truck for a quick getaway, poor thing. He really should have painted the bondo holding that piece of shit truck better,he rust spots showed through. He really could talk tough over the internet and even said he'd be back by for a second visit, but gopher face has yet to show his rat-boy face. BWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA!!!!!!!!!!!!!

I wasn't groaning about the thread but about Vipul rejoining the group with the same old tired rants that he had before. He thinks that hamfests and ham radio should be a place where he can pick up sexy girls. Since he keeps getting that illusion shattered, he rants and raves about it.

It's worse than you think. The US politicians seem addicted to using overseas
call centres. You'd think they would keep the jobs at home, being your public
servants and all...

==========

Georgia is one of 32 states using the same two call centers in India and another
in Mexico for Spanish-speaking callers.

Actually, it is a sharp and pointed piece of satiric sarcasm
that is unmistakably aimed at our Last Action Hero (seven
times) in here. :-)

>I understand that some may find that particular subject to be one that
>should not be parodied - but, considering the obvious pride that the
>author has in both his own military service and the service of others,
>I would strongly doubt that any disrespect whatsoever was intended to
>those whose ultimate sacrifice is honoured by the Tomb of the Unknown
>Soldier.

There's a very simple ceremony done in the U.S. military,
or at least was, and I'm not sure of other branches
besides Army. It is called "Retreat" and done at the
beginning of sundown, coincident with lowering the Flag.
Most times it is done simply by a group accompanying the
Flag handlers. Sometimes it has a simple dedication to an
individual or individuals. One "stands a Retreat" out of
respect, to honor all that went before. Anyone who "stands
a Retreat" will understand. Others, especially those never
having served, will dismiss it as simply lowering the flag,
just another excuse by the military for some kind of ceremony.
They cannot feel the ceremony within. They are not a Part
of it.

There's another curious-to-non-military-persons custom or
rather attitude which pertains to Unit Recognition. Navy
personnel express that by a pride in "their" ship. Other

branches will identify with their Unit or work identity. It is sometimes referred to (technically) as Unit Cohesiveness or (familiarly) as Teamwork or perhaps just inwardly as Pride in what one does.

In my case I had that sense of Unit with the Signal Battalion I was assigned to. I had no choice in which unit, yet grew to feel a part of it, of identifying it as "my" battalion. I took pride in doing my assigned work. I learned of the unit's origin, how it changed over time, saw how it kept changing while I was there...and kept track of it even long after my Honorable Discharge was given me in 1960.

What I find truly abhorrent, distasteful, disrespectful, and quite sickening is the charges of "dishonor" leveled by a hateful little emotional loose cannon in here done for no other reason than he hates some people and cannot hold back his rage and anger. What adds to the abhorrence, distaste, and disrespect is the self-perceived NON-serving veteran who wants to "chide" others for their "mistakes" about the U.S. military when they are (supposedly) U.S. citizens. Their whole reason for their "charges" are based on nothing but trying to "win" some argument over a subject...using those rather obvious false charges which have NO relationship to the subject.

Simple summation: Jimmie be too uptight and anal; he needs to get laid.

>My $.02 .

...and now mine...plus shipping charges...Jimmie gets bill.

This has departed from "amateur radio" subjects but, given, the overall anal-retentive attitude in here of trying to tie together military forces with a HOBBY involving radio (which is NO tie at all), I felt it had to be said.

We can now resume the usual PCTA Extra Double Standard banner waving long in progress. The Morsebirds are twittering in full song...

>Look up the "Amateur's Code". I'm sure there's a copy floating around the
>internet somewhere.

...including the ARRL who first published it well before WW2.

Note especially #2: "The Amateur is Loyal...He offers his
loyalty, encouragement and support for his fellow radio
amateurs, his local club, and to the American Radio Relay
League, through which amateur radio is represented."

It has been in the front of annual ARRL Handbooks in the
1970s and should be on the ARRL website now.

Oh, my, a bit self-serving the League was, wasn't it?

In the 1920s the ARRL had not yet attained their virtual
monopoly on national amateur radio membership organizations
in the USA. The ARRL was striving for being #1 then and
were starting to get ahead through the first of its many
publications. That sort of self-serving "patriotism" was
designed to (subtly) develop League Loyalty then. It's a
GOOD technique for organization survival. It WORKED.

"Through which amateur radio is represented." NOT quite a
full truth. The ARRL is most definitely NOT a true
government representative for the radio amateur. The ARRL
membership is only 1 in 5 of all radio amateur licensees.
EVERY U.S. citizen's TRUE representatives, radio amateur
or not, is their elected government officials and the FCC
itself. All of us have the perfect RIGHT to go direct to
the FCC and voice our own opinions on radio regulatory
matters. There is NO NEED (except by the ARRL itself to
survive) to use the League as an "amateur's representative"
to our government.

The ARRL "represents" ONLY the valid, licensed amateur and
then only 1 in 5. All others can forget any possibility of
"representation" to our government. That's just the way
it is...

Da, Comrade Leo! I am KGB, parashoot in from Bear bumber
vid agents Brubitsch, Borbitsch, and Garbitsch!

Dosvedanya.

//
/////

Leninie, old Lennie..

You are such the Groucho Marx of this group.

Your self-serving 'humor', real or perceived, affords us hour upon hour of poring over your never ending and overly verbose attempts at rivaling the comedians you attempt to emulate.

Oh, wait. You have no desire to emulate others, do you? You perceive yourself as a unique individual who, in his seventy plus years, entertains himself with banal nitpicking coupled with a healthy dose of overbearing condescension.

You live in a smug little corner of your making, Len. Thank goodness you live there alone. It is obviously a lonely corner.

As was posted prior, thank you for the humor. You are perhaps one of the most talented of Trolls in these groups even though you often err with the basics.

You are very good at doing Back Flips when so doing serves your purposes.

So there you have it, Lennie. Age aside, many of us enjoy your Septgenarian diatribes/comments and find great humor in same. We shall bear with you as you author five, six, and ten or more paragraphs. We won't read them, but we will bear with you as we fast forward to the bottom and look for the "punch line", if indeed there is one.

And, Lennie. Just as Leo is a 'real' and accepted entity (in your eyes), and a "real" Ham, so also is Arf! Arf! Because you accept one and deny the other has little to do with their existance. Your self-exalted opinion of which of the two is 'real' has (Gasp!) no bearing in this group.

Nobody cares. Your opinion, Len, means squat.

2151. Lennie Is A Nit Who Should be Picked

You ARE dishonorable, Lennie.

Over the course of 3 years or so you've repeated these stories
about Soldiers you didn' know who died in combat before yo were even
inducted in such a way as to associate YOUR lame rear-area,
non-combatant radio mechanic duty with them for your own
glorification..

That was disgusting enough.

Now you've tried to score your self-proclaimed "newsgroup
messaging points" with this purile "parody" of the Tomb of the
Unknowns.

I just can't manifest language intense enough to describe how vile
I find THAT without using profanity in a public forum

Lastly, you do so while insulting the participants in an avocation
for which you have utter disgust, have blatantly lied about, and have
no intention what-so-ever of being the least bit helpful for.

"Scumbag" pretty well sums it up.

In short, "we" don't really care what YOU find "abhorrent,
distasteful and disrespectable"...because you ARE 'abhorrent,
distasteful and disrespectful'.

Marine Corps is capitalized, just like Air Force, Brain...

> And why can't you explain why you posted my street address on RRAP?

I didn't post your "street address" on RRAP, Brain...

A street address consists of a house number, apartment or suite if
applicable, and the name or number of the street.

EG: 151 12th Avenue Northwest. That is a "street address, albeit
not a complete "mailing address".

A "mailing address" consists of a full street address or
appropriate box number, a city, state and postal code where postal
codes are employed. The name of the country of the destination address
is the last line if different from the originating address.

I'd think after having been deployed overseas and, I assume,
having mailed things home before that you'd kow this bit of
information.

So...you want to try again...?!?!

Steve, K4YZ

2154. Re: Lennie Is A Nit Who Should be Picked

You ARE dishonorable, Lennie.

Over the course of 3 years or so you've repeated these stories
about Soldiers you didn' know who died in combat before yo were even
inducted in such a way as to associate YOUR lame rear-area,
non-combatant radio mechanic duty with them for your own
glorification..

That was disgusting enough.

Now you've tried to score your self-proclaimed "newsgroup
messaging points" with this purile "parody" of the Tomb of the
Unknowns.

I just can't manifest language intense enough to describe how vile
I find THAT without using profanity in a public forum

Lastly, you do so while insulting the participants in an avocation
for which you have utter disgust, have blatantly lied about, and have
no intention what-so-ever of being the least bit helpful for.

"Scumbag" pretty well sums it up.

In short, "we" don't really care what YOU find "abhorrent,
distasteful and disrespectable"...because you ARE 'abhorrent,
distasteful and disrespectful'.

Putz.

Steve, K4YZ

Wow! You pretty much put the icing on Lennie's cake, Steve.
Of course it goes without saying that Lennie will HAVE to post a three
chapter response.

You know Len. Never say in one sentence that which he can better say in 18
paragraphs.
Bets are on that Len will post a novel in response, though none of us will
read it.

Snipppppppppppppppppppppppppppppppp ! ! !

Hans, why don't you just go out to the barn, put a rope over the
rafters, tie it off so one end is about 7 feet in the air.

Then loop one end around your neck while standing on a ladder.

Then rock the ladder until it falls away, leaving you and your
cynicism to swing in the cool Minnesota breeze.

Sheeesh. Why get up and shave tomorrow...?!?! Why not just go
ahead and cut your throat if the future is so bleak to you...?!?!

Don't know why anyone pays *any* attention to lennieboy, he isn't a ham,
too dumb/lazy to become one so he has no skin in the game. What he has
to say is of no revelence at all. Just ignore him completely and maybe
he will eventually go away.

> > Lennie's not a parent, if we follow his own logic.

Not exactly correct. He's never mentioned being a parent, that's all.
Given his tendency to tell us all about himself in extreme detail, it's
unlikely he is a parent, but not impossible.

> The United States military used NON-morse HF communications
> for the major tactical/strategic radio communications since
> 1948.

What does that have to do with "young'uns in ham radio", Len?
btw, the US military *did* use Morse Code for a variety of
communications purposes long after 1948.

> >Therefore, that being the case, and Lennie having failed to

Actually it's about "young'uns in ham radio". The experiences
of parents do have a direct bearing on that subject.

> >> > You are very wrought-up on this subject of "parenting."

Babysitting is not the same thing as being a parent, Len.
Good parents are responsible 100% of the time. They can't
give the kid back.

> Stebie, the self-appointed "ethnic puritan" of this

> Stebie is a NURSE.

Among other things.

> (James Miccolis) will NOT
> reveal what HE works on or for.

That's right.

Is there *any* job I could hold that would change your mind
about me and my opinions, Len?

> ..other than letting slip once
> that he "works in vehicular technology" (in one of his
> comments on one of the 18 Petitions for amateur radio
> restructuring.

If that's what you got from those comments, you need to
work on your reading comprehension, Len. I doubt very much
that "works in vehicular technology" was in my comments.

> "Quitefine" is NOT a member of the worldwide
> Institute of Electrical and Electronic Engineers (IEEE), a
> professional association.

Neither am I, Len.

Membership in any professional organization has nothing to
do with the qualifications to be an amateur radio operator.
Nor does it have anything to do with "young'uns in ham radio".

So why go on about it?
>
> >> That pretty much says it all - *you* have a problem

>
> The "surreal" part of Miccolis and Robeson's diatribes is
> that:
>
> 1. No pediatrician is required to be a "parent."

But *all* pediatricians are required to have extensive training
and practical experience with children. They are required to be
certified and licensed in a variety of ways to do their jobs.

Are you a pediatrician, Len? Are you trained, licensed, and/or
certified in *any* medical/pediatric specialty?

> There is NO
> such "requirement" in any academic organization to "be a
> parent" in ANY degreed/titled work involving children OR
> procreation of children.

But *all* in those jobs are required to have extensive training
and practical experience with children. They are required to be
certified and licensed in a variety of ways to do their jobs.

Are you a teacher, Len? Are you trained, licensed, and/or
certified in *any* educational/academic specialty?

> 2. (Miccolis) seems to disregard laws of physics
> in that ALL radios work by the SAME physical laws,
> regardless of human designations as to their application.

That's just plain wrong, Len.

> [inconceivable that a claimed double-degree individual
> would insist that ONLY licensed radio amateurs (who have
> obtained a federal merit badge only in amateurism) can
> express any opinion at all.

It's inconceivable because it's not true, Len. I've never said
that you or anyone else can not or should not give their
opinion.

What I have done is to point out your lack of qualification
and experience in certain areas.

You, on the other hand, have actually told people to shut up.

Big difference.
>
> 3. In the United States of America, ANY citizen has the
> RIGHT
> to comment to their government on ANY law or regulation
> REGARDLESS of whether or not they have any "license" or

Who has tried to deny you that right, Len? Not me.
>
> 4. Neither Miccolis nor Robeson have ANY
> "authority" to RULE on U.S. amateur radio regulations,

Nor do you, Len.

> yet the seek to bar, to subjugate, to eliminate ANYONE
> BUT licensed radio amateurs from even talking about it.

Len, that's complete and utter bullshit. There's just no
other word for it.

I challenge you to show *any* evidence or example where I have
tried "to bar, to subjugate, to eliminate ANYONE BUT licensed radio
amateurs from even talking" about *anything*.

C'mon, Len. You've made that bullshit claim over and over again.
Now show us where I ever did anything of the sort.

I don't think you can.

> Apparently those two control freaks do not understand
> that NO FCC Commissioner or staff member is "required"
> to possess an amateur radio license in order to offcially
> regulate U.S. amateur radio.

SHow us your evidence, Len.
>
> 5. Miccolis- has NOT YET stated how many offspring
> HE has parented.

Why should I? Would it make any difference to you?

> He implies he has

Where?

You're not the FCC, Len.

> Both of these control freaks have been invited to take their
> "authority" and "shove it up their I/O ports."

Gee, Len, you've really made your point.

Seems to me, Len, that you can't take *any* opposition to your
views. If someone points out your lack of qualification or
experience, you think they are telling you to shut up, even
though they're not.
>
> They never did it. However, they might have...and enjoyed
> it.

Is that your idea of a good time, Len? ;-)
>
> >> > Tsk, tsk. A radio does NOT operate by different laws of

> of their given names.

Well, you can't be talking about me, then. All I call you is "Len" or
"Mr. Anderson". Or maybe some combination of those names.

> Miccolis is NOT my "peer."

Why not, Len?

> He has not identified his actual
> place of employment, has not identified his own "parenthood"
> (which he REQUIRES of others)

No, I don't.

> , and has claimed to be a "radio manufacturer."

Yep. I'm with Southgate Radio. Not my day job, of course.

Here's a hint, Len: "Manufacture" means to make something. So anyone
who makes a radio set is a radio manufacturer.

> Tsk, he is not even a member of any
> professional association.

How do you know?

If I join IEEE, will I become your peer?

> >> And you said there must have been fraud involved.
> >> You accused ARRL and
> >> the VEs involved of dishonesty. Right here. That's a fact.
> >> Shall I
> >> repost those claims?
>
> Tsk, tsk. I wrote, some time ago, that the ARRL "sins by omission."

No, that's not what I'm referring to. It's about the licensing
of six-year-olds.

> They do so often, especially in their publications
> on the history of radio.

Such as? Tell us where it's actually done.

>
> > Our local club recently added two new licensees...both

2165. Re: Why not more young'uns in Ham radio

Newsgroup: rec.radio.amateur.policy
Date: 2005-06-04 14:09:26 UTC
From: John Smith <assemblywizard@gmail.com>
Message-ID: <tCioe.166$eo2.26538118@news.sisna.com>
Source record: 109396

No, you just face reality, always put real facts, figures on the table, change what you can, attempt to stay relevant, fix what you can immediately, have an outlook that you are in it for the long run and have the patience to wait until the future opens up so other things can be set right later on. Crawling in to a hole, hiding from reality or taking the easy way out with a barn rafter seems to be the method too many are already doing...

Snipppppppppppppppppppppppppppppppp ! ! !

Hans, why don't you just go out to the barn, put a rope over the rafters, tie it off so one end is about 7 feet in the air.

Then loop one end around your neck while standing on a ladder.

Then rock the ladder until it falls away, leaving you and your cynicism to swing in the cool Minnesota breeze.

Sheeesh. Why get up and shave tomorrow...?!?! Why not just go ahead and cut your throat if the future is so bleak to you...?!?!

Steve, K4YZ

I became eligible for QCWA this year (it goes from January 1st of your 25th year since getting a ham licence of any class anywhere in the world), but there's no chapter near here, AFAIK, which makes me less inclined to join. I was first licenced in the UK (as a no-coder, LOL!) so my US call isn't indicative of when I was first licenced. I'm not sure exactly when the US call allocation system was changed, but I understand that it was more than 25 years ago, so there are some original 1x3 'N' calls that would be eligible for QCWA now. I beleive that someone with an N3C__ call told me it was issued in 1980.

73 de Alun, G8VUK, N3KIP

Licensed since 29th February 1980

I was referring to the fact that W/K prefix followed by a number then two or three letters is considered an old timer callsign.

The fact that the FCC has totally screwed that up is not relevant.

I disagree with Vipul on this one. Five WPM wasn't enough to be
accepted as a full ham by many practioners of the ancient art.

> >> Is it being accepted by certain other hams?

What belief system do you share?

> What was YOUR point?

What was your point in saying, "Lessee....430?"

> > Without acceptance, one cannot be a "true" ham.
>
> Sure you can.

I agree with Steve on this one. You just have to ignore the
knuckle-heads that would put you down for not attaining ever higher
Morse Code speeds.

> Lennie doesn't accept ANY of us...

Not true.

> Does that mean we don't exist?

You exist in a negative way.

> Once and for all, Vipul...
>
> There is no one person, group, organization, entity or "belief
> system" that dictates what makes a "good ham".

Not according to Larry, Dick, or Kelly.

Unfortunately, if only more amateur on here would come forward and
condemn those who exhibit the characteristics of a "bad ham," such as
yourself...

Most Indians speak very good English, at least in the cities, AFAIK. I've never been to India, but all the Indians I've met elsewhere spoke perfect English, albeit sometimes heavily accented. They have many different languages and use English as a lingua franca to talk to other Indians in their own country, so complete fluency is more the rule than the exception.

Of course, they do speak what you would regard as British English, but I understand that the call centres all give training in American colloquialisms. I've never had the least trouble communicating with anyone in Indian call centres, but then I am British, after all. Perhaps you will all have to learn the Queen's English? It makes a change from learning to label your rubbish 'basura'. Perhaps I could offer classes in how to communicate with call centres in proper English. Note that they are call 'centres', not 'centers'. The British Empire strikes back!

They always seem particularly pleased to hear an English voice on the line, and sometimes ask me if I like cricket. I think it is a relief for them not to have to talk American. They can get quite chatty. There was one funny incident when I asked one of them if he was in India and he told me that he wasn't allowed to answer that question!

Would that be the "give away license" that you made reference to in
another post? You do realize that there are still Tech's out there that
took the old Novice and then upgraded to Tech by doing the general theory!

I agree. My experience with american call centers has been about as good as those that appear to be located overseas. The quality of the response is directly related to the skills and knowlege of the individual - their location has little to do with it. Tucson, Arizona has numerous call centers operating there, and I would guess many of the operators have a non-U.S. accent as well. When calling a call center my purpose is to get information. I've found that by staying cordial and sometimes repeating a question that I get the results I'm looking for. Some on this forum(not you) seem to be more focused on insulting the operators and generally causing problems. They must have a lot of free time.

I wondered if anybody remembered him! I know Kim would. I asked about
Larry because in his book, you couldn't be a "real ham" unless you
thought like he did, of course you needed to enjoy CW to be real!

Hello, Alan

Thank you for your kind offer, but I have a few friends in the U.K. who have kindly offered to teach me the Queen's English.

I did catch some flak one time when I created a database and had a sub-category of "moulded" components. We tend to drop the letter "u" over here quite a bit. And we had better, given the political climate over here :))

Unfortunately, I have no idea if I can set my spell checker for the Queen's English; if I could, I most certainly would as I would use it especially to communicate with a couple of extreme right-wing friends on the net ;)

For what it is worth, my grandfather (my father's dad) was Scottish; he emigrated to the U.S. when he was 7 years old.

73 from Rochester, NY

Most humorous when you remember that he has frequently attempted to deride me by referring to me as "Mama Dee" when I use family examples to illustrate talking points. I only use them as examples where the above paragraph shows that he thinks he should be able to actually exercise parental type control over other people.

Sure they do.

But your mentor uses the term "belief system" as if it were dirty.

He has "belief systems" too, but they don't seem to include
honesty, trustworthiness or strength of character.

Gee, Brain...You got the point but didn't even knoiw it...

There's no "rule"...Yet Vippy seems to think there is.

Good for you.

> > > They are often older, and male.

I am humiliating Vipul.

HE seems to think that there's some black undertones to Amateurs
using subject-specific terminology.

I have pointed out to him, repeatedly, that there is NO human
endeavor that doesn't ahve it's own "lingo".

> > > They like to discuss ham politics.
> >
> > As opposed to roast beef politics...?!?!
>
> Chicken politics. Squawk, squawk. Like saying "Lessee....430" without
> explanation.

No expalnation is necessary.

Just like no explanation for illegal operating from Somalia.

Or for what "major role" unlicensed devices play in "emergency
comms".

And don't forget those overblown ARES folks who won't respond to a
callout...

Still waiting on those, Brain...

> > > There are other characteristics of a ham, which I will not list.

"Many"...?!?!

I would interpret "many" as to be a significant percentage. What's
YOUR call, Brain? 10%? 35%? 50%..?!?!

From what demographic do you get your data?

> > > >> Is it being accepted by certain other hams?

> >
> > What belief system do you share?

Hmmmmm? Which one? I am basically conservative in my politics. I
am a former Paramedic and and presently an ACLS Nurse. I am a licensed
aviator.

Not to mention a 30+ year licensed Amateur.

> > What was YOUR point?
> >
> > What was your point in saying, "Lessee....430?"

What was your point in "Somalia", "unlicensed devices", "ARES",
etc etc etc?

> > > Without acceptance, one cannot be a "true" ham.
> > >
> > > Sure you can.
> >

> I agree with Steve on this one. You just have to ignore the
> knuckle-heads that would put you down for not attaining ever higher
> Morse Code speeds.

Then I can assume you now publically acknowledge that I have
stated, now and in the past, that being a 20+WPM code deamon is not a
prerequisite to being a good Amateur?

> > Lennie doesn't accept ANY of us...
>
> Not true.

He doesn't. He talks nice to you because of your public expression
of "admration" fro him in the face of copious evidence that he's a
chronic liar.

> > Does that mean we don't exist?
>
> You exist in a negative way.

No more or less than you, Brain.

> > Once and for all, Vipul...
> >
> > There is no one person, group, organization, entity or "belief
> > system" that dictates what makes a "good ham".
>
> Not according to Larry, Dick, or Kelly.

Oh?

Where?

I've enver seen one of them state that one and only one person,
group organization, entity or belief system is the only true one.

Quotes, please.

> Unfortunately, if only more amateur on here would come forward and
> condemn those who exhibit the characteristics of a "bad ham," such as
> yourself...

But what transpires in here is NOT "Amateur Radio".

You can discuss my on-air operating with K0HB, K8MN and N2EY if
you care to.

N0IMD is not in my log, on ANY mode.

> > > Could it be the date they were first licensed, or maybe the class of

Every bag of potatoes has one spoiled in it.

Bruce is Amateur Radio's spoiled potatoe.

You'll please note that no one here with an Extra, other than
Bruce, LIKES Bruce.

Obviously not. Jim (GXW) called it a "give away" and Vipul
agreed.

I agree that it's almost childishly simple to get, however folks
still manage to fail it at a regular basis. It's still not a "give
away".

> > And despite the fact that the license IS markedly easier to get

They are current licenses - as opposed to expired licenses,
cancelled licenses, revoked licenses.

> Jimmie loves wordplay, spending long hours at his old, faded

This is true; I had the call N2JH back in the 70s. The N prefix was made available to amateurs sometime in the late 60s, but I'm not sure exactly when. My point, however, is that a WA or WB prefix pretty well indicates someone who has been licensed for 40 years or so (depending upon district). My WB2OSP license was issued in 1964, so figure the WA2 calls were a few years earlier (WB2CJV would have been in May, 1962).

My point was that no one, I suspect, would apply for a WA or WB prefix under the vanity callsign rules. This would, to me, certify that individual as an old-timer. As to the 1X3 calls with a prefix of "W" or "K", my point is that most of them have probably been issued as a vanity call after the FCC started that sometime in the 1990s.

I knew Dwight Hill, K2BRE and he has been an sk for quite a while. Were he still alive, he would be close to 90 years old. Certainly, there are some still around with us with a 1X3 issued back in the 50s or earlier (Wayne, W2NSD comes to mind), but I suspect *most* current 1X3 or 1X2 holders are holders due to having a vanity call.

Dan's point of a 1X3 being an indicator of an old timer does not hold water. I'd bet if you averaged all of the years the 1X3 tickets have had an amateur license, it would be *less* than the average of all the WA and WB prefixes (I could be wrong, but the WA WB prefixes are mostly well over 40 years old - at least in the second call district). My friend, Tim, WB2KAO, was licensed around 1963 and has his original call. He isn't an old timer due

to that WB prefix? 42 years of being licensed? This would be typical of a WA or WB prefix. Unless you can tell me someone who got their WA or WB prefix using the vanity call system.

73 from Rochester, NY

>
> Quotes, please.

Dick quit being a VE because he didn't """believe""" that the new
people were worthy of his time. Larry is on record numerous times
telling everyone who tripped over his postings that he was better than
everyone else. Kelly, well, he Kelly.

> > Unfortunately, if only more amateur on here would come forward and

Hi!

> You'll please note that no one here with an Extra, other than
> Bruce, LIKES Bruce.

I don't care who likes whom. I merely stated that most of the
trouble-makers are Extra licensed amateurs, and I stand by my
statement.

> > > > As for the class of

Those who feel they have to agree with ham beliefs, or at least play
lip service to it or else feel the scorn of the hard-boiled hams.

> > > >> Can somebody who gets into amateur radio today with the "give away

No. Very much unlike those. Exactly like my house number.

> Steve, K4YZ

I just can't understand why you would post my house number prior to the
Dayton Hamvention unless you planned on stopping by while you were in

Ohio.

Were you planning on stopping by? Didn't you have something to "teach"
me?

2185. Re: What makes a real ham?

Sounds to me that many here have confused the idea of "a decent human being" with a "ham"... true, the best type of ham is both a "hobbist radio operator" and "a decent human being"... however, I am not so sure the FCC is into regulating that one trait...

John

2186. best to avoid racist terms

Newsgroup: rec.radio.amateur.policy
Date: 2005-06-04 18:53:34 UTC

Best to avoid racist terms such as "paki". It's right up there with "nigger". "Monkey" is no better - only applied from what I see to non-white persons, it's at about the level of "boy".

> I didn't take the free upgrade to general,

There's no free upgrade to General.

If someone earned a Technician back when that license used the same
written as the General, they can get a no-additional test
upgrade to General through the VE system. FCC recognizes old
(pre-March 21, 1987) Element 3 as carrying credit for new
Element 3.

But you still have to pay the VE fee, and have earned that
Tech in the first place. Not a giveaway or a free upgrade.

> 20 years ago.

Actually I we should go back to those "mores, values and
expectations of the yesteryears" - in a way.

Look at the old ham mags and other publications (ARRL
and non-ARRL, doesn't matter as long as it was a ham-
oriented publication) of the
so-called golden years of, say, the '50s. Back when we had
annual growth of about 8% year after year. They *weren't*
specifically aimed at "young'uns". The license requirements
weren't reduced (as NCVEC and others want to do) to make
the tests easier for kids to pass. The "Beginner And Novice"
columns weren't aimed at teenagers or any other age group.
And that may be a big part of what made them so attractive
to kids!
>
> > > If it's a numbers game why not shift gears and

See above - I'm thinking the trick is to *not* target *any* age
group.

> holders due to having a vanity call.
>

They did not run out of sequentially issued 1x3 calls until sometime in 1993 (varying slightly by call area). Sequentially issued 1x2 calls were still available in come call areas into the early 1990s. The 1x2s really went fast in late 1980s and the very early 1990s. I knew a great many hams who had finally chosen to upgrade to Extra so that they could contribute to amateur radio by becoming VEs and got their 1x2s. Although you didn't have to be an Extra to be a VE, you were limited on who you could administer tests to if you were not.

I received my call (N8UZE) in 1992 and my daughter received her call (N8ZNW) in 1993.

> Dan's point of a 1X3 being an indicator of an old timer does not hold
> water.

Definitely not. Many holders of 1x3 calls got their licenses in the 1990s and many new licenses today are getting 1x3 calls through the vanity system since there are none available for sequential issue. However if one looks only at the sequentially issued calls, the Ws are older than the Ks which in turn are older than the Ns.

Well, don't expect him to change any time soon. He's tried
the same thing with me (10048 being my house number) except
that my entire mailing address has been printed in HR in
every article (common procedure in amateur radio periodicals).

The solitary tomb sentinel has an ugly habit of bullying
others to "gain supremacy" or something similar. He can do
so in relative "safety" from the time-distance isolation of
this medium. Bullies take advantage of that "protection"
(and usually act a lot "tougher") but all it shows is ordinary
cowardice.

>> >I tire of Steve's incessant lying. I tire of his peers always giving

>Careful, now. You might upset the mighty machismo morsemen, especially
>"Jimmy the Riveter."

Heh heh heh. I'm not worried about Jimmie. He gets upset so
easily, thinks I am "calling him names."

Tsk, tsk. I've called him all sorts of names: James, Jim,
Jimmy, Jimmie, James Miccolis, and just Miccolis. He feels
so "insulted" now about being called all those NAMES that he
just wastes everyone's time.

Ham radio has certainly changed since I first heard about it
back in the 40s. So many uptight folks in it now, so easily
bruised, some wanting to bully, terrorize, and FIGHT! :-)

...the sun sets on the Tomb of the Unknown Solder as a solitary
figure in a patch-adorned flight suit slowly paces out his lonely
path of anger, J-38 in one hand, bayonetted USMC soldering iron
in the other. Pre-recorded marine marches softly fill the air,
interspersed with dits and dahs of a few PCTA morsebirds not yet
extinct. The Tomb of the Unknown Solder is a lonely place, deep
in the valley of neuroses, anger, and frustration. The single
sentinel counts cadennce to himself, muttering "flux you, flux
you" between the slow steps. His fists are clenched, eager to do
bottle but only sipping a cup of unkindness. It is sad but the
sentinel at the Tomb of the Unknown Solder keeps going. He does

not know why and that is the tragedy. The sun slowly sets on the Tomb of the Unknown Solder leaving only the red light of fire in the eyes of the muttering sentinel. Those glow in the dark like LED pilot lights. Hatred lives on in his twilight of despair.

Temper fry.

Hello, Dee

I am pretty sure you are correct. I also believe that WV2 was the novice prefix which would turn into WA2 when the tech or general was obtained (no quick routes to the extra back then; you had to have some time with a license before you could even take the test). WN2 turned into WB2. Not sure about the K prefix. The novice goes back into the 50s, I believe.

You are right, when the Ws were exhausted, they ran through the Ks. Then they started with WA and so on. The N prefix became available in the very late 60s or very early 70s. WA and WB predate the N prefix.

Still haven't heard from Dan. Perhaps we could sked for a nice chat - as long as he can put up with a "newbie". Better keep it slow, say 30 words per minute cw with no automated copy devices. I suppose if he pushes me, I might consider 40. Not much more, however; I'm not up to that stuff anymore. Of course, if push came to shove .... I might be willing to give the high-speed stuff a crack, but don't expect much from a former WN prefix.

If he *really* wants to push the envelope, I'd be willing to take a week and meet him using American Land-Line Morse. Should be good for a hoot. No more than 16, however, as I'd be using a mental look-up table. Not enough call for land-line Morse to make it worthwhile to get good at it. I only used it once in 1968. Of course, I hadn't copied Morse since 1969 when I retook the extra in 1993 .... at 20 words per minute .... ;)

73 from Rochester, NY
Jim AA2QA, newbie extrodinaire
ps - the new guys and gals deserve respect too. I guess I just didn't care for his implication on the prefix.

And people then wonder why the tech support "monkey" in India is so
surly. If you lived in Bangalore and had to work from 9pm to 5am doing
tech support for Americans who call you "paki" all the time, you'd be
mad too.

I know that most Indians speak good English, and I have no problem
with their accent. But I had one once who apparently did not
understand English. It was as if he was reading from a script and was
expecting a certain answer back. It was VERY frustrating. Perhaps if
these call centers were a little more discriminating in who they
hired.

Novices who got K calls were KN, the N being dropped with upgrade. When
I got my Novice I recieved a K call, friends who were licensed at the
same time got WN calls which became WA on upgrade. The WA lasted until
they ran out of A's then they started issuing WB's.

Yes it is, and yes I am. So what? The general theory was mainly concerned
with freqs used by Generals and HF stuff. At that time in history the Tech
test was centered around V/Uhf stuff.
>

Which totally sucks. The FCC at ONE TIME wanted distintive callsigns for
class of license. Now it is too much work to bother with. What a joke they
are.

>>
>> As a matter of fact the FCC once considered the W/K prefix "prefered

So what? having a old K8 means he has a original issue K8 call. You don't
seem to comprehend that what was this and what is now ain't no where near
the same. All there was back then was W and K calls, followed by WA, WB,
WD, then a re-issue for a while, then the alphabet soup we have today.

>>

Well, President Bush said "paki" once a couple years ago, out of naivety,
so why can't everyone else?

These are certainly not the good people that I first met when I became
a ham. The trouble with amateur radio started with the advent of the
no-code license. People began entering the service that did not
worship at the altar of St. Hiram, and did not kneel and kisst the feet
of Extras.

I don't know about all area's but I can say this, for the 8th
district...circa summer of 1961 they did indeed re-issue K calls. I
received KN8BHH, my friend received KN8BBL, another friend received KN8DEN,
etc. however just a month or so later another group of buds received WN8
which turned into WA8 calls. Go figure.

They are still limited to getting a call that is limited by their license
class. Technicians were assigned 1x3 calls until the sequentially available
1x3 calls ran out. That some now choose to get a 1x3 vanity only means that
they are getting a call that they are entitled to by license class.

The FCC could have issued N calls back then if they had wanted to. The block was assigned to the US.

There's no "alphabet soup" crap today. The call sign eligibility is the same as it has been since they initiated the 5 level license class decades ago. We have the same call sign eligibility today as then. The problem is that a lot of call signs have been "used" and so they went to the next available block. Ws were used first, then Ks, and then Ns and then As.

Today no call district has 1x3s available for sequential issue (except perhaps for some of the special territories). In addition 1x2s and 2x1s are no long available for sequential issue. Why? They have all been issued. The only available ones are those that have been returned to the pool by lack of renewal by the licensee for whatever reason. It will not be long now before the last block of Extra class call signs (2x2 beginning with AA - AL) is used up in the sequential system. The only reason it hasn't is that a lot of people are keeping their old call signs instead of getting new ones when they upgrade.

If someone comes into a license session today with no license and passes the code, Tech written and General written all in one sitting, he/she will receive a 2x3 call. Yes even a General will receive a 2x3 if it is a new issue. To get a call "reflecting his class", means that the new General has to search for vacated calls and find one available and get it as a vanity.

I kept my original call sign when I upgraded to advanced and then extra as there were no 1x2s left in my call district. I didn't like the 2x1s or the 2x2s.

It is a term for someone of East Indian descent. My East Indian friends from the Caribbean and Europe, some of the many generations, take great offence to it. It is derived from Pakistan, which is a mostly a Moslem country. Indians tend to be Hindu. So it's a combination of wrong country, wrong religion, as well as used by others who aren't part of the India/Hindu - Pakistan/Moslem wars and conflict as a direct insult. There is zero tolerance for it in schools here for instance. Perhaps there are no East Indians where you live.

No offense to those who live in other countries, those who are from other countries living here, etc. BUT, John S., when the job loss is in your household, the frustration will be quite evident in you, as well, I am sure. I can logically figure out that it is not the "other peoples'" fault. However, the emotion of losing a job, and sometimes just shy of retirement, many times after long, long years at a company, is quite overwhelming and leaves one short of "feeling friendly."

Those who are interested, here's a link to a radio program about Indian call centres and the social conditions that bring them to India.

http://www.cbc.ca/dispatches/summer2003.html

This is the text, search for India and you'll come to the real audio link:

College graduates often complain how hard it is to find a job these days. But imagine living in India, where unemployment among young people can be more than 50 percent.

Getting work on the subcontinent is kind of like staying dry in monsoon season.

Except in the southern city of Bangalore, where the CBC's Mihira Lakshman says the ability to sound like you're from the American heartland, is the key to a whole new kind of career.

Let us assume that a company makes a video game. It's pretty popular and sells a lot.

They would like to sell more.

Should they make their next game really easy? Will millions more teenagers buy the game because they can beat the game the first time they play it?

Do they want to make it so hard that it is impossible to beat?

BTW, the answer is no on both counts. People who would play video games do not buy games that are too easy to beat. Nor too hard.

Comparisons to the ease or difficulty of the ARS licensing process are invited.

Mike:

That would really be funny--if it wasn't so pathetic...
How about a few calculus questions on the test, how about having to write short story with grammar, spelling and punctuation correct. How about having to give a description of the physics of the electron-hole theory, argument at to why the theory should be considered valid, and an opposing argument on why it should be considered flawed. How about demonstrating how the quadratic formula relates to thermal physics, electrical physics--some examples of its' uses in both...
Gesus, the ham exams are for dummies... get real...
When the hams talk about how difficult the test EVER was it is a joke, the damn test can be passed by any second year college student after a day of study... you guys end up describing the size of your own mind when you do this--and still after all these years you have not figured it out--people laugh--haven't you seen them laughing before, surely you caught one or two out of the corner of your eye?
Wake up... the only reason people don't rub your nose in your own dog poop is they are not like you--they have been raised differently--they try to be nice no matter what... but there is an end to tolerance of bad behavior...

The problem which I find most is not lack of fluency with English
(in any of its variations) but lack of fluency in the subject at
hand. How can you get assistance with a PC card driver, for
instance, when the person doesn't know (or denies) that the
particular operating system which is being used exists?

Fortunately these problems don't crop up that often for me.

It is a term for someone of East Indian descent. My East Indian friends
from the Caribbean and Europe, some of the many generations, take great
offence to it. It is derived from Pakistan, which is a mostly a Moslem
country. Indians tend to be Hindu. So it's a combination of wrong
country, wrong religion, as well as used by others who aren't part of the
India/Hindu - Pakistan/Moslem wars and conflict as a direct insult. There
is zero tolerance for it in schools here for instance. Perhaps there are
no East Indians where you live.

Awww, fer crying out loud. Another Politically Correct hand-wringer steps in
and wants to play the part of a Thought Policeman.
Know what? I have lived in this country all my life and can and will admit
that I would prefer to sometimes use the somewhat generic term, Raghead. It
is succinct and to the point.
So what if THEY are offended? And who are YOU to suggest that I or anybody
else should abide by your concept of what is acceptable and what is not?

Those who are interested, here's a link to a radio program about Indian call centres and the social conditions that bring them to India.

http://www.cbc.ca/dispatches/summer2003.html

This is the text, search for India and you'll come to the real audio link:

College graduates often complain how hard it is to find a job these days. But imagine living in India, where unemployment among young people can be more than 50 percent.

Getting work on the subcontinent is kind of like staying dry in monsoon season.

Except in the southern city of Bangalore, where the CBC's Mihira Lakshman says the ability to sound like you're from the American heartland, is the key to a whole new kind of career.

Maybe they should do something about their skyrocketing birth rate.....

Hello, Kim

Dang, top post or bottom post, but who cares?

Reality is that they changed the rules and it cut my pension by around $300 per month! I was lucky, however. A few folks were just shy off 55 (one guy was 2 weeks short of 55) and they get no health coverage nor life insurance.

They pulled the plug a bit late on me. Although not big, I'm looking at over $300 per week after taxes. After working a contract job at $13.00 per hour (what a whack in pay!) and we all were let go after 3 months, I've decided to heck with it. I can live on the $300 to $350 per week. I've only a few years before Social Insecurity and I have health insurance. I have to make adjustments, but I can pay my taxes.

I'm certain that changes will occur when enough folks get hurt. I'm just tired of banging my head into a brick wall. I read the same old tired threads and the claims that the left-wing groups lied when they reported stories. Certainly mistakes have been made, but I cannot help but note that as time goes by and more stories leak out, it would appear that some folks will just not let go of the official stance. Whether amateur radio or the current administration.

I did have a laugh. Years ago, I wrote a program which generated ladder code for a programmable ladder controller. I could do the work of 8 hours of tool engineering time in 15 minutes. A lot of credit was given to other folks. Amazingly, the program "disappeared".

I had left and then went back to that company some 7 years later. When our department was getting ready to close, I spoke with one supervisor about the fact that the programming in the controllers was terrible and I could increase production about 20% (I proved a 50% increase back in 1982). When he suggested we approach the manager I told him the truth. It wouldn't save his job nor mine. I let it go. I honestly don't care and after the requisite two years I will e-mail the code to a competitor. A foreign competitor. I generally avoid confrontation and tend to not be nasty, but in this case .... :))

Make my day.

I have generally found that the well educated are either labeled as "geeks" or "left-wing radicals". The self-righteous folks haven't seen real flack. It is about time that they did.

I've seen good old "Dave" talking about "old timers". He's off by a mile, but anyone with a ticket should be welcomed and accepted with none of the B.S. concerning license classes. There are codeless techs that can run

rings around me, and I can run rings around most of the extras. I'm not talking Morse, but I could there too.

I can assure you, anyone with a "holier than thou" attitude on one group I co-own will be gone in a heartbeat. We all have enough troubles without some idiot adding to the garbage.

Now that AOL has phased out newsgroups, Jim is posting via Google - he is free to use any name that he chooses.

BTW, have you noticed that since he began posting via Google, his language has deteriorated significantly (i.e. his posts contain the word "bulls$%^" quite frequently now - which was quite a rarity in the past..

See my comments in a previous post regarding how true character is reflected in one's posts..... :)

While they don't crop up that often for me either, I don't bother to call the help desks for the very reason that you mention. I just keep plodding along until I manage to figure it out for myself.

While they don't crop up that often for me either, I don't bother to call
the help desks for the very reason that you mention. I just keep plodding
along until I manage to figure it out for myself.

Dee D. Flint, N8UZE

Agreed, Dee. I am fortunate in that I have several savvy friends who are
more than willing to assist me in my times of need. I also find it a
personal challenge to muddle through the glitches as they crop up and try to
resolve them myself. It is a great "hands-on" learning experience.
At least that is how I view it.

I guess it is a trade-off, eh? Spend two hours on the phone listening to
canned music or spend two hours figuring it out for one's self. As you said,
it doesn't crop all that often.

I'm not the lowlife.

Todd started it. Todd was told to rein in the crap from his blog
but didn't do it.

Todd exercised his "rights"...I exercised mine.

Todd got exactly what he asked for.

Good point. I should have been more precise and said that many US state governments are too quick to ship jobs overseas. An irony in all of this is that many of the social assistance programs are managed out of country. If the jobs were kept in North America, there would be far fewer people needing the services of the very people that deprived them of a possible income.

You have to admire Todd. He seems to be an unsinkable cork.
Todd fancies himself a writer, but has yet to master the use of a spell
check.
Take for example this sentence from his site. "There was junk all over
the floor and boxes stacked up ever where."

Need I elucidate?

Hello, Dan

Should be fun. I could well loose, who knows? But I'll tell you what, I hope both of us learn a bit of respect for each other. I honestly don't know how well I'll do much past 40 as it has been quite a few years - but I'm willing to give it a try. I will get your addy minus the spam catcher and explain further.

Hang on to your shorts, it might be a bumpy ride LOL

Seriously, Dan, I hope we can end this one on a friendly note. I get upset sometimes with some of the threads. I bear no ill will against newcomers nor old timers. I do hope you read what I stated concerning the 1X3 and 1X2 call signs. I was being honest there.

In any case, I'll be in touch. Wanna bet that we'll hear from Len on this one? A beer? LOL

BTW, you are right about the KN prefixes. Those became the KX3 calls. At the time, however, New York was the most populus state and the 2 district was into the WB2 calls. I've still got my original novice license issued in 1962 as WN2CJV which would have become a WB2 call. I'm willing to try and take a digital photo of it and send it to you if you wish. There are differences between districts. And I still abide by my thoughts that the average WA or WB has been licensed longer than the average 1X2 or 1X3 call simply because of the FCC and its' vanity call sign program.

All other stuff aside, when did you use land-line? How long have you been licensed? I am not trying to say I'm a real old-timer; I'm not. I am simply making the argument that due to the vanity call sign program, a lot, if not most, of the 1X2 and 1X3 calls are vanity calls. I also was WA3RJX some 6 years *after* being WB2OSP. It is a matter of the call district. If you move, you loose (at least back in the days). I was N2JH in the early

70s, given the time to renew one's license, that was some 10 years and more after the WN2CJV (or even the WB2OSP) ticket.

Heck, maybe after we get a time and frequency (and the 4 call district might be tough except for 40 meters), perhaps we can get a few others on the frequency.

I'd almost bet that Hans could wipe us both out ... but we can see .... :)

Tell ya what, if Lennie comes up on frequency on CW, I'm gonna quit right then and there!

Let's give it a go.

"Having been in college for more than 300 units, having seen English professors making uncounted typos, spelling error, errors in grammar, etc... you look like a nit picking idiot... but I think you fail to know that, and either unable or unwilling to see how others visualize you..."

How quaint. How others, most especially yourself, visualize me is of little consequence to me. I simply don't care and your thoughts on the subject are of little importance.

"I'll bet you go over your posts as if you are creating a real literary gem which will dazzle us all with your brilliance--truth be known, it sends multitudes of us to the john to puke!"

Multitudes? As in YOU? Name two, other than yourself. Oh, wait. Len may well be one of your cohorts, but he is of little consequence.

"Yes, I can see you now grinning like a damn fool, having checked the post at least three times, spell checked it, and probably have shown it to a good buddy so he gloat with you over your dynamic mind and amazing ability to put text to work... the rest of us just get ill... we quickly type our posts at 80 wpm, skip spell check and assume adults who have been to college will read them--it seems we have been wrong all along..."

Yawn. I have little need to show this to any others "so he gloat " about same. Typing at 80 wpm is commendable, if you can indeed to so. Speed is nice, but not necessary here.

"I can see you now grinning like a damn fool"

Yeah, you got me there. I am not only grinning, I am laughing.

Next?

I heard something similar said by a friend at the Legion Hall last night!
(grin)
The beer and liquor was flowing last night you see.. :)

> Since when is racism PC crap? Heard about Bosnia, Rwanda, Sudan,
Kashmir?

Yes.

Those are four countries which should have been left up to their
own devices and not rcvd on dime of Foreign (USA) Aide.
Bosnia is populated by the descendents of migrating gypsies who want to
set up a quasi-Islamic State right on Europe's doorstep. They just may
get the chance now thanks to Bill Clinton's intervention in the former
Yugoslavia in the late 90's. Bottom line is that country and it's neighbors
were much better off under Tito who kept them in order with an iron rod.
When he kicked off you saw Yugoslavia go right back to it's pre - WW-I
borders and the conflicts of the turn of the last Century flared up again.
This area has been a historic breeding ground for hotheads anyway going
back several hundred Years.

As for Rwanda and Sudan, here you have a classic case of religious fervor
mixed with a climate and landscape not unlike the moon (albeit hot and dry)
and a race of people who breed like hedgerow rabbits. Anyone with even a
partial working brain can see this is a powderkeg just waiting to go off.
There's too damm many people in Africa anyway, overpopulation run
amuck with rampant Islam and corrupt politics, so you can be sure that
Mother Nature is going to do her best to cull this herd for sure! She's
doing
it right now via HIV, desertification and climate change. Sit back and
watch
M.N. in action kids! Amazing how she can clear off the land of the human
locusts and yet leave the raw materials intact eh? Sort of like a Neutron
Bomb
in slo-motion....

Finally we have Kashmir! A disputed border region being roe'd about by
Pakistan and India. Two countries who have two greatly opposing religions
and a population that breeds like field mice...and best of all...THEY BOTH
HAVE NUCLEAR WEAPONS!! Now this is a comedy act we really need

to watch very closely folks. I will never forget seeing the video of ignorant and
inbred pakistanies a few years ago, riding atop a fake nuclear missile prop in a victory parade urging their Govt. to launch a real one onto Deli or Bombay.
This was the 'paki' version of "Dr. Strangelove or How I Learned Love The Bomb" with Dr Kahn playing Peter Sellers. Here you have a group of people who would love to see parts of India glow with radioactivity, and yet they forget
that the fallout would rain down on Pakistan afterwards! (talk about nuclear
Darwinism!) The Indians are not much better, they believe in 1000 different gods and are not worried if they get nuked because they will come back as a monkey or a cow or some other mutated form of life. One wants to nuke Krishina for Allah....the other wants to nuke Allah for Krishina....GO FIGURE!

Know what I say folks...? LET THEM KILL EACH OTHER OFF !

There are too dammed many people on this Planet anyway, and the masses of candidates for a mass-culling are, for the most part: stupid, easily led by
religious craptrap, uneducated, and baby-making machines. In short an army of biomass which is incapable of intellectual advancement, which thus must advance itself via sheer numbers by rampant biomass and unrestrained breeding.
A living cancer on the face of the planetscape. Yes, let them kill each other off
via Mother Natures help. She's already giving us a warning that the planet's reserves
of petroleum products have reached their peak (look up 'Peak Oil' on google) and
it's all downhill from here folks. The 3rd extinction has begun and it has been caused
by HUMANS!

In closing , let me remind you of the words of the Georgia Guidestones:

1. Maintain humanity under 500,000,000 in perpetual balance with nature.
2. Guide reproduction wisely - improving fitness and diversity.
3. Unite humanity with a living new language.
4. Rule passion - faith - tradition - and all things with tempered reason.
5. Protect people and nations with fair laws and just courts.
6. Let all nations rule internally resolving external disputes in a world court.
7. Avoid petty laws and useless officials.
8. Balance personal rights with social duties.
9. Prize truth - beauty - love - seeking harmony with the infinite.
10. Be not a cancer on the earth - Leave room for nature - Leave room for nature.

They say it all !

I didn't "snitch toad out" for his newsgroup activities other than his threats and profanities which I received via e-mail. Not all of the stupid letters I received were via his blog. The headers tell the tale and THAT'S what got him into trouble.

As for the suggestion that Todd was not responsible for the threatening letters, I look at it this way...Even if he didn't send some of them, he encouraged and incited others via his blog to act irresponsibly.

I asked him repeatedly to stop using my name and callsign on his blog, and he just repsonded with more threats and profanities.

Also, I am obviously NOT the only person who's been busting Todd's chops with his ISP.

He played with fire...He got burnt...Oh well...

Perhaps, Lennie, if certain mischevious scumbags weren't
>>looking<< to "bruise" people there wouldn't be such a propensity to be as defensive.

Such as the deceitful and misleading barbs YOU disseminate in this
forum.

Guess you now think it's wrong for one to defend one's self?

The problem didn't start with the No Code test...It started almost
20 years before that with the influx of 11 meter operators via the Bash
Book route and the subsequent codification of the "open pools".

I disagree. Most of the 1x2 and 1x3 calls seem to be "original issue" not vanity calls. I know only a handful of people that have gotten vanity calls and they have had a tough time finding a call that they liked as there just aren't (and haven't been) that many of the calls available.

> rarity in the past..

Len has made a habit of posting things about me that are simply
not true. Such as his false claim that I have tried to ban all
but licensed amateurs from posting here, or commenting to FCC.

That claim is simply false. When asked for evidence or example
of where I have done so, Len has nothing to show. Yet he keeps
making that claim, and others.

Leo, what word would be more appropriate than "bullshit" to
describe that claim? What words would be more appropriate than
"jackass behavior" to describe the actions of the person making
such claims?

You guys are pikers. Look at just some of the folks who have gone before:

>From PHC:

Sandy Beech
Paige Turner
Sarah Bellum

>From Car Talk:

Heywood Jabuzzoff
Peekip Andropov (chauffer service)
Marge Inovera (research dept)
Erasmus b. Dragon (really overworked staffer)

Even from QST:

Noah Q. Essels (claims he has DXCC but no verification)
Lotta Chazzeez (homebrewer of many small projects)
Harry Uppensine (makes very long CQs)

And many more. Lots more of course, those are just the ones I recall offhand.

Sorry Brian.

On my Daughter's Grave, Brian, I am not, nor do I know who,
"Laughing at Lennie" is.

That one we'll have to figure out for ourselves.

Steve, K4YZ

Ah, yes, the "Riff-Raff" theory. Almost 20 years ago I used the ARRL's
"Now You're Talking" and the ARRL's non-Farnsworth Code tapes to enter
the amateur radio service via "open pools" testing.

It will generally depend upon the time of day that you are calling in for
assistance. Companies route their calls to the area of the world that is
"awake" when you are calling.

Mind everyone on ths thread: I keep seeing posts as though it is only
computer help that has call centers in foreign lands. That is incorrect.
There's a huge swing in the United States to outsource any--*any*--telephone
contact to foreign "BPOs" (Business Process Outsourcers). That means any
customer service you can think of, is more than likely being answered
overseas. Why? It's not that call centers here in the United States can't
be personed (being politically correct) 24-hrs a day. It's the bottom line.
It's supposedly cheaper to have the work done overseas. I doubt that it is,
given frustration levels of customers and, more definitely, the long term
effect of taking all that kind of work out of this country, putting people
out of work, and ultimately destroying your own customer base by not being
able to sell product. However, the short-term, money hungry, uncaring CEO

and affiliated BOD who are lining their pockets with their savings don't care.

In my company, MANY were within 6 mos. of eligible retirement age. Company was asked, "why". Response: "it had to be done sometime, 'it's just business.'" So, employees take note: forget about dedication to job and customer, "it's just business." And, that attitude is quite evident in customer service these days. You would probably believe how many people I know who complain all the time about those "automated" response systems when you call for help these days. Whenever I get someone on the phone, I tell them that it's just miserable. Know what response I get? "That is the way business operates and it is considered a Best Practice standard." Not even a: "I will log your complaint." Know why? Because we, as consumers, accept mediocrity and that becomes the local conversation when we gather with friends. We talk about it, but we do nothing to try to resolve it. Uh, by the way, I'm right in there and, whenever I try to think of how to battle it, I can't come up with a solution because it's so ingrained in business practice that EVERYONE is doing it.

Get this. Our adventure began a little over a year ago. Company "migrated" all customer ops (because that was not their "core business"

[huh????????!!!!!!!!!!!!] to a firm where we are all now "contractors." BUT, previous employer holds out severance package IF employees are terminated within 18 months. We should have all figured out then that we were all going to be terminated within 18 months...LOL Many are gone, the rest are just waiting. Bad business, just can't convince and bigwigs of it because, of course, their pockets are heavily lined with the savings.

>

Refer to my upper paragraph on that. In another thread, "Indian Call Centers" I think it is, I just posted that companies who are exporting technical and customer service jobs don't realize that it means in the future, they won't have customers to buy products. And, why should our youth look at the career path of technology because it's all being "outsourced." We already have a critically severe shortage of doctors, nurses, and medical specialists (granted, not because of outsourcing but because--it is said--our up and coming youth see the long hours and little money and don't want to do it) coming up in the next ten years. I've already heard many, many children of career technology parents being counseled NOT to enter into the computer/technological because their job function will not be there and/or will eventually lead to being outsourced.

Heh heh...the gist in the company I work for is, beginning many years and into recent years, frustrated programmers and data folks--who were confronted with the silo attitude whenever they would request access into a system--began writing their own little "additions" and subroutines to existing processes. There are, literally, boxes that whir and run and no one has a clue to what they are doing. Why? Because the person is long gone and do ya think they'd be interested in helping out? LOL Anyone who thinks their systems are pristinely designed and operated, with "one path" philosophy...are in a la la land.

>

I can nearly guarantee you that they won't care. Think about it. The proverbial CEOs makes millions the first year in a company, and has not one iota of plan to stay there for the long-term. The BODs are the same way. The only place it needs to begin to show that people care is at the customer level. And, once again as in politics, we've been fat, happy, and stupid. And, the problem we now face, in politics and in our workforce, seems insurmountable. I'm sounding terribly gloomy and doomy...but I know at least you will understand what I'm talking about.

Yes, I certainly have seen the opinion you have expressed
here--expressed here before.
However, your very words prove of you telling a lie, if you did not care
about nit picking, character attacking and finding fault with others
which differ from your thought--you would NOT support those who do...
Frankly, that is the whole point, we don't care what the heck you
think... it is you who feel you must control others thoughts--this is
what I am pointing out to you... you still don't get it, do you?

I am just explaining to you how transparent it all is, just in case you
would not want to be so obvious--however, it may indeed be beyond your
capabilities... but yes, it is irksome to have someone so obvious they
can be "read like a book"--while at the same time, you see them
chuckling to themselves like an idiot--thinking they have sure pulled a
fast one on you, and completely unaware you are gazing back at them as
if they were an idiot!

Warmest regards,
John

Kids in that timeframe lived in the remnants of the old "children
should be seen and not heard" mindset. Unless some publication was
somehow directly related to school classwork it was written for adults.
Particulary if there was any technical content and the ARRL followed
suite.

> The license requirements
> *weren't* reduced (as NCVEC and others want to do) to make
> the tests easier for kids to pass.

Of course not, no more so than the state made it easier for kids to get drivers licenses. For the same underlying regulatory reasons.

> The "Beginner And Novice"
> columns weren't aimed at teenagers or any other age group.
> And that may be a big part of what made them so attractive
> to kids!

Nah, never entered our minds. Ham radio was an adult hobby and we accepted it. Period. We were used to having to read at the adult level when it came to technical publications, there were no options, we didn't know the difference. There were beginners publications in some hobby fields but I don't remember any in ham radio and they were all written for adults. In another direction kid hams were a tiny and poverty-struck book and magazine market, there's no money in a market like that so nobody wrote for specifically for us. In yet another direction all the kid hams I knew had adult-level reading skills by the time they were twelve or so and wouldn't have bothered with being spoon-fed kiddie sorts of writings even if they were available.

I agree 100%, Kim. The key part of what you wrote is "short term".
Those in charge cannot seem to understand that they
are driving their companies under in the long term.

> However, the short-term, money hungry, uncaring CEO
> and affiliated BOD who are lining their pockets with their
> savings don't care.

It's even worse in some ways. Many of them are hired with
obscenely lucrative severance packages as part of their
packages. So if they do a "good job", they get big bonuses,
and if they do a bad job and are sacked, they get an
enormous (as in tens of millions) goodbye.

Puts a new twist on "win-win".

Look at the woman (just to show it's an equal-opportunity
game for those at the top) who ran Hewlett Packard into the ground for

a classic example.

The thing that's most classic about it is that the top dogs
claim they need to pay those high salaries and benefits
to get good people. Yet somehow that doesn't translate to the
rank and file.

--

Historic note: Way back in Model T days, Henry Ford was
criticized for paying his workers $5 per day, at a time when
that was really high wages for skilled manufacturing workers.

His reply was something to the effect that he wanted his workers to be
able to afford the product they were making - that it
didn't make sense to be producing something the average working
person could not afford to own.

Yup. That's me, fag lamer Roger Wiseman, AB8MQ.

I live at 610 Glen Haven Avenue in Glendale, West BY GOD Virginia.

I am big, (5 foot four inches) I am tough as nails, and I have a mouth twice as foul as any septic tank you have ever smelled.

I am a badass. I have been booted off more ISP's in two years than most of you have had in a lifetime. I am a lean, unclean, fighting machine.

I can chew nails for breakfast (gets the smegma off my teeth) and sing Layla at lunch.

And as for that smartass who keeps sending me shampoo samples in the mail. I don't care what you do, I am not going to wash my hair until I feel good and ready.

Got it?

>a ham. The trouble with amateur radio started with the advent of the
>no-code license. People began entering the service that did not
>worship at the altar of St. Hiram, and did not kneel and kisst the feet
>of Extras.

Well, from my point of view, the change started a lot earlier.

The movement to implement a no-code amateur license class
was already underway at least a decade prior to 1990. The
olde-tyme hammes "dismissed" such riff-raff haughtily,
tried to bruise no-coders' knuckles with code keys and
trumpeting like King Kong (complete with chest-beating) or
the disdain of a sneering (but clumsy) Basil Fawlty in a
(funny) English sit-com.

The Ham Lifestylers created themselves around the 60s when
there was left-over money to spend for fancy radio toys and
time to do "radio pioneering" in "DXpeditions" and the
self-styled "radiosport contests. They were the "Greatest"
according to the ham publications, sort of like radio
versions of Cassius Marcellus Clay after his name change.
[look at Clay/Ali now...]

"Radio" in itself can be very fascinating in and of itself.
But, "radio" is really just one form of electronics and
cannot, nor should not, be rooted/shielded/isolated into the
old analog ways nor communications modes of six decades past.

One problem, quite evident in here, is the Lifestylers trying
to force everyone into THEIR way of thinking/doing as if that

were the "voice of the amateur community." There is NO real voice, not even in the mighty national membership organization of hams that "represents" (according to them) only 1 out of 5 U.S. amateur licensees. It is THEIR little clubhouse and they are supremely, arrogantly intolerant of those who do not acknowledge THEM as the "masters." Their feet MUST be kissed and all MUST respect them...they keep telling others that in so many different ways. THEY are "superior."

What is worse for the HOBBY is the attitudes of the Lifestylers is clearly evident to all those outsiders who greatly out-number them. The Lifestylers fear their Way of Life is Threatened by "mere hobbyists" and that fear makes them blind to their own actions and attitudes. They remain resolute and arrogant, elitist in their self-styled "superiority" and cannot recognize THEY are the greatest danger to the hobby.

>Sad, isn't it - Jeez, it's just a hobby!

"Radio" is a rather fascinating field of activity. While not
all find it so, it intrigued me so much I made an abrupt
career choice to make that my work in addition to hobbies.
I found out that MOST of my contemporaries NEVER BOTHERED
with a "ham license" before entering electronics.

To see some of the ham devotees in here, that was "wrong."
I was supposed to "get a ham license FIRST" according to
one...that would "show my dedication to the ham community!"
Er, the "ham community" didn't "recruit" me and didn't

identify themselves individually; they loomed as some giant
spectre in the moral aphorisms of the mighty League. "Do it
THIS way or you'll go blind...'can't I do it until I just
need glasses?'" :-)

>Now that AOL has phased out newsgroups, Jim is posting via Google - he

Interesting. :-)

I rather like the hypocrisy displayed by others...especially
one who is decidedly not Hebrew nor Central Europe ethnic
who uses a four-letter Yiddish nastyword meaning "penis head."

Many years ago Playboy magazine published a funny, funny
version of "Mother Goose" stories with selective use of
octothorpe [#] "censorship black-outs". An example:

Little Miss Muffet ### on a #######,
Eating ### ##### and ####,

WHICH "fan club?" :-)

I've found that I must restrict my actions for environmental
reasons. There's so many balloons of hot air here and there

that, though puncturing the gas bags is great fun, releasing
all that hot air may increase global warming!

>a ham. The trouble with amateur radio started with the advent of the
>no-code license. People began entering the service that did not
>worship at the altar of St. Hiram, and did not kneel and kisst the feet
>of Extras.

Well, from my point of view, the change started a lot earlier.

The movement to implement a no-code amateur license class
was already underway at least a decade prior to 1990. The
olde-tyme hammes "dismissed" such riff-raff haughtily,
tried to bruise no-coders' knuckles with code keys and
trumpeting like King Kong (complete with chest-beating) or
the disdain of a sneering (but clumsy) Basil Fawlty in a
(funny) English sit-com.

The Ham Lifestylers created themselves around the 60s when
there was left-over money to spend for fancy radio toys and
time to do "radio pioneering" in "DXpeditions" and the
self-styled "radiosport contests. They were the "Greatest"
according to the ham publications, sort of like radio
versions of Cassius Marcellus Clay after his name change.
[look at Clay/Ali now...]

"Radio" in itself can be very fascinating in and of itself.
But, "radio" is really just one form of electronics and
cannot, nor should not, be rooted/shielded/isolated into the
old analog ways nor communications modes of six decades past.

One problem, quite evident in here, is the Lifestylers trying to force everyone into THEIR way of thinking/doing as if that were the "voice of the amateur community." There is NO real voice, not even in the mighty national membership organization of hams that "represents" (according to them) only 1 out of 5 U.S. amateur licensees. It is THEIR little clubhouse and they are supremely, arrogantly intolerant of those who do not acknowledge THEM as the "masters." Their feet MUST be kissed and all MUST respect them...they keep telling others that in so many different ways. THEY are "superior."

What is worse for the HOBBY is the attitudes of the Lifestylers is clearly evident to all those outsiders who greatly out-number them. The Lifestylers fear their Way of Life is Threatened by "mere hobbyists" and that fear makes them blind to their own actions and attitudes. They remain resolute and arrogant, elitist in their self-styled "superiority" and cannot recognize THEY are the greatest danger to the hobby.

LenAnderson@ieee.org

Len. Question.

What is your callsign?

Why I do "On the Domestic Front"
by Lloyd Davies - Time-Lord
I enjoy doing my talk show. I enjoy the Radio hobby. My
interests in
Ham Radio are kinda a "escape" from my own personal hell.

I will be 30 years old in less than a month. I look at my life
as a
life that has been a lonely one.

I enjoy the "attention" I get from doing my shows and my posts
calling
myself a time lord. I suffer from depression alot of the time.

Just please try to understand me. That is all.

>
>I see no evidence of that.

There are many, many, many forms of belief systems. Few of them
are "dirty." But that isn't what Robeson is trying to convey
here. Robeson simply wants to insult me anywhichway he can.
That's nothing new since he's been trying and trying and trying
to do that for years. [he's become very trying] He fails in all
attempts.

>> He has "belief systems" too, but they don't seem to include
>> honesty, trustworthiness or strength of character.
>
>Some people who claim to have all of the above are creeps.
>
>"Lessee....430."

Brian, the word "creep" is far too much an understatement to
describe Robeson's behavior in here. :-)

>> Gee, Brain...You got the point but didn't even knoiw it...
>
>> There's no "rule"...Yet Vippy seems to think there is.
>
>> Good for you.
>

>I see no evidence that Vipul thinks there's a rule. I only see
>evidence of you thinking there is.

NONE of us can see into Stebie's thinking processes. I doubt
anyone would want to! :-)

It must be a strange, twisted place.

>> > > > They are often older, and male.
>
>> > > So...Shall we implement euthansia and castration if a licensee

>
>Is that a threat?

Tsk, tsk. Gonad the Librarian flexes his mighty muscle and
pretends to be ruff and tuff. :-)

If only his medical supervisors knew how he used implied PHYSICAL
HARM and threats of mutilation against others. Tsk. That just adds
to a series of hypocritical boastings he's done while claiming to
be a helper/savior(?) and "saving lives."

>> > So amateurs have terminology and -don't- like to use it? Are you
>> > agreeing with Vipul or disagreeing with Vipul???
>
>> I am humiliating Vipul.
>
>You da man!

That poor soul tries humiliation on everyone who disagrees with him.

Somehow he never, ever learned about "the inherent good will of
amateurs" as mentioned by the FCC. Tsk, tsk. :-(

>> HE seems to think that there's some black undertones to Amateurs
>> using subject-specific terminology.
>
>Amateurs are encouraged to use plain language in every emergency

>> > explanation.
>
>> No expalnation is necessary.
>
>More "lingo?" Quit using big words that you don't know what they mean.

Maybe Stebie knows the call sign prefixes for the Expal nation?

He might "ahve" that in his wallet...

>> From what demographic do you get your data?
>
>Why did you drop "Lessee....430" in one of your posting right before
>the Dayton Hamvention? Were you planning on stopping by my home while
>you were travelling in Ohio?

"Steve and the Boys" were looking for "action" and maybe found
some in seven other places...

>>I am basically conservative in my politics. I
>> am a former Paramedic and and presently an ACLS Nurse. I am a licensed
>> aviator.
>
>> Not to mention a 30+ year licensed Amateur.
>
>Paramedic and Nurse is a belief system? Aviation is a belief system?

Civilian Private Pilot...who thinks he is "Pilot In Command"
when sitting right-seat in a two-place single-engine general
aviation aircraft! Yup! That be BELIEF SYSTEM stretched right
out past the breaking point. :-)

Mebbe Stebie got "command pilot wings" to wear on his patch-
adorned flight suit? He be "Pilot In COMMAND," very important!

Tsk. Nursing and Piloting don't directly involve radio
communications...and they certainly don't get into radio
technology of same.

>> > > What was YOUR point?
>
>> > What was your point in saying, "Lessee....430?"
>
>> What was your point in "Somalia", "unlicensed devices", "ARES",
>> etc etc etc?
>
>Why can't you answer a question about you dropping my house number into
>one of your posts prior to the Dayton Hamvention?

Stebie got CAUGHT, can't bring himself to admit to making
nastygram in here...tries misdirection through attempts at
other personal insult. Tsk, tsk.

>I publically acknowledge that Steven J Robeson, 20WPM Extra is not a
>good Amateur.

Brian, I disagree. I say Stebie is Good for nothing...

>> > > Lennie doesn't accept ANY of us...
>
>> > Not true.
>
>> He doesn't. He talks nice to you because of your public expression
>> of "admration" fro him in the face of copious evidence that he's a
>> chronic liar.
>
>You're a chronic liar.

An' he no spell real good, either...

Poor Stebie is only "speaking" for his many personalities.
NOT for all of amateur radio.

>> > > There is no one person, group, organization, entity or "belief
>> > > system" that dictates what makes a "good ham".
>
>> > Not according to Larry, Dick, or Kelly.
>

>statement.

Truism. QED.

>> Who are "the", Brain? (I know you meant "they")...???
>
>Those who feel they have to agree with ham beliefs, or at least play
>lip service to it or else feel the scorn of the hard-boiled hams.

More truisms. QED.

> Lennie's never availed himself of it.
>
>Nor have most Americans, even those who are highly skilled in radio
>communications and engineering.

Poor PCTA Extras of the Double Standard, they very outnumbered.

>I just can't understand why you would post my house number prior to the
>Dayton Hamvention unless you planned on stopping by while you were in
>Ohio.
>
>Were you planning on stopping by? Didn't you have something to "teach"
>me?

"Steve and the Boys" got their KKK costumes dirty, had to
find a free laundromat to wash them. They tried washing
in stream but EPA fined them for polluting the water. That's
why "Steve and the Boys" couldn't get to your house in time.

Ho hum. Another "hostile action" for the Kode Klucks' Klan.

>Tell ya what, if Lennie comes up on frequency on CW, I'm gonna quit right
>then and there!

Start packing. Pick up last check in Accounting Department.

Fort Monmouth, NJ, a June afternoon in 1952, basic radio skills
for Microwave Radio Relay MOS at the Signal School in a general
purpose school building: Small 6AG7-6L6 MOPA transmitter on
about 7.5 MHz, crystal controlled, CW only with a "straight key."
Measure RF power into "dummy load" (light bulb), then connect
to wire antenna and "load up," see difference in meter readings,
hear keying from instructor's simple five-tube receiver. Hear
instructor cuss out one for "sending nasty words on-air" with
morse key. Sent "CQ" for "keying," nice easy pattern to beat
of characters already memorized before service. Maybe 20 Watts
RF output. Measure frequency with BC-221. Adjust crystal
oscillator for exact frequency and see range of adjustment
possible (not much). Satisfaction on getting very close to
"on frequency." [not on ham band frequency but still legal
for Signal School]

53 years later the boat anchor afficionados are still "peaking
the grid, dipping the plate" on their glow-in-the-dark PAs.
Ho hum. No big change.

Improvement: Modern luggage much, much better. Easy
handling, better packing.

>Let's give it a go.

Good luck on your new whatever. :-)

Ahem, "almost 20 years ago" would be about 1985. Class D CB
was created in 1958...FORTY-SEVEN YEARS AGO. 27 years in
between are unaccounted for in Stebie's statement.

"11 meter 'operators?'" The original "11 meter" CB users
required a license but never required any test. USERS.
Absolutely NO written form of "radio knowledge" was

required of any USER.

"Open pools?" There were "Q&A" books published before 1956 on ALL FCC written tests. BEFORE the Dick Bash publications. That was way back in history when ALL the FCC radio regulations were supplied as three-ring binder, loose-leaf pages.

Today's COMPLETE questions-and-answers pool is generated by the VEC Question Pool Committee. Those answers have three times the number of WRONG answers as there are correct ones. The VEC QPC is composed entirely of already-licensed amateurs. Those hams who bitch and moan about the "open" pools can go and pish all over their ham VEC QPC "brethren" about the questions.

The FCC requires only a MINIMUM of ten times the number of questions for each class' written tests. There is NO LIMIT on the MAXIMUM number of pool questions. The FCC doesn't even require the KIND of questions...that's up to the QPC to determine. Given the electronic distribution of text and image material, there's not much limit on a QP size and that could have 100 times the minimum number of questions. The "riff-raff" aren't going to "easily pass" by "memorizing" ALL those questions and the ONE correct answer out of four.

Various electronic industry groups have stopped keeping accurate tabulations on the number of "CB radios" either imported or in-use. Some time in the past, an EIA (Electronic Industries Association) estimated about five million CBs "in-use." That way outnumbered the number of oh-so-legal radio amateurs licensed at the time. Before the FCC stopped publishing databases on PRIVATE land, sea, and mobile radios NOT on ham bands, NOT on CB, those were an equal number to the total of licensed radio amateurs. There are about 100 million cellular telephone handsets in public use (estimated from Bureau of Census reports for 2003 on cell phone subscriptions) and the June, 2005, issue of the IEEE Spectrum (membership magazine) states that China has 300 million cell phones. Radios. Small ones. Not even counting the FRS and GMRS handsets. NONE of those requiring mighty test-taking of morse code proficiency.

All of those non-ham radios are in use by "riff-raff?" Dick Bash is "responsible" for all the Q&A books published in the 1950s? Yes to all implies the mighty Stebie, "speaker for all hams and the 'ham community'."

"Pbthpthththth" says Bill the Cat. Hear the Opus.

Hello, Dan

That you may also have mis-read what I was saying. Before vanity calls (incentive licensing was in the 1960s), you could be certain of an old timer by the callsign. You could not be positive of a newer type call because if you changed radio districts, you were issued a new sequentially assigned call.

This is why Wayne Greene operated as W2NSD/1 for years. I don't know if he owned or licensed real estate in New York to keep the W2NSD call, but finally was able to keep it for his new QTH.

W2NSD is quite some time after a 1X2 call and Wayne goes back a *lot* of years. He got his 50th (or was it more than 50?) year membership pin from

the ARRL back quite some time ago. I subscribed to 73 about 10 years ago, so it may have been in that time frame. Assuming he did not get his license at the age of two or three, plus quite a few years between the 1X2s and W2NSD, I would suspect most of the original 1X1s are long SK. I suspect a fair number of the original 1X3s are also gone. Perhaps not the majority, but a fair number.

I make this statement only by personally knowing some of them and having an idea of their age. The ones I knew are all SK.

Ooops. I do know a 1X2. He was WA2SEY and obtained a 1X2 via the vanity call system. The only one I know is through the vanity call system. Ooops, wait. I've heard a couple on the air locally. All vanity call signs.

Going through posts in one group, I've seen a lot of folks grabbing the 1X3s via the vanity call system.

Due to personal experience, I suspect that a fair number of 1X3s are vanity issue and am convinced that most, if not all, of the 1X2s are vanity issues.

Certainly, there are still a large number of 1X3s still around with a non-vanity issued call. However, I suspect that in the 2nd district, these would have run out sometime around 1959 or 1960. This sets a lower limit on age of around 50. This would be for a child who obtained his or her ticket just before they started with the WA prefixes here. Someone obtaining their ticket then as a teenager should be around 60. You don't have to go too far back through the K2XXX to approach W2XXX and now you're likely looking at someone 80 years old or more. There were fewer amateurs then and callsigns weren't issued at the machine-gun rate they were some decades later.

I mentioned K2BRE. Were he still alive, he would be in his mid to upper 80s. And that is still after the W2XXX calls. You expect me to believe most of the 1X3s are 80 years old and older?

How many hams are around that are 90 years old?

This is why I suspect a fair number of the 1X3s are vanity calls. Of course, other radio districts may not need go back nearly as many years to achieve the 1X3s.

My first post was to point out that the WA and WB prefixes indicate folks that are approaching 60 years old. I doubt any were obtained via vanity calls. So, I suspect these folks have been licensed well over 40 years. I cannot assume that with a 1X2 or 1X3.

Oh, I almost forgot W2OY. He's been SK for many years now, but other lids have jumped right in to fill the gap.

Hello, Dee

I agree; I don't care for the 2X1s nor the 2X2s. That said, I wasn't going to pay money to get the WB2 call back and the N2JH was taken via the vanity system. There was a brief period when extras were allowed to select a call in the N series and I took that after leaving Pennsylvania as WA3RJX.

My point continues to be that you can only make assumptions on the WA and WB prefixes. New calls will likely be a 2X3, but after WA and WB. No one would pay for them and they are likely all licensed over 40 years.

Which came first, WA2SEY or W2AV? Well, WA2SEY took advantage of the vanity system and is now W2AV. So that one is a push, except that WA2SEY has been vacated.

Dontcha just love the alphabet soup? Perhaps we could all get a w, k, n, or a prefix depending upon class licensed followed by the numbers indicating the first license issue date, followed by three letters. Since I doubt enough folks would get their license on the same day in the same radio district to overflow the last 3 letters, it would leave room for vanity by choosing your initials.

I can see it now - de W050262JRH K

LOL.

73 from Rochester, NY

>station-only licenses

That's simply untrue, N...@aol.com. Military "calls" are
assigned by the MILITARY. FCC has NO legal jurisdiction
over USA military OR government radio.

>Note also that effective April 15, 2000, new Novice, Technician Plus or
>Advanced licenses are no longer issued, and that all existing
>Technician Plus licenses are being renewed as Technician.

An absolutely IMPORTANT clarification to obscure the
fact that no-code-test Technicians are condescendingly
sponged into the MORSE-TESTED totals.

Here's the totals of ALL AMATEUR licenses as given by
www.hamdata.com as of 5 June 2005, with "delta" relative
to those same classes two years ago...and the percentage
of total 2005-date licenses less 9,550 "Club" calls:

Class Licenses Delta Percentage
Technician (no-code-test) 293,613 +19,932 40.64
Technician Plus 56,161 -19,480 7.77
Novice 34,116 -8,331 4.72

General 144,802 +1,855 20.30
Advanced 82,902 -3,322 11.43
Extra 109,325 +3,678 15.13

Total Less "Club" calls 722,452 -5,668* 99.99**

* 2003 all-license totals were 736,616 or which 8,496 were "Club" calls so the Delta for comparison is 728,120.

** Percentage totals do not add up to precisely 100% due to arithmetic round-off to hundredths.

Note: "Club" calls include all the non-individual license grants.

As of the hamdata.com figures for this Sunday, 5 Jun 05, NO-CODE-TEST Technician Class licensees outnumber General Class licensees by an almost exact 2:1 ratio. [General class licensees WERE the largest in old days, no more]

Nota Bene: The total licenses for the no-code-test Technician Class, 293,613, do NOT include the "Tech Plus" total licenses of 56,161. [let's stop this foolish "lumping-together" by rather obvious PCTAs in trying to embelish the sanctity and nobility of morsemanship]

ALL license classes in the Technician (no-code-test), General, and Amateur Extra classes have the SAME grace period. If current Novice or Advanced license holders don't RETEST, they go bye-bye, get defunct, disappear from that great database.

The current percentage of NO-CODE-TEST Technician class licensees now make up slightly over FORTY PERCENT of all classes. It is obviously the most populous of ALL classes and CONTINUES TO GROW. Neglecting that singular LARGE class of radio amateurs is foolish pipe-dreaming or weird personal fantasizing.

We now return you to the regularly scheduled PCTA rationalization party in progress...

No need....I have my very first license in a file. KN8BHH, issued summer of
1961.
In fact this month (June).

There are
> differences between districts. And I still abide by my thoughts that the
> average WA or WB has been licensed longer than the average 1X2 or 1X3 call
> simply because of the FCC and its' vanity call sign program.

Your probably right Jim, now a days having a pre vanity 1X2 or 1X3 means
nothing
because every one assumes you paid for it.

>
> All other stuff aside, when did you use land-line?
Just before I went off to the military in 64. Was just getting into it, and
dropped out for many years. Haven't done it since.

How long have you been
> licensed?
As stated above, got my first ticket in summer of 61, got the general 3
months
later. Went off to the military and after traveling around Asia and Europe.
I operated
from Thailand and not quite legally from Vietnam, and of course out of
Europe in
the 70s. I took my Advanced test in mid 70s while stationed at Ft.
McClellan, got
that in Atlanta. Then went back to Germany and took my Extra there at
Ramstein
Air Base. This was when the FCC was sending teams out to do that. Amazing.

I am not trying to say I'm a real old-timer; I'm not. I am
> simply making the argument that due to the vanity call sign program, a
> lot,
> if not most, of the 1X2 and 1X3 calls are vanity calls.

You were licensed 43 years ago. Thats a old timer. Most of those older are
dead. Boy thats a cheery thought.

I agree about the call sign situation. W4XYZ licensed in 2001? What a
deal.

I also was WA3RJX
> some 6 years *after* being WB2OSP. It is a matter of the call district.
> If

> you move, you loose (at least back in the days). I was N2JH in the early

> more
> after the WN2CJV (or even the WB2OSP) ticket.

As a Novice and new General I worked so many WN, WA,WB2's I thought that
is all there was on 40cw.

I dropped my K8 call in the mid 70s. When I decided I was going to stay
here in
Bama after I got out in 79. So I had to change my callsign due to the move.

>

I remember his well. In fact I was insulted by him several times on 75 when
he slapped me around for having a K8 call.....hi.

Didn't a club pick up his call?

I said that. And I mean it. The tests today are a joke. Why you ask?
Because the questions and answers are right there in front of the person.
Sure he has to study a lot of questions. But there they are on the test. A
give away.

And lets not even talk about the CW situation.

It's NOT numbers we need, it people that respect the traditions of ham
radio and want to continue them. Its people that love ham radio and don't
want to use to to order a pizza.

Call me old fashioned and out of touch. It won't be the first time.

Is there really any need for much technical knowledge to obtain a ham license anymore? Why a need for technical knowlege when setting up and operating a station today is simply plug-an-play? How many hams constuct any equipment they use on the air any more? The most tech knowledge that might be required is maybe how to build and put up and adjust an antenna. Perhaps the test should focus more on rules, regulations and proper operating procedures. The most technical that hams get today is

knowing how many frequencies they can store in the radios memory.

As you say Dan, with the joke they use for testing today, no technical knowledge is required anyway, just memorize the answers to the questions and off you go. So maybe if the tests were geared more to regs and operating procedures, then even with the memoriziation some of it might soak in and maybe there would less cb type operating on the ham bands.

It is pretty bad when as I heard not long ago on a 2 meter reperter, "I just got my license, can someone tell me what frequencies I can operate?" Cheeese.

Even wogie wussman passed the test, that in itself speaks volumns about how easy the they are.

What "doom?" There is no "doom." There is only this subject header that's been going since May Day of 2003. :-)

The only "doom" is in the old Dragnet show theme...you know, the one that goes "doom-de-doom-doom..." :-)

All USA radio amateurs in their grace period are in limbo and don't count for anything. All the no-code-technicians have expired since they never renewed and therefore don't exist.

Excuse me...I was trying to think like the PCTA. Too hard. Gotta get more acetaminophen.

Steve is referring to 20 years prior to the advent of the No-Code
Technician, which happened sometime in the early 90's, so his reference
period is early 70's. Basically, he's saying that many, most, or all
hams entereing the ARS since the early 70's have Bashed it and are
worthless CBers.

Of course, Cecil put all that nonsense to rest years and years ago, but
some people pesrist with wrong thoughts.

... absolutely not, that is why ham radio has failed, the old guys keep trying to turn it into a darn religion with a bunch of traditions (or is that an A.A. meeting?)...
We need some young active technical people to bring some technology to the focus in this hobby and breathe some life back into it...

Warmest regards,
John

Is that a problem, Len?

I post the number of current, unexpired FCC amateur radio
licenses held by individuals twice a month. This is done
for two reasons:

1) As an item of interest to those interested in amateur radio policy

2) As a record of the trends in those numbers, accessible as long as
this newsgroup is archived.

> All USA radio amateurs in their grace period are in limbo and
> don't count for anything.

That is incorrect, Len.

> All the no-code-technicians have
> expired since they never renewed and therefore don't exist.

That is incorrect also, Len. Some have renewed, some have not.
Currently the number of Technicians is growing and the number of
Technician Pluses is declining. However the number of Technician Pluses
is dropping faster than the number of Technicians is growing.
>
> Excuse me...I was trying to think like the PCTA.

That, too, is incorrect.

I'm pro-code-test and I don't think the way you describe.

> Too hard.

Well, there you have it.

Now if they were to make a game that you weren't allowed to play until
you could beat it, your analogy would be closer to amateur reality.

Superiority based on either Morse code or the contents of the new or
old tests is shallow superiority indeed.

Thinking that such things impart superiority is even shallower.

You keep ignoring the 1x3s beginning with N. These started being issued in the 1970s and/or 1980s and finished being issued in the 1990s (for all call districts). So the 1x3s beginning with K would not have run out until sometime in that 1970-1980 timeframe.

Hello, Dan

Yes, it is a club call now. OY jumped on my frequency once on 75 when I was chatting with a station in Ohio. Guess what? The Ohio station was a good cw op and we changed to cw. At first, I tried signing 73 with him at about 20 words per minute. He came back stating cw was fine with him. Inside of 30 seconds we kept asking each other "qrq?" and rapidly cranked up to about 40 words per minute. With the q-multiplier cranked up, I couldn't even hear W2OY. I briefly turned it down to hear him moaning and groaning for us to "take those toys down into the cw band!". LOL. He didn't bither us a bot!

>
> Comparisons to the ease or difficulty of the ARS
> licensing process are invited.

Some points:

1) Amateur radio is not a video game. It's much more complex
than that.

2) Anybody can buy a video game - all you need is cash. And if you're satisfied to play older games, they can often be had for very little money, or even free.

The need for skill comes only when you go to play the game.

3) The tests for an amateur radio license in the USA have varied in the degree and types of knowledge required. (Skills are a type of knowledge). But they have never required a very high level of knowledge to pass. And the licenses have been earned by people of all ages and all walks of life.

4) Reducing the license test requirements has not brought sustained growth to US amateur radio.

The only way I could think you could reduce the number of games
sold/played on computers is to make the kids get a license before they
can have a computer. Now the test could be pretty damn complicate, but
if you require them to pass a 50 wpm typing test the numbers will
drop... now consider that they will view having to learn code for a
license as totally preposterous and you are close to getting a clue...

It is the code, not the exam...

Go back, re-read my post, and then tell me just what I wrote.

Then let me know if I wrote anything along the lines of what you just
tried to slippery-slope my post into.

Some things to point out are the parts where I am suggesting making the
tests quite difficult.

My tolerance has not been exceeded. You may wish to continue the canine
excrement comments at will.

Beating the game would be a little like passing the test.

I thought I was arguing for a middle of the road difficulty test. "John Smith" seems to think otherwise.

Of course not. The analogy is only going so far as to point out what
teenagers might appreciate in the form of challenge. It isn't an across
the board analogy.

They aren't supposed to be at a high level, AFAIAC. They are supposed
to be at an appropriate level. That is a subject to be discussed of
course. But it isn't too difficult to make "test" tests in order to
insure that the tests are about at the correct level.

> 4) Reducing the license test requirements has not brought sustained
> growth to US amateur radio.

No it hasn't. And no amount of reduction will, save for temporary gains.

Does Amateur Radio need to grow?

If so, why?

Good luck on this one now,

We agree on one thing, don't lower the standard of the test, Joe Six Pack and all his inbreed relatives already have found there way into ham radio... time to get some intellects...

Warmest regards,
John

THe code is the game, as is the written test.

Pass the code test, and you move up a level. Same with the written
test.

It ultimately is not all that different. I tend to not play computer
games, but every so often I give one that came with the installation
a try. For the first bit, I am horrible, and I can't understand
how anyone could get very high scores. But as I play with the
game, I learn the tricks that work, and suddenly I am doing
well, until I hit some higher plateau.

SOmeone looks at theory, and it looks like a really high cliff. If
they turn back then, they don't get very far. But if they keep at
it, it turns out that the first steps aren't really that bad.

Code's the same. Some of us have pointed out the feeling of
accomplishment when we were young, to have passed the code test.
It wasn't something in our way, it was something to get good
at.

The first time I picked up an electronic hobby magazine, back in 1971,
none of it made sense. If there hadn't been non-technical material,
such as Wayne Green's column in Electronics Illustrated, there wouldn't
ahve been much value in each issue at the beginning. But I kept
at it, and I learned. I thought I had four years to go before
I could get a license, because back then you had to be at lest
fifteen here in Canada to take the test. The rule was changed
the next spring, and that year or so of reading everything I could
get my hands on (three months after that first hobby magazine,
I had a membership in the ARRL so I could get QST) was highly valuable,
because I didn't have to cram to pass the test, I had a certain
level of background to get ready for the test.

I ended up joining the local club's code and theory class. It had started in the fall, but it was February when I learned I would be able to get a license that year. Kid sitting across from me, somewhat older, told me I'd not be successful, coming in so late. But then, what I really needed was the code, and the "network" the ham club supplied. I passed all but the code receiving test in May, the first month I could take the test, and passed the code receiving test in June. I didn't get the results till grade six was over, so I couldn't boast to my classmates.

Michael:

Frankly, a Jr. College degree (A.A./A.S.) is multitudes more difficult
than passing a ham exam... frankly, the exam is moot when in comparison,
even to the ability to be proficient in beating a moderately video
game... however, here in La La Land who knows...

Warmest regards,
John

No...BRIAN BURKE is calling them "worthless CBers"...

Steve Robeson said nothing of the sort.

What Steve Robeson DID say was that certain downward trends in the
Amateur Service began with the advent of the "Bash Books" and the
subsequent "opening" of the question pools.

> > "Open pools?" There were "Q&A" books published before 1956

Nice try.

Yes, both publishers printed books that closely outlined the
exams.

NONE of them were verbatim recreations of the FCC examinations. I
used the Ameco texts while studying for my General and Advanced tests.
Neither had the questions I saw on those exams.

> > All of those non-ham radios are in use by "riff-raff?"

Nooooooooooo.......

You're treated to "liar" after you've made a claim and then failed
to back it up with at least SOME form of reasonable corroboration.

Saying "My opinion is..." is one thing. That's black and white.

Saying "ARES is overblown and it's members wontt/can't respond" in
the face of almost weekly evidence to the contrary and then not
acknowledging it is just stupid.

Not at the price of continuously lowering standards - which
doesn't work anyway.
>
> If so, why?
>
All else being equal, the ARS would be well served to have more hams.
For a whole bunch of reasons ranging from more buyers and
sellers at hamfests to more points to make in contests to more
folks to ragchew with.

But all else is never equal. Simply lowering the license test
requirements hasn't helped raise the numbers.

While there's a lot of debate on the code test issue, even
though all that's left is the basic, entry level 5 wpm test,
little attention is paid to the fact that the *written* testing
was drastically reduced in 2000 for all license classes.
Previously it took 5 written tests totalling 190 questions to
get an Extra, now it takes 3 written tests totalling 120
questions. The biggest reduction took place for the Technician -
the written testing for that license was cut to about half its
former level.

"...whatever you said..." ?!?!

BBBWWWHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA
HAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHAHA
! ! ! !

YOU are the person who refered to other radio operators as
"WORTHLESS"...

And I NEVER called ANY operator, CB, Amateur or otherwise
"worthless".

Can't even keep two days worth of exchanges straight, can you,
Burke..?!?! Can't even keep YOUR stories straight!

Once again, for your edification:

"What Steve Robeson DID say was that certain downward trends in the
Amateur Service began with the advent of the "Bash Books" and the
subsequent "opening" of the question pools"

> > What Steve Robeson DID say was that certain downward trends in the
> > Amateur Service began with the advent of the "Bash Books" and the
> > subsequent "opening" of the question pools.
>
> You were the original data point that began the trend.

No...I established a time line based upon another event. I had
nothing to do with it, Brain. I "experienced" it, but was not aprt of
it.

> > > > "Open pools?" There were "Q&A" books published before 1956

> Bingo.

What "bingo"...?!?!

They did not then publish the verbatim questions and answers to the
FCC tests. FCC regulations at the time forbade it.

> > NONE of them were verbatim recreations of the FCC examinations. I
> > used the Ameco texts while studying for my General and Advanced tests.
> > Neither had the questions I saw on those exams.
> >

Nope. Not in the least. But it DOES mean I know more about radio
communications because I actually learned the material.

> > > > All of those non-ham radios are in use by "riff-raff?"

> What of the ARRL? They also publish the question pools and sell them.

I wish you could have been in SoCal the same time I was, Brain...GW flooded SoCal with these "operators" who took his weekend "radio school" and walked out with an Amateur license.

Yes...the ARRL sells them too...Point taken.

> > Ham radio was an adult hobby and we
> > accepted it. Period.

>
> 'zactly. If ya wanted to be part of it you met the standards
> for it. Watta concept, huh? Somebody tell NCVEC.

There are a few topics and individuals I generally avoid getting involved with in this NG. One of those is the unending stream of circular threads about how tough or untough the writtens are or should be or should not be simply because I happen to have very little interest in the subject.

The NCVEC can make all the noises and proposals it wants but when it's all said and done the FCC still calls the shots. If the writtens satisfy the FCC the writtens are OK with me.

My ho-hum attitude toward the writtens is based on my belief that the writtens have never had any particular effect on whether or not any individual becomes a ham or not kids included. I've never run into an example of somebody not becoming a ham because they couldn't get past the writtens - have you?? Have you ever run into a newbie licensed in recent times you consider unqualified to operate because he/she hadn't been adequately tested?

I 'spose the writtens were a bit more difficult in days of yore because we had to have a better grip on some technical topics than newbies need today to remain in compliance with the regs. A typical example being the questions we had on calculating the thermal drift of the xtals we used for frequency control back then. When was the last time any OF in this NG plugged in his/her favorite FT-243 mounted treasure to get on a freq?? SPARE me!! Hell, ya *can't* operate out-of-band today, the friggin' radios won't let it happen by FCC mandate. So there went one set of calcs we had to know. And on and on and on.

> > We were used to having to read at the adult level

OK, now I remember the book on learning the code, I had a copy. Don't remember any of the rest. The learning the code book taught me nothing, all it was good for was the listing of the W1AW code practice schedules. All the rest of it was on me, copy, copy, copy until I got it. The only youth-oriented beginners publication on ham radio which led me to actually learning anything was the Boy Scout Radio Merit Badge booklet. Add it to your list.

Hello, Dee

I thought I had mentioned that I had obtained N2JH under a vanity for extra class licensees in the very early 70s.

I have been in touch with Dan and I think we both got a surprise. He obtained his ticket only 1 year before I did and didn't get the W4NTI until some years *later*. There was a big difference between call districts as we

had exhaused the 1X3s in the very late 50s in the 2 district (or perhaps early 1960). WA was issued in 60/61 and WBs started in 1962 (at least so I believe as I obtained WN2CJV in May of 1962, which would have become a WB2 upon upgrade).

I consider the N calls to be the first of the "recent" stuff, despite going back 30 to 35 years.

It also turns out that we are both Vietnam vets.

As far as 1X3s, it would depend upon the district; as I mentioned, the NY/NJ area was done with 1X3s sometime in the very late 50s or perhaps 1960. By May, 1962, we were up to WB2CJV. WAs were already exhausted.

I did get to operate K2US at the Coca Cola pavillion during the World's Fair in 1964 LOL. So there are 3 1X2s that I was familiar with that have been re-issued (W2ZX, Russ, and W2OY, Mike are the other 2). All re-issued after the gates started opening.

At least in NY/NY, I suspect the bulk of 1X3s are re-issued under the vanity call sign program.

Hey, come to think of it, I remember Mike and Pam Kortz. They lived perhaps 1/4 mile away from me. I still had a crystal radio and had built a one-tube regenerative receiver. He had let his novice license expire more than one year before. He would have had a 1X3 if he had upgraded, but he dropped radio.

I was in 7th grade; that meant it was 1959. I assume he was licensed in 1957 or so. He would have been very near the end of the 1X3s. He was 3 years older than I. Pam, his sister, was my age.

That sets a minimum age, in my mind, of around 55 years old for an original 1X3 from the NY/NJ area. Any moves, and you loose it. I suspect that original 1X3s, although not rare, are likely not in the majority. Some folks drop out, others are killed. Some move. Original X2XXX calls are not likely in the majority.

X2XX are as common as weapons of mass destruction in Iraq. I knew a couple and they are long sk.

73 from Rochester, NY

Stebie doesn't have the word-laying savvy to express much except
contempt for those who do not agree with him.

The no-code-test Technician became effective in 1991. Going back
20 years before that would start at 1971. "Eleven meter" CB had
already existed for 13 years by 1971 and the off-shore transceivers
were already well-established in the radio market then. An early
designer-manufacturer of CB radios, General Radiotelephone Co., of
Burbank, CA, has already filed for bankruptcy and closed its
corporation and location on Magnolia Blvd; the half-completed
mast is still visible on the roof of that building today.

>Of course, Cecil put all that nonsense to rest years and years ago, but
>some people pesrist with wrong thoughts.

I know. Many of us tried to show the truth in the non-amateur radio
world. To little avail. Those who continue their myths will have
none of the truth.

For amateur radio written exams, yes. There was an earlier
publisher of Q&A books which covered many different topics,
including the FCC Commercial License written exams. I tried
to obtain one of those in late February, 1956, couldn't and
resorted to simply studying the entirety of the available FCC
radio regulations of that time (quite small in comparison to
the five-volume bound set of Title 47 today).

Irrelevant to those who need Hate Objects. :-)

Just as irrelevant to the fact that Bruce Perens, founder of
the No Code International interest group was a 20 WPM code-

tested Amateur Extra BEFORE he founded that group. :-)

Class C and D Citizens Band Radio Service is close to the half-century mark and most of its detractors (and haters) were either unborn or had not obtained any license when it was created. "Class C" exists, expanded in permissible frequencies, as "Radio Control Radio Service" in Part 95. "Class D" is in the same part and called simply "Citizens Band Radio Service."

Class A and B, on low UHF frequencies was discontinued many years before. It would have been a year-plus older than Class C and D had it continued. NONE of the original four Citizens Band classes required any user to take any written test for a CB license. Such licenses were discontinued by the FCC when the number of CB users reached about a half million or so; exact number is irrelevant with the near-present-day number of CB radios being estimated at 5 MILLION in use.

"Pbthpthhth" says Bill the Cat. Hear the Opus.

>> 4) Reducing the license test requirements has not brought sustained
>> growth to US amateur radio.
>
>
>Does Amateur Radio need to grow?
>
>If so, why?

1. In order to be at the same percentage as OTHER radio users;
the FCC regulates ALL civil radio in the USA and the
population of the USA is (keeping on) increasing. To be
competitive just to retain desired bands against all other
services requires a justification in citizen participants in
amateur radio...which means it must at least keep up with
the increasing population.

2. To retain a sizeable market for both equipment, components,
and publications aimed at radio amateurs. There are many,
many, many markets for electronics items today, much more
so than a half century ago. Manufacturers of equipment,
components, and publications desire a large enough
market to enable profit; shrinking market numbers are
coincident with reduced profit and that be a no-no.

3. Actuarial tables will show that normal life span is going
to have a greater effect on an activity where the
participants are above the median population age...which
increases the probability of earlier attrition of numbers.
[regardless of egregious boasting or frequent, vociferous
denial, radio amateurs will NOT live forever] Note:
amateur radio demographics indicate the participants are
older than the national population median age.

4. Amateur radio is basically a HOBBY. There are many more
types and kinds of activity available to the population
today versus a half century ago and that is competition
for available free time for hobbyists. Greater numbers
of amateur radio participants will increase exposure and
possible interest to the general public, demonstrate to
government agencies for favorable decisions in favor of
amateur radio participants. Note: The ARRL membership
as of the end of 2004 was only 140 thousand while the

Academy of Model Aeronautics, the USA national membership organization of model airplane flyers was 175 thousand at that same time. [source: website statements of both organizations]

5. The no-code-test Technician Class license has only been available for 14 years and (as of Sunday, 5 Jun 05) already has 293,613 licensees out of a total of 722,452 individual licenses in the USA. Had that not been available, the total number of amateur licenses would have SHRUNK by a sizeable number. The exact amount of shrinkage is unknown since it is impossible to accurately predict an alternate future. That shrinkage could, at worst case, reduced the Sunday totals to 428,839 total individual licenses, a drop to 59.36 percent. Currently (as of Sunday, 5 Jun 05) the no-code-test Technician class license represents 40.64 percent of the total individual license grants.

6. The availability of communications resources to the general public has greatly expanded in the last half century. As of the end of 2003 there were 100 MILLION cellular telephone subscriptions in the USA. [USA Census Bureau statement in early 2004] One in five families in the USA has SOME access to the Internet. [Census Bureau, same statement as for cellular telephony] Self-service facsimile machines are common in chain drugstores and office supply stores. Every government agency and nearly all military units of battalion size or equivalent have websites in the USA. Direct-dial-telephone service is available to all telephone subscribers in the USA from small towns to large urban areas; that includes direct dialing to foreign telephone subscribers. The number of "eleven meter" CB transceivers in use in the USA is roughly 5 MILLION (electronic industry estimates several years ago); "CB" has existed for 47 years. FRS and GMRS handheld, average 5-mile range, are available in consumer electronics stores/departments for less than $100 a pair (no license required for FRS radios). Throughout the USA public safety agencies have some form of non-amateur radio communications, as do utility, transportation, highway maintenance industries; the business and government radio market has long been established in the USA and major countries in the world.

As an adjunct to several items in competition for advertising income necessary to sustain some publications, it should be pointed out that the number of printed periodicals in the USA has tripled (almost quadrupled) in the last half century. Add to that the competiiton from the Internet ad markets since the public release of the Internet in 1991 and the advertising space purchasers are spread over a large number of venues.

In USA amateur radio periodicals, Ham Radio, Ham Radio Horizons, 73, and CQ VHF have all been forced to close due to insufficient income from ad sales. [QEX and Communications Quarterly, a attempt at some resumption of Ham Radio magazine content, were joined, but with marginal success on ad space sales] Note: HR, 73, CQ are all "independent" periodical publishers whose operating income is dependent entirely on advertising space sales. Some non-amateur-specific periodicals such as Popular Communications have enjoyed an increase in readership and drawing more ad space purchasers. Marketing follows trends and interests generated through advertising and adjusts product prices accordingly. Advertising, though irritating to some, is a good barometer of the "product weather."

To sustain at least the status quo, U.S. amateur radio license numbers must follow the population increase. To be competitive for both attention and product pricing, as well as for favorable regulations and new products, the license numbers must grow.

Individual radio amateurs have expressed an opinion that growth should NOT happen. Those may be looking at their own activities without regard for the overall national picture or advances in overall communications capabilities. To them everything is "comfortable" as it is. Those same "comfortable as it is" amateurs will begin to attrit in a decade or two and their numbers will drop. That will shrink the number of licensees despite the recent increases due almost entirely to the no-code-test licensees of the last 14 years. Shrinkage in numbers due to old-timers leaving must be offset by more than just that "new" no-code-test license class.

Hi, gang

Well, I am at a loss to reply to one post. The gentleman asked about the necessity of needing an rf bridge to measure the impedance of his antenna. He asked if he could simply use an ohm meter.

He is a general. I think. Maybe an extra ... :(

My honest belief is that folks should understand reactance and resistance to obtain a general class license. We aren't talking brain surgery here.

My concern is not over cw as it is really an old mode of transmission; however, that should not excuse folks from learning at least the basics of theory.

I'm still contemplating a further post on a Hammond Organ site. One guy wants to replace an impedance transformer and a tube amp with a solid state amp. He seems concerned with "reflected power". My guess is that he is a newly minted general or extra class licensee. I did reply that I'd suggest only replacing the pre-amp and leave the impedance matching transformer. It will be easier. I just don't know how to explain about emitter followers or igfets (or mosfets, whatever). If he is licensed, it should be a no-brainer at audio frequencies (only to around 6 kHz at that!), but his concern about "reflected power" really leaves me brain-boggled. Of course, he might have several miles of feedline between the transformer and pre-amp, but I sort of doubt that.

As to frequencies, anyone can transmit on any frequency. As to what frequencies the *may* legally operate on, that is another question - and one that individual should know. Or, at least have the reference materials around so he/she doesn't have to ask. It would be like going into an operating room for an operation and hearing the doctor ask "what is a

scalpel?".

Gaaaaaah! Which way to the exit?

Hello, John

You've seen technical knowledge amongst the new folks? Glad you've seen some. As to me, I like to rag-chew. Like I did with that professor from the U of R concerning theoretical physics. Of course, he's an old guy too ...

My neighbor called me again last week. Make that week before last.

Seems her computer is on the fritz. The last time she had taken it to a "tech" who simply ran the restore disk. No more partitions - and he didn't even put the antivirus nor firewall back in! It took me two trips and probably 3 hours to fix the bloody thing. Not to mention putting a second partition on the drive and trying to organize it a bit.

She got a "copy" of XP (notice the quotes - take it any way you wish). This was perhaps 4 months ago.

Well, she called (it will be two weeks this coming Thursday) and her compooter is all bogged down. I told her I was busy, but I'd call.

Well, I'd plead Alzheimer's, but obviously I remember telling her that. Maybe I'm too busy. In any case, I think she should take that thing back to the young buck that "fixes" 'em and chargers her for his time (which I did *not*).

Tell ya what, the old coots can and do learn.

Fool me once, shame on you.
Fool me twice, shame on me :))

73 from Rochester, NY
Jim AA2QA
(first licensed in 1962 and had 1st radiotelephone in 1966 along with a commercial telegraph license - but don't know anything, obviously LOL)

ps - there is no respect for technically oriented folks in this country. This is slowly being reflected by the drop folks opting for engineering degrees. Everyone wants to be a lawyer or engineer.

Jim:

I think you can "know all the answers" to the exam, and yet be a total loss of how to apply it all, and how it all "really works"...
Years ago when I was a teenager, it was at clubs and activities I picked up the "hands on", plus--even in the small town I lived in there were 3 hams! Now-a-days they are few and far between...

And, now with everyone hiding from terrorists, afraid your neighbor is a child-molester, and too busy having to make a buck (wife too these days) the new comers miss a whole lot--in the city I live in, can walk-about all day long and not have one other citizen speak a greeting--if I don't speak first... things have changed, I am afraid it is "adapt-or-die" <frown>

Warmest regards,
John
